Arcoaire Gas Ovens. Arcoaire Gas Furnaces 97% AFUE modulating gas, variable. Arcoaire offers Gas Furnace products. Learn more about the features and benefits of the gas oven and find a dealer nearby. Problems with Comfortmaker RPJ2 Furnace I have a Comfortmaker RPJ2 that was installed new in 1996. Starcraft Boatowners Manual there. Recently it has started to cause problems: the burner will ignite, burn about 5 - 10 seconds and then go out. It will continue this cycle until it is ne down, either at the thermostat or disconnect for at least about 45 minutes. It will then work properly for one or two cycles thereafter. Apr 25, 2015 Gas and Oil Home Heating Ovens - Need help troubleshooting Comfortmaker RPJ II - Hi everyone I've read through these forums for hours starting yesterday. Let me start with the specifications. I have a Comfortmaker RPJ2 that was installed new in 1996. Recently it has started to cause problems: the burner will ignite, burn about 5 - 10 seconds and then go out. It will continue this cycle until it is ne down, either at the thermostat or disconnect for at least about 45 minutes. It will then work properly for one or two cycles then begin with the previous problem again. I think I have ruled out the thermostat even as a problem by switching thermostats between the upstairs and underneath units without negative effects on the other device. I have an original parts list that I could refer to if anyone has any ideas about the cause of this problem. Thank you for your help. Gambro Cwp 100 Service Manual. I have a Comfortmaker RPJ2 that was installed new in 1996. Recently it has started to cause problems: the burner will ignite, burn about 5 - 10 seconds and then go out. It will continue this cycle until it is ne down, either at the thermostat or disconnect for at least about 45 minutes. It will then work properly for one or two cycles then begin with the previous problem again. I think I have ruled out the thermostat even as a problem by switching thermostats between the upstairs and underneath units without negative effects on the other device. I have an original parts list that I could refer to if anyone has any ideas about the cause of this problem. Thank you for your help. You have to have someone look at your oven who knows what they are doing. They have to trace the problem to an individual component with a meter to tell what is wrong. You or anyone can guess, but a good tech can find the problem without being a parts changer. Peugeot 206 Estate user guide. This corresponds to the experience with my Comfortmaker RPJ II, with the following differences/observations: The furnace will cycle through this for a while, sometimes it will kick in and work properly for several days at a time, sometimes it simply won't work, no matter what I'm trying to do in terms of power cycle etc, and then after a day or so, it will kick in and work as it should. Sometimes, if I just take the cover off to observe it, it starts working, other times not. I noticed that the diagnostic lights flash 6 times then repeat the cycle. The current controller (The General by Inter-City Products, p/n 50A50-112) has a label indicating that it should only flash 1 - 5 times, so it is confusing as the code 'does not exist'. I had to replace the ignition rate about 2-3 years ago. The ComfortMaker was installed in the early 90s and had had no other problems that I know of. (We bought the house in '94) I would really appreciate any help and guidance. My RPJ2 won't even ignite any ideas??? On the controller, it flashes 3 times- What is it? The code means: Pressure switches are open (Interrupts sensory pressure, vacuum or differential pressure in applications, including fan status, dirty filter monitoring or frost buildup on coils.) Here's a sampling of what you might look like: Sorry I can't be of more help, I only know what it is and what it means, but I have no idea how to fix it. You can call a contractor and let them know by the code. They will definitely be able to fix you up.: Thumbs. The first guy works like the flame sensor is dirty, you can take it out and clean it with a steel wool, it looks like a metal stick in front of the burner, usually its held in by a screw and has a wire from the back, make sure the power is off, the sensor has 120 volts. The last guy sounds like you have an airflow problem, could be a dirty filter, a dirty coil, that many closed registers, furniture in front of your returns, or the channel work too small, its hard to tell out the computer, but that's what it sounds like to me. Comfortmaker rpj ii oven manual ignites then turns off hvac diy chatroom install 1993 RPG flame sensor does not work page 2 home 4005 comfort maker wiring diagram library I have one, and it is new in 1999 15 year old owners diigo groups need help troubleshooting doityourself.com/sl0559arcoairefreeview& download of more than 15 Arcoaire PDF user manuals, service manuals, operating instructions. As it stands now, there is no filter, but we have to get one on there. I don't have the manual for the device, so no help there. The only thing I could find online was a reference to an 'RJP II' that pointed to the filter rack being external. On mine it's inside and at such an angle that I can't push the filter in. Was my device built incorrectly? It would be a simple enough case to release the rack and re-attach it to the outside if it is actually where it is supposed to go. Anyone with the same model (or manual), any help will be greatly appreciated.
