Sierra infinity 7 free download

Sierra's newly released Infinity Version 7 Exterior ballistics offers an easy-to-navigate interface designed by a shooting enthusiast and Microsoft® software designer, Rodney Korn. Like Infinity Version 6, Infinity Version 7 allows users to create multiple trajectory graphs and graphics, point blank range, calculate zero, uphill/downhill shooting, maximum range, angle of a minute, profiled wind improved atmosphere, modified print formats, trajectory mils, gun database and more. Infinity 7 calculates ballistic data based on calculations by renowned Sierra ballistic consultants and retired chief scientists Ted Almgren and Dr. Bill McDonald. Infinity 7 is compatible with Windows® 8, 7, Vista, XP or Win2K. Infinity 7 is available as stand-alone software or packaged in Sierra 5. Software users are encouraged to view the Sierra Bullets website downloads and updates. Infinity 7 Demonstration Video Profiled Winds Demonstration Video Check back for more instructional videos! Download the new 59-page user guide. Infinity7.2.1.UserGuide Sierra introduces New Infinity Ballistics Software Sierra Bullets Sedalia, MO -(Ammoland.com)- Sierra's newly released Infinity Version 7 Exterior ballistics software offers an easy-to-navigate interface designed by a shooting enthusiast and Microsoft software designer, Rodney Korn. Like Infinity Version 6, Infinity Version 7 allows users to create multiple trajectory graphs and graphics, point blank range, calculate zero, uphill/downhill shooting, maximum range, angle of a minute, profiled wind improved atmosphere, modified print formats, trajectory mils, gun database and more. Infinity 7 calculates ballistic data based on calculations by renowned Sierra ballistic consultants and retired chief scientists Ted Almgren and Dr. Bill McDonald. Infinity 7 is compatible with Windows 8, 7, Vista, XP or Win2K. See software demo below: See the Sierra Bullets website www.sierrabullets.com downloads and upgrades. About Sierra Bullets Over 60 Years Sierra Bullets has been dedicated to producing the most accurate bullets in the world. This commitment to performance has created the Precision tradition for which Sierra is known worldwide. For more information, visit www.sierrabullets.com. HOW MUCH DOES IT COST TO DELIVER THIS ITEM? Delivery of this item to the UK mainland address is £4.00.If you add other items your order delivery fee will remain at £4.00 (some exclusions apply, including explosives and gun cabinets). HOW SOON WILL MY ORDER ARRIVE? Our goal is to send all orders submitted before 13:00 on the same day. Orders placed after this time will be shipped on the next business day. For the United Kingdom you should receive your item within 2-3 working days of placing your order. We'll send you an email notification when your subscription is shipped. We always try our best to send out all orders by following the instructions above, but during extremely busy periods, shipping times can increase by up to one day. We will keep you informed of the status of your order by email. HOW CAN I TRACK MY ORDER STATUS? You will receive an e-mail to confirm that we have received your order. You'll also receive an email that tells you when your order has been shipped. In your dispatch confirmation email, we'll include all relevant tracking numbers that allow you to track your shipment on the carrier's website. Do I have to sign my order? Depending on the service we use to send your subscription, someone might sign your subscription. If your order is shipped by Parcel Force or Tuffnells, you will need a signature. The e-mail address of your dispatch confirmation will confirm which carrier has been used. WHAT IF MY ORDER IS DAMAGED? If any product you receive from us arrives damaged, please contact us on 01132 569 163/01132 565 167 or email us sales@henrykrank.com as soon as possible. We will then advise you on the best action. In most cases, we ask you to return the item to us for exchange or refund. WHAT SHOULD I DO IF I WANT TO RETURN THE GOODS? Please click here to read our income policy. I live abroad, how much does it cost to offer this point? Please note that only UK delivery orders can be placed online. We can send some items abroad. If you are an overseas customer please contact us on 01132 569 163/01132 565 167 or email us sales@henrykrank.com with a list of items you are interested in, please include your name and full address so we can calculate the delivery fee for you. provides several trajectory graphs and graphics, point blank range, calculate zero, uphill/downhill shooting, maximum range, angle, profiled wind, enhanced atmosphere, modified print formats trajectory mils and more. The easy to use Windows format makes INFINITY very user-friendly. Bullet library includes all major bullet companies as well as ammunition companies and allows you to add new and customized bullets. Sierra Ballistic Consultants Ted Almgren and Dr. Bill McDonald, who have written all about Sierra Software since the 1970s, also wrote INFINITY 7. Both are retired chief scientists from a major space company. This program is only available in CD-ROM format. Rodney Kor interface and program architecture design. The system requirements are: Windows® XP, Vista, 7 or 8, 800x600 resolution and 120MB of hard disk space. Sierra's INFINITY Exterior Ballistic Computer Software version 7 offers several trajectory graphs and graphics, point blank calculate zero, uphill/downhill shooting, maximum range, angle of a minute, profiled wind, improved changed print formats for the trajectory mils and more. The easy to use Windows format makes INFINITY very user-friendly. Bullet library includes all major bullet companies as well as ammunition companies and allows you to add new and customized bullets. Renowned Sierra Ballistic Consultants Ted Almgren and Dr. Bill McDonald, who have written all sierra software since the 1970s, also wrote INFINITY 7. Both are retired chief scientists from a major space company. This program is only available in CD-ROM format. Rodney Kor interface and program architecture design. The system requirements are: Windows® XP, Vista, 7, 8 or 10, 800×600 resolution and 120MB of hard disk space. The program does much more than calculate bullet trajectories. It includes a function that calculates the effects of bullet trajectory variations on firing conditions. For example, you can change the height of a shooting point and calculate the effect on the trajectory. Or you can change the wind condition; or cone speed; or ballistic coefficient. In fact, you can change any inserted firing condition or a combination of conditions. You can also graph the trajectory variations that result. Another important feature of the program is that it