Boys 16 inch bike

16 Items 16 Inch bicycles are generally suitable for both girls and boys aged 3 to 6 years. Usually, these bikes of this size will have training wheels and no gears unlike larger sizes of children's bikes. At this age, children may not develop much of the strength required to ride, so the weight of the bike will be an important factor. For older children, consider a 16-inch BMX for a stronger, heavier bike. The 16-inch bikes are the perfect introduction to using pedals for young cyclists, and their lightweight frames and small-diameter wheels provide easy operation when learning how to ride. Most 16- inch bikes are standard training wheels to provide stability for cyclists that can be easily removed as their confidence and skills progress. The 16-inch bikes are available in a variety of options, including unisex, girls 16-inch bikes and boys 16-inch bikes. Different features separate bikes with boys' and girls's specific frames from design and features to colors. 16 inch bikes are similar to 12-inch bikes, and the biggest difference is that they are usually the second bike after the kids have grown out of the previous bike and have basic riding options under control. The best 16-inch bikes at the best price of 99 Bikes carry a huge range of boys and girls 16-inch bikes from leading brands such as Merida, Schwinn, Mongoose, and more all covered by our 5% Price Beat Guarantee. Shop online using click and collect and shop at any 99 Bikes, with locations throughout Australia including Sydney, Brisbane, Perth, Canberra, Adelaide, sunshine coast, Melbourne and Gold Coast, there is a shop nearby. Children's 16-inch bikes usually fit children as early as the age of 4 and allow them to grow for about 2 years. We love 16-inch bikes because they are usually the first bikes where kids really become independent and confident! As a result, it is important to find a 16bike that fits your little one like a glove! If you're not sure if your child will fit on a 16 bike, be sure to check out our guide to baby bike sizes. Why trust us? Over the years, we've tested over thirty-16-inch pedal bikes with different riders in different terrains. In the end, we decided that there is not one best bike, but rather bikes that are better for different types of riding and riders. Unlike most top lists, you won't find a single bike crowned as our top pick, but rather highlights about every bike that will help you find the best for your child. Wondering what all our favorite 16-inch bikes look like in action? Check out our video summary below to watch our kids put them to the test. BUDGET 16-inch BIKES (UNDER \$260) What we're looking for in a bike under \$260While these bikes are not as well designed or as light as the bikes that take our best recommendations, they all perform impressively for their price they have good basic geometry with a properly positioned steering wheel (not too high, not too low), reasonable weight (under 25 pounds) and durable design. Guardian Ethos Budget Bikes: Best Safety Innovation MSRP: \$259 SEAT HEIGHT: 18 - 23.5 WEIGHT: 17.5 lb. STANDOUT FEATURES: Proprietary braking system helps kids stop the bike with more control FULL REVIEW: Guardian Ethos Lightweight and well designed. Guardian bikes are equipped with their own braking system called SureStop, which prevents dangerous braking. When braking with only the front handbrake at high speeds, the bikes can tilt forward, pulling the child out of the bike and over the handlebars. SureStop on Guardian bikes prevents this by having only one brake lever that activates the front and rear brakes. It is not only the safest system on the market, but also much easier to use than most traditional two-handed brakes. The Guardian's Ethos line is a more budget-friendly version of their original premium line. Both models have the same features, but the Ethos line is a bit heavier because it is made of steel compared to aluminum. Raleigh MXR 16 Budget Bikes: Best for Adventurous Riders MSRP: \$170 SEAT HEIGHT: 18 - 24 WEIGHT: 18.3 lb. STANDOUT FEATURES: Durable design with good basic components FULL OVERVIEW: Raleigh MXR 16 impressively durable, Raleigh MXR provides a smooth, comfortable