that you know the seaming all the resources on the map so you can easily find and collect them anytime you want. We have cured this ARK Extinction Resource Location Guide where we will detail the location of all the resources in the games present in extinction. With the help of this guide, you'll be able to easily find all the resources; we've detailed everything below. You can usually get most of the resources that aren't easily found in the game using Gachas. Train as many of them as each can provide you with just one type of source. However, still you need to explore the resources. We've detailed their location below. Oil You will find oil in the Red Zone which is in the middle of the north of the map. Break the black stone on the ground and you get oil and rock. Killing enforcers or robots will also take you some oil. The location coordinates are 8.4 and 42.9. There is also one located in the southern central part of the map as well. You'll find some oil nodes here from where you can break rocks and collect oil. The location coordinates are 80 and 37. Red Crystal Sap You can find Sap in the damaged area. There is one located right outside the damaged area. In damaged areas, you will find strange trees that look burning but live at the same time. Break them down and you'll get Red Crystal Sap and Thatch. In your compass, the location for this will be 8 and 43.7. Slika Slikate is obtained from the Red Zone as well. Break the red rock formations here and you'll get Slika. Along with Slikate you will also be crystals, obsidians and satay too here. Metals were also obtained by killing enforcers. Kill them and leave them to get scrap metal and then smell it to get Metal. Polymer You can get organic polymers from damaged animals. Find and kill the damaged

Giganotosaurus and harvest his body. You will often get faults from harvesting their bodies that are essentially a substitute for organic polymers to Extinction. Go to a location where there are plenty of Giganotosaurses and start farming for the damaged liver and you will get a lot of organic polymers. Bladder Gas Bag You can get the Gas Carddie by simply killing the Gas Bag. You'll find them roaming often so when you want to rear some, start killing and collecting their Gas Bag Bladder. Paste You'll find paste in Beaver Dams across the map. There many locations on the map where you can find them. One such location is 49 and 29.

Find a Beaver Dam and collect the paste from it. Sulfur/Gas Balls Head to coordinates 62 and 27 if you need Sulfur and Gas Balls. You'll find plenty of Sulfur Stone nodes here. Just use your pickaxe to break them down and you'll get a lot of Sulfur and Gas Balls here. Breaking these stones will give you Sulfur and Gas Balls. Green Jewels are actually blue in color so don't be confused when you break blue crystals and the game tells you that you've received Green Gems. They were found to be pretty much all over the map. Find a small blue crystal and break it down. They will give you the Green Gem. Fungal Wood You can collect fungal wood from trees that have purple and yellow leaves. The main trunks of these trees are actually some thin trunks intervene with each other. If you head to coordinates 13 and 27, you will easily find these trees. Break them down, you'll get Fungal Sticks and Red Sap. Electronics You can collect electronics by heading to the City Sanctuary and hitting a light pole with your hatch or axe. You'll also get a metal scrap from those that can be further refined to get Elemental Dust and crystals. Combining Ingot and Slika Metals will also give you electronics. If you're looking for Elemental Dust, check out our guide on how to get it here. This concludes our ARK Extinction Resource Location Guide. If you want to add anything to this guide, feel free to use the comments section below. Does anyone find Silica pearls or know how to rear it efficiently? Killing enforcers for electronics is slowPage 2 16 comments comments