calculates the point of the blank range cartridge of the game animal or silhouette target of any size (up to an important zone of 30 inches - 7.62cm), either in two cases. The first case is if you've already seen your weapon in a certain zero range and you want to know how far you can shoot a target without holding a high offset drop bullet. In the second case, the program tells you where to set a zero range to maximize the point in a blank range. The program will also tell you what happens when you first zero your weapon at a comfortable shooting range, and then shoot a target that is either uphill or downhill compared to the shooting range where you observed. In this situation, the ball's trajectory is different compared to the trajectory range that is used as zero. The program calculates the differences between all trajectory parameters for you. Another feature of the program calculates where your weapon is reset when you know it shoots a high measured amount of known range. Another function calculates the maximum range to which a bullet can reach a given angle of inclination. The angle of inclination can be chosen as positive (uphill), zero (level) or negative (downhill). This function also calculates the height angle of the gun icon (referred to as the level) so that the dot reaches the maximum range on the selected slope. INFINITY handles up to five different active bullets at a time. The program stores a complete list of bullets and cassettes offered by 15 manufacturers, both U.S. and foreign. All five active bullets can be selected from anywhere in the List. The main function of the program allows you to compare any of the five (or any smaller) dots selected from any of the multiple trajectory parameters. You can compare the remaining speed, energy, drops, bullet path height or upwind drift. The program provides both a list and a graph of these comparisons. You can also create custom bullets and save settings to a custom bullets database. These custom settings feature a program in the same way as manufacturers of bullets. You can save an existing bullet change or create a custom bullet from scratch. A custom bullet database is handled separately from the manufacturer's database, which allows future updating of the manufacturer's data without affecting your custom settings. INFINITY specifies the ranges of conditions in many data entry fields to ensure that only data is entered, which gives accurate and reasonable results. For each field that has specified conditions, you'll see these required ranges in the status bar in the bottom left corner of the main form. If you enter a value outside these ranges, an error dialog box appears and you must return to this field and enter a value within the defined range. Why doesn't anyone really talk about the program? I use it and it works perfectly. It only cost \$19. You can figure a twist rate and whatever you need. You hear a lot about JBM but never seirra. Why? Re: Sierra Infinity 6 program JBM is available for free online. Why should I pay for a program that works p.C., which I then have to be posted to me and install p.C.? And Sierra isn't available for handheld devices. Re: Sierra Infinity 6 program I still use Sierra 3. Created some new database entries with newer bullets, plus some custom my loads. Blasted goons Redmond will not let newer OS create charts, or print. Re: Sierra Infinity 6 program I used JBM before. I like Sierra better. You have a more complete program. The man spends \$4,000 on the set-up, but wont spend \$19 on the program. I use everything on the go. So I'm not worried when I'm out shooting what my PDA will say. I should figure it all out. Is Sierra 3 pretty good? Can you upgrade this program to infinity 6? Re: Sierra Infinity 6 program I have Infinity 5, and they want me to physically send it to the exchange. Re: Sierra Infinity 6 program for Sierra works only well with Sierra bullets. If you look at B.C.'s developed Sierra bullets they all have multiple BC's multiple speed guards. However, for all the other brands of bullet library in this one in B.C. . It was for this reason that I was extremely disappointed by Sierra Software. JBM ballistic calculators are as accurate as Sierras software. JBM point mass program is able to calculate multiple BC's from bullets to physical dimenitions and data That my Sierra software can't be done. I make my own bullets, and Sierra is useless to me to model their custom bullets. However, JBM has saved my life with its excellent point in the mass program. I think it all depends on what your needs are. Re: Sierra Infinity 6 program I bought Sierra Infinity 6 before the discovery of the JBM site. All in all, it's a good program. I find that JBM is very correct in my field of data, so I've been using it ever since. Besides, it's free. I have to say, I like the old format better than the new one. But again, it's free, so I can't really complain. Re: Sierra Infinity 6 program I have used both. Is JBM not just an internet thing. You have to be logged in. Re: Sierra Infinity 6 program Why do you have to send the program back? Is this to get an updated program? Re: Sierra Infinity 6 program Yes, they want to Disc 5-series, requires that the plate have a puter to function ... So, downloading is useless if you have a disk. Re: Sierra Infinity 6 program I also have infinity five suites. So you send a record and they give you a 6? <div class=ubbcode-block><div class=ubbcode-header>Originally Posted by: Two Shoes</div><div class=ubbcode-body>Yes, they want disc 5-series, requires that the plate have a puter to function ... So, downloading is useless if you have a disk.</div></div> Re: Sierra Infinity 6 program that had my second complaint about Sierra software it is not a stand alone application. You must insert a disk to work. If the disk is lost, stolen or damaged, your program on your computer is useless. I begged James Brad Millard to sell me a copy of his skitter program, but not luck. I think he thinks I can try to sell the code or something. Which I would never do. From there, you won't need a disk if you're not going to download it to your other computer. 6 program must be slightly different. I get all the time without a disk on my computer. It works great. Re: Sierra Infinity 6 program <div class=ubbcode-block><div class=ubbcode-header>Originally Posted by: dar</div><div class=ubbcode-body>6 program you just downloaded your computer and removed the disc. From there, you won't need a disk if you're not going to download it to your other computer. 6 program must be slightly different. I get all the time without a disk on my computer. It works great. </div></div> Thanks to that it is good to know that they had to listen to my complaints then. Then.