ride and is sure to last for years. With a slightly lower handlebar, it works better for adventurous kids who can go through small jumps or curbs. While it's not recommended for really aggressive riders (we still need to find a bike under \$200 that's suitable for aggressive riders), the MXR is the best choice for adventurous riders on a budget. Schwinn Elm / Koen Budget Bikes: Best for everyday shy MSRP riders: \$145 SEAT HEIGHT: 20.5 – 24.5 WEIGHT: 20.6 lb. DISTINGUISHING FEATURES: Easy-to-ride, child-specific design FULL OVERVIEW: Schwinn SmartStart Series Available in many styles and from many retailers, Schwinn's SmartStart SmartStart bike collection (including a 16-inch elm bike for girls and Koen 16 inch boys bikes) is a big step up from cheap big-box shop bikes. Lighter than these bikes, the SmartStart series also provides high-end, child-specific geometry for a more stable and comfortable ride for kids. While the overall design is still a lower quality budget build, the price is much more affordable for many parents. The SmartStart series is equipped with a handbrake, but it is poorly made and riders will have to rely on the coaster brake to stop. BEST NEIGHBORHOOD 16 INCH BIKES What We Look for in a Neighborhood BikeMost kids on 16 inch bikes stick to riding around the Stable, reliable and lightweight neighborly bikes should be easy to ride, easy to balance and perform consistently. WOOM 3 Neighborhood Bikes: The Best to Start With MSRP: \$389 SEAT HEIGHT: 19.1 – 24.8 WEIGHT: 11.7 lb. STANDOUT FEATURES: Comfortable, vertical geometry FULL OVERVIEW: WOOM 3 Bike for novice cyclists. WOOM Bikes is a high-end children's bike company that prides itself on designing bicycles built specifically for smaller frames for children. Smaller, lighter and with a lower centre of gravity than the average bike, the WOOM 3 is extremely easy to balance and has a special braking system that helps small beginners learn how to properly use double handbrake for the first time. Guardian Original Neighborhood Bikes: Best Safety Innovation MSRP: \$359 SEAT HEIGHT: 18.5 - 23.5 WEIGHT: 16 lb. STANDOUT FEATURES: The proprietary braking system helps kids stop the bike with more control FULL REVIEW: Guardian 16 inch While Guardian bikes boast lightweight bez frames and a child-specific design, which really makes the Guardian stand out for its own braking system called SureStop. Designed to prevent dangerous braking, SureStop has only one brake lever, which successively activates the rear and front brakes. It is not only the safest system on the market, but also much easier to use than most traditional two-handed brakes. Also available in the more budget-friendly Ethos model. Priority Start 16 Neighborhood Bikes: Best Bang for Your Buck MSRP: \$319 SEAT HEIGHT: 18.5 - 23 WEIGHT: 15.9 lb. STANDOUT FEATURES: Tons of features at full price REVIEW: Priority Start 16 Built with high-end components that provide durability and performance, Priority 16 packs a lot of punch in its under\$300 price tag. Priority bikes started with Kickstarter and became a respected, innovative bike brand. Great first real bike for kids, Start will have your child's desire for adventure on two wheels in a short time. Extra bonus - kids think that super silent belt drive is ninja cool for stealth mode, and parents love all the features you get for the price. BEST 16 INCH MULTI-USE BIKES What We Look for in a Multi-Use Bike - For Paved & Mild-Trail UseRiders who are ready to hit the trails (both paved and compact dirt), as well as every jump or curb are better off with low-rise handlebars that place the body in a more leaned forward position on the bike. This allows riders to easily shift weight to maintain balance on uneven surfaces, jumps, curbs, etc. Wider and/or knob tires, as well as two-handed brakes and no coaster brakes, also help small adventurers to maneuver safely in the technical field. Prevelo Alpha 2 Multi-Use: Best for Adventurous Riders MSRP: \$379 SEAT HEIGHT: 18 - 26 WEIGHT: 14.9 lb. STANDOUT FEATURES: Well suited for long distances and aggressive driving FULL REVIEW: Prevelo Alpha 2 Designed for with lightweight, low-center-of-balance frame and high