Fundamentals of applied electromagnetics 6th edition pdf

LED Lighting Review 1-7 Facers Review 1-7.1 Solution Process 1-7.2 Facer Domain TB2 Solar Cells Chapter 2 Transmission Lines in Safar Waves 2-1 General Considerations 2-1.1 Role of Wavelength 2- 1.2 Promotional Mode 2-2 Lumped-Element Model 2-3 Transmission-Line Equation 2-4 Wave Propagation on a Transmission Line 2-5 The Lossless Microstrip Line 2-6 The Lossless Transmission Line : General Considerations 2-6.1 Voltage Reflection Coefficient 2-6.2 Standing Waves 2-7 Wave Impedance of the Lossless Line TB3 Microwave Ovens 2-8 Special Cases of the Lossless Line 2-8.1 Short-Circuited Line 2-8.2 Open-Circuited Line 2-8.3 Application of Short-Circuit/ Open-Circuit Technique 2-8.4 Lines of Length $l = n\lambda/2$ 2-8.5 Quarter-Wavelength Transformer 2-8.6 Matched Transmission Line: $Z_L = Z_0$ 2-9 Power Flow on a Lossless Transmission Line 2-9.1 Instantaneous Power 2-9.2 Time-Average Power 2-10 The Smith Chart 2-10.1 Parametric Equations 2-10.2 Wave Impedance 2-10.3 SWR, Voltage Maxima and Minima 2-10.4 Impedance to Admittance Transformations 2-11 Impedance Matching 2-11.1 Lumped-Element Matching 2-11.2 Single-Stub Matching 2-12 Transients on Transmission Lines 2-12.1 Transient Response 2-12.2 Bounce Diagrams TB4 EM Cancer Zappers Chapter 3 Vector Analysis 3-1 Basic Laws of Vector Algebra 3-1.1 Equality of Two Vectors 3-1.2 Vector Addition and Subtraction 3-1.3 Position and Distance Vectors 3-1.4 Vector Multiplication 3-1.5 Scalar and Vector Triple Products 3-2 Orthogonal Coordinate Systems 3-2.1 Cartesian Coordinates 3-2.2 Cylindrical Coordinates 3-2.3 Spherical Coordinates टीबी5 ग्लोबल पोजिशनिंग सिस्टम 3-3 ट्रान्सफॉर्मेशन के बीच इंटरस्ट्रक्चर सिस्टम 3-3.1 कार्टेसियन से बेलनाकार ट्रान्सफॉर्मेशन 3-3.2 कार्टेसियन से गोलकाकार ट्रान्सफॉर्मेशन 3-3-1 3.3 बेलनाकार से गोलकाकार परिवर्तन 3-3.4 दूरी दो अंक 3-4 एक स्केलर फ़िल्ड के ग्रेडिएंट Between 3-4.1 cylinder in shield operator radical and spherical a vector field TB6 X-ray computed tomography 3-6.1 A vector field of curls 3-6.1 vector identification of 3-4.2 Stokes of the 3-4.2 theorem 3-7 lapalsyn operator chapter 4 electrostatics 4-1 properties 3-4.2 properties of the properties of 3-4.2 properties Equation 4-2 Charge and Current Distribution 4-2.1 Charge Density 4-2.2 Current Density 4-3 Law of Coulomb 4-3.1 Electric Field Multiple Point Charges Due to 4-3.2 Electric Field One Charge Distribution 4-4 Gauss Law 4-5 Electric Scaler Potential 2 Electric capacity as a function of 4-4-5.1 electric field 4-5.2 electric capacity due to point duty 4-5.3 Electric capacity due to continuous distribution 4-5.4 electric field electric capacity as a function of 4-5.5 Poisson's Equation 4-6 conductor 4-6.1 Drift Velocity 4-6.2 Resistance 4-6.3 Joule's Law TB7 Resistant Sensor 4-7 Dielectrix 4-7.1 Polarization Field 4-7.2 Dielectric Breakdown 4-8 Electric Boundary Position 4-8.1 Dielectric-Conductor Boundary 4-8.2 Conductor Boundary 4-9 Capacity 4-11 Image Method TB9 Capacitive Sensors Chapter 5 Magnetostatics 5-1 Magnetic Forces and Torques as Electrostatic Potential Energy TB8 Supercapacitor Battery Current carrying conductors on 5-1.1 magnetic force 5-1.2 magnetic torque current carrying loop 5-2 biot-savart law 5-2.1 magnetic Surface and Volume Current Distribution 5-2.2 Field 2 Conductor carrying current on field 5-1.2 Two parallel conductors 5-3 Maxwell's magnetostatic equation 5-3.1 Between the law of Gauss a magnetic dipol 5-2.3 magnetic force magnetism for TB10 electromagnetic. 