BB Pomegranate Feeder #38 Shocker Grenade Plastic Plug Blue 100 pcs S-Thunder ACC-PL01A #39 M16A1 It's a perfect combination with other weapons for an effective attack. Airsoft as a sport is not as easy as many people think it is. Airsoft battles are usually won with tactics and close combat that makes hand grenades in airsoft particularly important. However, not all hand grenades were created equal, some of which have different functions and effects that were intended for a specific purpose. Therefore, it is important to identify the different grenades that you can use for your next battle. What should you consider before picking up a hand grenade? There are many things to consider when picking a grenade like weight, range, durability, function, and general type. Let's start with the scope and weight. The range can be determined by the weight, a good grenade must hit the target without fail, it must also be light enough to be carried, but also heavy enough to have control of it. Another factor is reliability, the hand grenade should not be secured. Many times, cheap and unreliable grenades can explode in your hand and sometimes don't do what they are supposed to do when they are launched. Therefore, make sure you have already tested your grenades before so you can know which type to refuel. The last important thing to consider before choosing a great hand for airsoft is the type. There are many great types and some can do more than one or two functions. Some shoot pellets, scatter smoke screen, bb shower, decorative, smoke, flashbang, some make loud noises and there are grenades that combine all these devices. Overall, the goal is not to choose the great most powerful one ever created, but to choose a type of grenade that works best with your offensive style. Airsoft Grenadas BBshower: This is one of the most common types of hand grenades because it is very effective in what it does. This is usually a must-have for what a battle because it always overwhelms opponents at many ranges. It is also very secure and can be used by any player of any level. Once this type of great goes out, your opponents know they should take cover. Most of the time, this type of grenade spread something from 200 to 300 bb in an area of about 10 meters. When you throw throw in a small room or a narrow passage of an old fort any airsoft player will have to shout hit. A beautiful Do It Yourself project is that of the Poor Man's Thunder on youtube. He makes hand grenades from vinegar and baking soda. Smoke grenades: The smoke grenade is a perfect tool when you want to blind your airsoft opponent during a skirmish. Before cracking a coin, throw a smoke grenade and it will provide a blanket, create confusion, blind your opponent and offer shelter. The reason is that an airsoft player can both throw smoke grenades while taking aim. You can buy them in several colors. And a nice side effect, they provide a super visual effect for a photo shoot. See below some photos taken from arisoft players. Original stary credits with Inzzen and Airsoft_tiger_gun. Airsoft Flashbang: You should always have a flashbang grenade to distract your opponents. There are different mechanisms for each style, but the traditional great flashbang will make a very strong explosion with a flash. This usually distracts opponents and gives you a chance to take cover or aim for your next move. We see some beautiful projects in creating to simulate a flashbang grenade for airsoft by using LED lights. But that has some challenges. We need to make sure that LED cells are not broken when we hit the ground and we have to produce large, intense flashes. These must be 1000 lumens or more and the LED cells that are capable of producing them are very expensive at the moment. An airsoft flashbang grenade with a lot of potential is the T238. (Real) Inert or dummy grenades Flashbang airsoft grenade, bbshower and smoke grenade are all working grenades. But what if you just wanted to add a grenade to your tactical vest. It doesn't need to work, just looks pretty. 2 possible solutions are available to you, namely the dummy airsoft grenade and real grenades that are rendered inert. Mannequin: Many models are available, but the most common are: The Mk 2 grenade (originally known as Mk II) is a type of anti-personnel hand grenade fragmentation introduced by the U.S. armed forces in 1918. The M26 is a fragmentation grenade developed by the U.S. Military. It entered service around 1952 and was used in combat during the Korean War. The MK13 Mod 0 BTV-EL Sound and Flash grenade is a high-performance stun grenade that offers several unique safety features. The MK13 produces blinding and deafening noise levels sufficient to stun and disorient just below the threshold of permanent injury. The advantage that comes with these dummy airsoft grenades is that they are lightweight to carry and can sometimes be used as a bb container. Easy to quickly reload your AEG or GBB pistol. Inert or deactivated grenades: Every grenade or flashbang ever manufactured is available in an inert state. One grenade that has seen active service also has this patina of an object already used. AND you can trully recreate every period, country, army in time. You have German wwi and wwi, American, European hand grenades. Less can be the weight, a Russian F1 grenade weighs empty about 600 grams. It's not much, but if you add 2 to your vest and walk around it all day, you'll start to feel them. Also, real things are not cheap. An inert grenade can easily give you 50 euros or more. Need to revise, repair, maintain or upgrade your Airsoft guns?
