## Duncan kiln ea-122 manual

I have a Duncan EA-820 Teacher Plus Energy Saver Kiln too and have previously written to Paragon about basically what the different settings mean. The answer I received from the pretty lady who replied didn't really give me much help. I went to paragon & I found the downloads and I downloaded everything, including the maintenance manuals didn't really explain the automated or energy saver logos. I'm very happy that paragon has the time and effort to put it on the web. Anyway, that's my current opinion and if anyone really knows it's wrong, please let us know, but it seems to work out. I used an ohm meter to measure the resistance that was the same for all settings except for the ceramic (bisque) environment, where the resistance doubled. Since the wiring diagram for similar duncan kilns seemed to indicate that the elements were in parallel in the upper part of the oven and lower portion of the oven, and the higher resistance indicated that perhaps just 2 of the 4 elements were up in the bisque (ceramic) environment. Maybe that's the energy saving feature? When I peered into the peephole in this neighborhood, sure enough, only half the elements were up, but anyway environment from down to overglaze, and hi fire, all elements were up. Since Arnold mentioned the 2 in one switch, things pounced in a theory. (of course based on just one Kiln, it can easily be faulty (both argument and oven :) I suspect from down to overlap (counterclosure) the infinite switch controls the amount of time the current flows up and down. It checked as I could look at the electric meter a few feet away started to zoom when the oven was drawing current and the slower when the infinite switch clicked off. Then when the lump is more counter-clockwise-turned to the 'ceramic' position, half the elements are at all the time, and when turning to hi-fire, all the elements appear to be at 100% of the time. it went to cone 8 as advertised on high fire. I just have a pyrometer I can attach to the oven so I can watch the temperature and chart the driveway. Jim Pendley Hi Arnold, I don't like to contradict your comments knowing you're having paragon, but, I've got this oven here facing me. It says EA-820 Duncan Automated Teacher Plus energy saver on the nameplate and is a non digital automated and it doesn't have a manual dominate switch. I read that only the EA-1229 had the overriding switch. The ES-820 Wiring diagram in the duncan kiln service manual pg. 58 on paragon's website shows that there are 2 infinite switches, one for top 2 elements and one for the bottom 2 elements, while the EA-820 has only one switch (infinite? that somehow controls all 4 elements. I've never seen an ES820, so I accept that wiring diagram is accurate for that, but I can't find an actual wiring diagram for the Duncan EA-820 or the DA-820, only the ES/DK 820. If you do have a wiring diagram for one of these 2 models, I'll be very happy. Thank you Jim Pendley --- Arnold Howard wrote: & The Duncan EA-820 is the same as the DA-820, except & that the EA Series & has a ceramic fibre dec and bottom. Therefore, the & EA range is labeled as & The fiber lid and bottom save & small amount of energy & compared to the firebrick lid and bottom. & & The Duncan non-digital automated kilns have a tutorial to override & To quote & the Duncan catalog, It gives the operator & more control over how & long the oven stays on Layer, how fast the temperature rises, & how fast you & want to fire. & & To use manual override, move the override switch to & either Manual Low or & Manual High. Using the manual override cancel & automatic cycling. & & good luck with your oven. & & Sincerely, & & Arnold Howard & Paragon Industries, L.P., Mesquite, Texas USA & arnoldhoward@att.net/www.paragonweb.com & & The Duncan EA-820 is the same as the DA-820, except that the EA Series has a ceramic fiber lid and bottom. Therefore, the EA range is labeled energy saver. The fiber lid and bottom save a small amount of energy compared to the firebrick lid and bottom. The Duncan non-digital automated kilns have a manual dominate switch. To quote the Duncan catalogue, it gives the operator more control over how long the oven stays on Low, how quickly the temperature rises, or how fast you want to fire. To use tutorial overrides, move the override switch to either Manual Low or Manual High. Using the manual override cancels the automatic cycling. Good luck with your oven. Sincerely, Arnold Howard Paragon Industries, L.P., Mesquite, Texas USA arnoldhoward@att.net/www.paragonweb.com