C. T. SUN, PHD, is the Neil A. Armstrong Distinguished Professor of the School of Aeronautics and Astronautics at Purdue University in West Lafayette, Indiana, and the winner of the 2004 Purdue University Research Award. Dr. Sun teaches composites, elasticity, fracture mechanics, and aeronautical structures. He is a member of both the American Institute of Aeronautics and Astronautics (AIAA), the American Society of Mechanical Engineers (ASME) and the American Society for Composites (ASC). Stock Image C. T. Sun Published by John Wiley & Sons Inc, United States (2006) ISBN 10: 0471699667 ISBN 13: 9780471699668 New Hardcover Quantity available: 1 Book Description John Wiley & Sons Inc, United States, 2006. Hardcover. Condition: New. 2nd edition. Language: English. Brand new book. Designed to help students gain a solid background in structural mechanics and extensively updated to help professionals improve recent advancements This second edition of the bestseller textbook Mechanics of Aircraft Structures combines fundamentals, an overview of new materials, and rigorous analysis tools in an excellent semester introductory course in structural mechanics and aerospace engineering. It is also extremely useful for practicing aerospace or mechanical engineers who want to keep up with new materials and recent advances. Updated and expanded, this practical reference covers: Introduction to the elasticity of anisotropic solids, including the mechanics of composite materials and laminated structures Analysis of stresses of thin wall structures with final constraints Elastic deformation of beam columns, Thin-walled plates and bars Fracture mechanics as a tool to study damage tolerance and durability Designed and structured to provide a solid foundation in structural mechanics, aeronautical structure mechanics, Second Edition includes more examples, more details on some of the derivations, and other sampling issues to ensure students develop an in-depth understanding of the principles.
