Swords used to inflict more damage than bows - often significantly more dependent on material, and even a wooden sword was up to an arrow, but since the beta 1.8 update, there are no swords (not sung) matching a loaded arrow (with a non-critical blow). One way to use swords without being hit (and thus close the gap between swords and bows) is to dig a trench so that the player's head is the same level as the mafia's feet. The player, of course, must have blocks over his head so that mafias do not enter the trench. Then it is possible to hit the mafias without them seeing the player: this prevents the mafias from retaliating. This method is efficient when defending a fortified building, but it is almost useless when exploring except forever for the player to encounter the spider 2 blocks wide. High damage swords are mainly advantageous because they kill mafias in fewer hits, defeating them faster and thereby reducing the likelihood of the player being damaged in return. By the same tougher, they move these swords less times in the long run, reducing the rate at which durability is spent. Unless the engage in combat very often, swords in general will see a much longer shelf life. The damage of an 8 hp diamond sword over the 7 hp of the iron sword is also a much bigger difference than the difference between the can imply, as it warrants a death of anything deadly in fewer achievements, and any passive mafia in one. The ability to kill quickly is of greater benefit against creepers and ghosts when the time to act can be very short. These combined factors make a diamond sword a compelling reversal. Weaker swords are not recommended for creeper combat (especially in normal or hard) and there are strong arguments for using an arc, due to its range (as long as the bow is at full load). If you approach a creepy one with a sword, a recommended strategy is to use hit-and-run tactics. Hit the creepy and run away until the mind stops, then run forward and hit it again, as many times as needed. With a diamond sword, however, one can simply load up on the creepy while swinging, as the 2-hit-kill allows the player to kill the creep before his fuse stays. Be careful, as this is a risky tactic that could go horribly wrong if you failed, often ultimately leading to the disappearance of the player or elements and the terrain around you. With the sprint ability added in Beta 1.8, swords became a more effective tool in combat: when a crowd is beaten by the player when sprinting, they are sent flying several blocks back because their momentum adds to the mafia's momentum. This is very useful when fighting creepers. They load them into a sprint and beat them, they are beaten back at a safe distance before they could even start their self-destruct countdown, only repeat until the creepy dies. Just make sure there's room behind the creepy and that you don't hit back at an obstacle to maximum effect. This tactic basically eliminates the need to run backwards before going for another hit. This tactic is not recommended for tight areas such as caverns and other narrow spaces, only to do so when encountering a creepy outdoors. A sword with knockback charm is also viable for the hit-and-run tactic as it sends any crowds flying back a few blocks when hit. This can replace the sprint, or even complement it, resulting in a greater effect. If a diamond sword is being used, this can make removal more chilling very easy. Along with the sprint tactic, this is not recommended for use against skeletons , as it grants them a free kick while continuing to approach them. Players are advised to use the sword's critical ability to succeed to send mafias, especially creepers, quickly. A difficult, but effective, manoeuvre is a combination of critical and back blows, sprinting towards the enemy before jumping in and landing a above them before landing. This will both deal with heavy damage and knock the crowd far back, damage in the fall often ending the crowd outside. Sprinting is also good at closing the distance on skeletons and ghosts, but make sure you don't hit them while you're sprinting or they'll be hit again, allowing them a free kick at range. From beta beta Swords are able to block attacks by holding down the right button button. This will block the arrows as well as other projectiles, but reduce the player to a slower speed than sneaking in. Swords and all other damage treated by the player were also halved by one heart in the beta 1.8 update (as before beta 1.5), but increased by 1 HP in release 1.6. Combat A Sword is a melee weapon, a weapon that can only be used in close combat. Because of this, they are not recommended to fight creepers, skeletons or ghosts. A player can turn a sword by clicking left while holding it. A good way to deal with these or any other hostile mafia is to run towards them, hit them with their sword, then run back and repeat until they are defeated. A player could also hit critical attacks on jumping mafias and hit him with the sword on the way down. Starting with beta 1.8, a player could block an attack with a sword by right clicking while holding it. While doing this, a player will take half the damage from the attack. They might as well be delighted with a charming table to increase their advantage, and may have skills added to them by using an anvil and enchanted book. Enchantments Here is a list of possible sword charms: Sharpness (I-V)- Increases the damage treated by the enchanted sword. Smite (I-V)- Increases the damage treated by the enchanted sword more than sharpness, but only applies to mafias such as Zombies and Skeletons. Bane of Arthropods (I-V)- Increases damage caused by the enchanted sword more than sharpness, but only applies to mafias such as spiders and cave spiders. Knockback (I-II)- Increases the knockback treated by the enchanted sword. Fire appearance (I-II)- Ignites any crowd distressed by the enchanted sword. Looting (I-III)- Increases the loot fallen by a mob killed by the enchanted sword. Unbreaking (I-III)- Increases the durability of the enchanted sword. Trivia A Diamond Sword with Sharpness V is powerful enough to kill most critically successful mafias (though this can be hard to do, as it only takes two regular hits to kill a crowd with that charm). Right-clicking while equipping a sword allows the player to block 1/2 of the incoming damage. Rarely, Wither's skeletons, Zombies and Zombie Pigmen can drop the type of sword they are holding (stone, iron or golden swords, respectively). Rarely, a zombie or skeleton can collect and use fallen swords and use them on the player, the skeletons will discard his bow however, and the player cannot pick it up as it will be destroyed. It is possible to block and attack at the same time, causing damage and avoiding 1/2 of the damages taken Enemy. Diamond Swords Deal 8 Damage Health Points equals 4 Hearts. Stone swords are not made of stone, but of cobblestones. This, however, cannot be seen in its texture. You can block and destroy blocks at the same time. You can break wooden blocks faster with a sword, but not as fast as you would using an axe. A sword can break soul sand faster than any other tool. Although golden swords seem to be useless because they try only as much damage as a wooden sword, they are the cheapest to charm than any other sword, which makes it worth making the craft. Blocking with a sword makes you very slow, so it is not recommended to try to flee while blocking. In 1.9 Shields will replace the locking of swords. Lock.