5-3.2 AMP'Abere's Law 5-4 Vector Magnetic Capacity 5-5 Magnetic Properties of Materials 5-5.1 Electron Orbital and Spin Magnetic Moments 5-5.2 Magnetic Permeability 5-5.3 Magnetic Hysteriasis of Ferromagnetic Material 5-6 Magnetic Boundary Position 5-7 Inductive 5-7 Magnetic Field in A Solenoid 5-7.2 Self-Inducte 5-7.3 Mutual Inductive 5-8 Magnetic Energy TB11 Inductive Sensor Chapter 6 Maxwell's Equation Time-Changing Fields 6-1 Faraday Law 6-2 Stationery Loop Different Magnetic in a Time Field 6-3 Ideal Transformer 6-4 Moving Conductor 6-5 Electromagnetic Generator 6-6 Moving Conductor At a Time Different Magnetic Field TB12 EMF Sensor 6-7 Displacement Current 6-8 Range Position for Electromagnetics 6-9-Charge Current Continuity Relation 6-10 Free-charge dissipation in a conductor 6-11 electromagnetic capacity 6-11.1 retard capacity 6-11.2 time-harmonic capacity Chapter 7 Aircraft-Wave Propagation 7-1 Time - Harmonic Fields 7-1.1 Complex Allow 7-2 Wave Equation 7-2 Aircraft-Wave Propagation Harmless Media in 7-2.1 Uniform Aircraft Waves 7 -2.2 Normal relationship between E and H319 TB13 RFID system 7-3 Wave Polarization 7-3.1 Linear Polarization 7-3.2 Circular Polarization 7 -3.3 Elliptical Polarization TB14 Liquid Crystal Display (LCD) 7-4 Aircraft-Wave Publicity Loss in Media 7-4.1 Low Loss Dielectric 7-4.2 Good Conductor 7-5 a good conductor in current flow 7-6 electromagnetic power density 7-6.1 aircraft wave in a harmless medium 7-6.2 aircraft wave a loss in medium 7-6.2 aircraft wave a loss in medium 7-6.2 aircraft wave a loss in medium medium Decibel Scale for Power Ratios Chapter 8 Wave Reflection and Transmission 8-1 Wave Reflection and Transmission at Normal Incidence 8-1.1 Boundary between Lossless Media 8-1.2 Transmission-Line Analogue 8-1.3 Power Flow in Lossless Media 8-1.4 Boundary between Lossy Media 8-2 Snell's Laws 8-3 Fiber Optics TB15 Lasers 8-4 Wave Reflection and Transmission at Oblique Incidence 8-4.1 Perpendicular Polarization 8-4.2 Parallel Polarization 8-4.3 Brewster Angle 8-5 Reflectivity and Transmissivity TB16 Bar-Code Readers 8-6 Waveguides 8-7 General Relations for E and H 8-8 TM Modes in Rectangular Waveguide 8-9 TE Modes in Rectangular Waveguide 8-10 Propagation Velocities 8-11 Cavity Resonators 8-11.1 Resonant Frequency 8-11.2 Quality Factor Chapter 9 Radiation and Antennas 9-1 The Hertzian Dipole 9-1.1 Far-Field Approximation 9-1.2 Power Density 9-2 Antenna Radiation Characteristics 9-2.1 Antenna Pattern 9-2.2 Beam Dimensions 9-2.3 Antenna Directivity 9-2.4 Antenna Gain 9-2.5 Radiation Resistance 9-3 Half-Wave Dipole Antenna 9-3.1 Directivity of $\lambda/2$ Dipole 9-3.2 Radiation Resistance of $\lambda/2$ Dipole 9-3.3 Quarter-Wave Monopole Antenna 9-4 Dipole TB17 Health Exposure of Arbitrary Length of EM Fields 9-5 Effective Area of Receiving Antenna 9-6 Fris Transmission Formula 9-7 Radiation by Large-Aperture Antenna 9-8 Uniform Aperture Distribution with Rectangular Aperture 9-8.1 Beam Uniform Phase Distribution 9-11 Electronic Scanning 9-11.1 Uniform-Employability Extation 9-11.11.1 With Effective Area 9-9 Antenna Array 9-10N-Element Array 11.2 Array Feeding Chapter 10 Satellite Communication Systems and Radar Sensors 10-1 Satellite Communication System 10-2 Satellite Transponders 10-3 Communication-Link Power Budget 10-4 Antenna Beam 10-5 Radar Sensor 10-5 .1 Basic operation of a radar system 10-5.2 clear range 10-5.3 range and angular resolution 10-6 target detection 10-7 Doppler Radar 10-8 Monopuls Radar Appendix A symbol, volume, Units, and abbreviation Appendix B material Some common material appendix C. Appendix D. Answer of mathematical formulas selected problems for bibliographic index index