From: jim pendley & I have a Duncan EA-820 Teacher Plus Energy Saver & Kiln too and have written to Paragon previously about & basically what the different settings mean. didn't really explain the &gt; automated or energy saver logos. I am very pleased &gt; that paragon has taken the time and effort to put it on the web &gt; &gt; Anyway , that's my current opinion and if anyone &gt; really knows it is please let us know, but it &gt; it seems to work out. &gt; I used an ohm meter to measure the resistance &gt; which was the same for all settings except for the &gt; ceramic(bisque) environment, where the resistance was &gt; doubled. Since the wiring diagram for similar duncan-&gt; the elements appeared to be in ' &gt; was portion of the oven and lower &gt; section &gt; of the oven, and the higher resistance indicated that &gt; perhaps only 2 of the 4 elements were up in the bisque &gt; (ceramic) environment. Maybe that's the energy saving &gt; feature? When I peered into the peephole in this &gt; setting , sure enough, only half the elements were &gt; on , but in any each environment of overlapping, &gt; and hi fire, all elements were up. Since Arnold &gt; 2 mentioned in one switch, things popping into ' &gt; theory. (of course based on just one Kiln, i &gt; can easily be faulty (both argument and oven -) &gt; &gt; &gt; I suspect from down to overglaze (&gt; counterclosure) &gt; the infinite switch controls the amount of time that &gt; the &gt; current flow &gt; up and down. It checked when I &gt; the electric meter could look a few feet away to zoom when &gt; the oven current sign and the slower toe &gt; the &gt; infinite switch clicked off &gt; did. &gt; &gt; Then when the lump is turning more counter-clockwise &gt; to the 'ceramic' position, half the elements are &gt; at all the time, and when turning to hi-fire, all &gt; the elements appear to be at 100% of the time. It went to &gt; cone 8 as advertised on high fire. Jim, I welcome corrections because my knowledge is limited. I don't know why your EA-820 has no override 3-way switch. It's weird. I will send you a paper copy of a wiring diagram if you send your address. (Many of the Duncan diagrams are easier to read from a paper copy rather than a pdf image.) Sincerely, Arnold Howard Paragon Industries, L.P., Mesquite, Texas USA arnoldhoward@att.net/www.paragonweb.com Van: Jim Pendley &gt; Hi Arnold, &gt; I don't like to contradict your comments knowing &gt; that you are with paragon, but, I have this oven right &gt; here facing me. It says EA-820 Duncan &gt; Automated Teacher Plus energy saver on &gt; the name plate and is a non digital automated and it &gt; doesn't have a manual dominate switch. I read that &gt; the EA-1229 had the overriding switch. The &gt; ES-820 Wiring diagram in the duncan kiln service &gt; manual &gt; pg. 58 on paragon's webpage shows that there are 2 &gt; &gt; infinite switches, one for top 2 elements and one for &gt; the bottom 2 elements, while the EA-820 has only one &gt; switch (infinitely? or 2 in 1 you mentioned earlier&gt;mail to sincultura13 shipping) that somehow controls all 4 &gt; &gt; I've never seen an ES820, so I assume that &gt; wiring diagram is accurate for that, but I can't find an &gt; actual wiring diagram for the Duncan EA-820 or the &gt; DA-820, only the ES/DK 820. If you do have a wiring &gt; diagram for one of these 2 models, I'll be very &gt; &gt; If you're looking for Duncan Kilns like the dk820x-2, parts, or instruction manuals find answers here. Many people are still for ovens, manuals and repair parts of Duncan. Unfortunately, they no longer make their kilns. They haven't made them for a number of years. Fortunately, their kilns are now made by Paragon Kilns. I believe Paragon continues to service Duncan parts for recovery. They also have many of the Duncan instruction manuals on the Paragon website along with the Paragon kiln instruction manuals. Other than that, a lot of used Duncan Kilns is still floating around on Ebay and other sites, so if you're specifically looking for a Duncan, there's still plenty of hope to find one. If you're open to exploring other major brands, I recommend going to the Paragon,L&amp;amp; ; L, Cress or Skutt lines. All these manufacturers create quality kilns. Several of them have been around for more than half a century and have long histories of serving the pottery and ceramic community. Read all about the different oven manufacturers at the main Ceramic Kiln Manufacturers page. Thanks for reading, happy hunting, and happy pot.
