A wiring diagram is a technique of configuring the installation of electrical equipment, e.g. electrical installation equipment at the substituter on a CB, from panel to CB box covering telecontrol aspect & telesignaling, measuring, all aspects requiring a wiring diagram, used for detecting interference, a new auxiliary, etc. 98 Chevrolet wiring diagram This schematic diagram is used to provide an understanding of the functions and work of installation in detail, describing the equipment/installation parts (in the shape of an icon) and the connections.98 This Chevrolet wiring diagram and circuit diagram shows the overall function of a circuit. All of its essential components and connections are illustrated by graphical icons arranged to describe actions as clearly as possible, but regardless of the physical shape of the various items, elements, or connections. Charging, Start, Lighting, Indicators, HVAC Moderators: Fordfition, Thunderfoot Effie\_70 New Members Posts: 161 Joined: Saturday July 14, 2012 21:13 Location: N.C. Postby Effie\_70 » Saturday 25 August 2012 16:25 THEN. I had Tom in f100 flashback of rebuilding my manual 3OTT column, amazing job by the way Tom! Tom didn't have a 70-turn oman/wiring stamp and had to use a 1969 model year. In 1970 there is another yellow thread on the side of the harness/truck and the new Harness 69 No. I'm having trouble getting the turn signals. Brakes etc. for all work properly. Does anyone know or can help me get all the turn signals, brakes etc. to come on as they should? That'd be great! Thank you! 70\_F100 Posts Moderator: 2999 Joined: Monday October 22, 2007 11:23 AM Location: North Carolina, Kernersville Postby 70\_F100 » Sunday August 26, 2012 3:09 pm Since you're at the NC, you don't need to get a checked bump. Applies to all vehicles aged 35 and over. I guess having rotation signals and brake lights would be a good thing, though... But, to answer your question, looking at wiring diagrams, wiring looks pretty much the same, with 7 wires, but 69 have two connectors whereas 70 have only one. The second connector the 69 switch is for the rear traffic lights, while they are integrated into the single connector for the 70. Here are 69 diagram: ...\_81-85.jpg here's 70: ...\_Legend numbers master.jpgWire (on the truck side of the connector): #1 - Horn #2 - RF rotation letter #49 - Dash (RH rotation letter indicator)#3 - LF Activate letter #50 - Dash (LH make Indicator Letter)#282 #3 - RR Turn Letter #283 - LR Rotation Letter #810 - Brake Light Switch #810A - Emergency Radish Switch #44 - Activate #2 & #49 #3 #50, #810 #810A pairs to the connector, resulting in the 7 threads mentioned above. I just went and looked at my 70, and the yellow wire on the truck side of the harness is #283 (LR Turn Letter), so apparently that's not your problem. On my Shee-Mar T/S switch, it's To a green wire with a red marker on the side of the switch. Smart people talk because they have something to say; Fools talk because they have to say something.-Plato Why is it that sometimes there's time to fix it right the first time, but there's always time to fix it right a second time??? It's not an oil spill that sweats out of all this horsepower! Bin 0302 100% Ford! Posts: 6363 Joined: Thu Jan 26, 2006 07:11 Location: Hawthorne, Florida Postby basketcase0302 » Sunday August 26, 2012 3:14 PM From this Master 1970 f series wiring diagram-I believe that wire #283/283A will be the only yellow thread coming from a wiring stamp on a 1970s model: ...\_master.jpgAnd from Ford Truck Master Code Code Yellow Diagram will either feed a rear turn signal to the left or battery to horn feed wire. ...\_chart.gifAnd Here's the wiring stamp diagram of 69: ...\_odel99.jpg does your column have two harnesses coming from it like 67-69 was or just bare wiring without a harness? If my memory doesn't deceive me, my '71 yellow was the signal feed on the left side behind the switch. Which I believe could be blue and white coming out of the 69 switch column you have, (yellow from the harness on the side of the truck should tie to blue and white from the column to get the left light turn and brake light working). Jeffviewtopic.php?f=22&t=46251SOLD-71 F-350 Flat Double, 302/030 Over V-8 with BabyC-6, B&B M truckshifter, Dana70/4.11 ratio, intermittent wipers, tilt steering, full LED lighting on the flat bed, and no stereo yet (that way I can hear the rattles diagnose)! Sold! Many Ford bumps / one 76' EB / and several outlets over the years. A lot of oddball Ford parts collected from working on them for 34 years now!2008 Ford Escape 4 x 4 Effie\_70 New Member Posts: 161 Joined: Saturday July 14, 2012 21:13 Location: N.C. Postby Effie\_70 » Sunday August 26, 2012 3:17 pm Thank you 70\_F100! I've been able to get the brake lights working but still can't get the signals working properly... Everything I try gives me flashing brewers, run on the passenger side, the drivers on the side are blinking! I'll address your diagram and comments... I didn't know our trucks didn't have to pass state review... Good information thank you! Effie\_70 New Members: 161 Joined: Saturday July 14, 2012 9:13 PM Location: N.C. Postby Effie\_70 » Sunday, August 26, 2012 3:19 PM Slim0302 Reporter:From this Master 1970 f series wiring diagram-I believe that wire #283/283A will be the only yellow wire coming from a wiring stamp on model 1970: /tech/wirin ...\_master.jpgAnd from the main color code diagram of a yellow Ford truck will either enter a left rear turn mark or the battery to enter a horn - Chart.gif here's a wiring stamp diagram of 69: ...\_odel99.jpg does your column have two harnesses coming from it like 67-69 was or just bare wiring without a harness? If my memory doesn't deceive me, my '71 yellow was the signal feed on the left side behind the switch. Which I believe could be blue and white coming out of the 69 switch column you have, (yellow from the harness on the side of the truck should tie to blue and white from the column to get the left light turn and brake light working). Thank you, Briefcase. I don't have just one author/wiring stamp from the column... Do you have any idea about the RR side signal connection? ... It is quite confusing. 100% Ford! Posts: 6363 Joined: Thu Jan 26, 2006 07:11 Location: Hawthorne, Florida Postby basketcase02 » Sunday August 26, 2012 8:00 pm Wire #282 on 69' wiring diagram should be green wire in a harness in your truck, it should be the right brake/queue mark. You just have to be able to replace the two, (where they come out of the column) to get the right side working if they're backwards. Jeffviewtopic.php?f=22&t=46251SOLD-71 F-350 Flat Double, 302/030 Over V-8 with BabyC-6, B&B M truckshifter, Dana70/4.11 ratio, intermittent wipers, tilt steering, full LED lighting on the flat bed, and no stereo yet (that way I can hear the rattles diagnose)!
