Just a few steps can help you get an Android device rooted in minutes. Kingo SuperUser is a superuser access management tool for Android devices derived from. It is a good option for SuperSU to manage root rights after rooting your Android. You don't have to be a NASA engineer or anything like that to be able to root your smartphone or tablet. Although it may seem complicated if you don't have any experience, the truth is that there are apps that turn it into a simple process to be able to easily enjoy all the advantages of having superuser rights on your Android device. In fact, one of the best examples can be found in KingoRoot, an app designed to root your phone in just a few minutes and that does not give us any complications at all: we will only need a single click. How do I root my Android phone? Before it's much more complicated. You don't have to be Albert Einstein or anything like that but you have to connect a USB cable to your phone and computer and open the app to launch the process from the desktop app. Now you can continue to do so because there is a version for Windows, but you can also download this APK and do it all right from your Android device. Therefore: Step 1: download the app to your device. For such a purpose, just click on the Download button our green. Step 2: Install and run the tool. Step 3: Click the button to root your phone. Step 4: Wait for it to restart and that's it, you'll have a rooted device. It is one of the most powerful root tools with one of the highest success rates among compatible devices. That's because its developers are constantly and improve the scenarios it works with. For supported brands, it is compatible with the majority of Android manufacturers, including some of the most popular brands: LG, Google, Sony, HTC, Samsung, Huawei, Dell, Benq, ... and it works with Android versions between 1.5 and 5.0. What are the advantages of rooting Android and having superuser rights? You should know that rooting your device basically has full access to the system to be able to make various modifications. This may be due to the fact that Android is an open source system but some manufacturers offer their own custom layers so you can terminate your guarantee. Among its advantages, we must point out the fact that you will have full control over your device, being able to install custom ROMs, remove bloatware or prein installed applications and fully back up through tools such as Titanium Backup. Yes, and the ability to use applications can only be used on the original devices, as well as being able to control the performance of the device. Its main limitations have to do with some security issues, trouble with some updates and, as we said before, lose your guarantee ... What's new in the latest version Add scripts to root Android from 5.0 to 10.0 or higher. Fixed the error. Repair.
