My method here will give you a permanent rooted shell and will give you a useful read-only root system to use root applications to back up data or freeze system applications --working like real root without being able to remove system content --freezing the application however it works like a charm and should reduce the need for rw roots to stay IN EXACTLY DIRECTIONS --I WILL NOT RESPOND TO STUPID QUESTIONS --PROBABLY WILL NOT RESPOND TO ANY QUESTIONS BECAUSE OF MY DIRECTION , WORKS PERFECTLY WHEN AND EASY TO READ. FOLLOW ALL THE STEPS EXACTLY. IF IT DOESN'T WORK, IT'S BECAUSE OF YOUR FAULT It works best from a factory reset device, but it will work from an already used device but all root applications and superuser applications must delete their data and be deleted 1 first) make sure the device is at least 50% charged--it doesn't matter most of the time; better safe than sorry installing the latest superuser apk installing dirty cow root apk (croowt) [derived from this post make sure usb debugging is enabled in developer settings and make sure you have received debugging access prompt on the phone for your computer will use make sure you have an external sdcard installed - the smaller the better for the first time 2) unlock the dirty cow root apk select get root select method 1 press ok select ok the application will direct you to remove and remove the sdcard, select ok and it will take you to the storage settings take off the sdcard remount sdcard when it finishes proceeding to step 3 3) the open superuser does not update the binary su go to the settings and make the default grant action remove any and all applications from the superuser log including croowt application 3) THIS MUST BE DONE FROM A REAL TERMINAL ON PC--TERMINAL EMULATORS WILL NOT WORK FOR THIS STEP from the pc works with adb settings, preferably linux, input commands exactly as listed adb shell su setprop persist.sys.k P816A06 reboot 5) after rebooting, open dirty cow root apk again select get root select method 2 hit ok select ok if the application asks you to open with the browser, select one, and select the screen is always going to be black, systemui will crash and then reboot 6) once systemui is backed up and running you now have a read-only root you can now freeze system applications or back up your data using applications that require your Root Shell to be permanently rooted when accessed from a computer using adb--this will last forever unless you cancel your System setprop but will only tempp, read-rooted until the phone is rebooted. If you want your temp, read-only root is reactivated, all you have to do is repeat step 5 and that's it. You can do this over and over again. GIVE STAYBOOGY SOME PROPS TO MAKE YOUR LIFE WITH THIS PHONE BETTER Last edited: Mar 25, 2017 Reaction: anarchopunkbarbie, black sky and mblake2482 I don't see how freezing system applications will negate the need for real root methods? Does this Read-Only root method work with lucky patchers or Kernel Auditors? I did it wrong, maybe First of all, thank you so much for doing this. I've been following another thread since it's new, and you've much harder into this than the phone or most of us deserve. I'm stuck trying to run dirty cow. I enabled USB Debugging, installed adb on my Linux computer that recognizes my Maven (i.e. I have allowed access on the phone), etc. This eventually changed from Checking for vulnerabilities to Your Device is vulnerable and I can not proceed to the step Get roots. What did I do wrong? Maybe some recent system updates? Maybe less effort to just buy the Galaxy. Please be gentle. I know I'm a noob. z812 root I previously rooted my maven with kingroot and dirtycow exploit.sh files and today I overwhelmed the device by running windows and multible applications and the phone rebooted and root is still intact.... haven't rebooted yet but I will. ...