gear, Prevelo Alpha Two is the perfect bike for kids who want to a long ride with your family, as well as an occasional bike jump or pump track. With a gain factor of 3.8, the rider gains considerable distance with each pedal stroke, making it easier for young cyclists to ride long while being fast and agile for fun and adventure while riding around the area. Multi-Use: Everyday Riders MSRP: \$375 SEAT HEIGHT: 19 - 26 WEIGHT: 16 lb. STANDOUT FEATURES: Light, agile ride FULL REVIEW: Cleary Hedgehog Light and agile with impressive stability, Hedgehog is the perfect ride for fitting curbs, jumping around the area or cruising through a basic single track. Responsive handbrake and low gears make it ideal for more ambitious and/or uphill terrain. Cleary bikes really make cycling fun! The Cleary Owl, which is a 20-inch version, is the size of a larger 16-inch bike and is often a great fit for many older 5 or 6-year-olds. Pello Revo Multi-Use: Best for Basic Trail Riding MSRP: \$359 SEAT HEIGHT: 20 - 24.5 WEIGHT: 16.3 lb. DISTINCTIVE FEATURES: Knobby tyres, high-end components FULL OVERVIEW: Pello Revo Pello Bikes was founded by dad looking for a lightweight children's bike, built with high-end components that won't break the bank. He succeeded. Built with a Cane Creek headset, Kenda tires and a Tektro calibrated brake, Revo has much better components than the 16bikes found in the bike shop. Unlike Hedgehog and Rowdy, Revo is equipped with knob tires that are better suited for trail riding. Revo is also equipped with two-handed brakes and a coaster brake that can be removed via the \$20 Pello freewheel kit. Raleigh Rowdy 16 Multi-Use: Best Bang for Your Buck MSRP: \$260 SEAT HEIGHT: 21.5 - 26 WEIGHT: 15.6 lb. STANDOUT FEATURES: Very light at full review price: Raleigh Rowdy's 16 Lightest and Best Equipped Bike under \$230, durable Raleigh Rowdy is quite a lot. Although not as polished as others, it still provides a smooth, lightweight ride with a very aggressive body position for adventurous riders. Bonus: Spawn Banshee, Best for True Trail Riding: Although we haven't tested Banshee for ourselves yet, we've only heard rave reviews from parents and professionals from the world of cycling. With its twisted tyres, Tektro two-handed brakes and shorter wheelbase for increased riding and manoeuvrability, the Spawn is the perfect starting bike for a true off-road rider. BEST BIKE SHOP BIKES What We Look for in a Bike Shop Bike While bike shops have good quality bikes, they are often heavier and offer minimal features compared to the bikes available from child-specific bike manufacturers online. Due to restrictions set in local bike shops by larger manufacturers such as Specialized and Trek, these new brands For children of the breed are rarely, if ever, available in local bike shops. More often than not, they are lighter and provide a higher level of performance at a price. For more detailed differences, read Bike Shop Bikes vs. Online Bikes – Why Online is often a better deal. Shop bikes, however, are always 100% assembled, tuned and come with a bike shop mechanic to help you keep it in top shape. If you prefer to buy at your local bike shop, be sure to buy one in a store that is willing to take the time to find the right bike in your child's shop, compared to trying to sell you a badly fitting bike that either provides little room for growth or is too big and will require your child to grow up. Of the bikes we tested at local bike shops, Norco Samurai and Specialized Riprock Coaster are our top picks. Norco Roller (\$319) was our favorite hands-down without coaster brake and comfortable but somewhat aggressive geometry. It worked consistently and smoothly for our 5-year-old tester in the area as well as in the local bike park. Specialized Riprock Coaster 16 (\$250 - formerly Hotrock) provides a very stable ride and is durable enough to withstand summer, but its coaster brake and lack of handbrake make it less desirable for all terrains and more aggressive driving. Trek Precaliber (\$249) was our least favorite because it was the heaviest and also didn't offer handbrake, just a coaster brake. While we have a much more detailed discussion about what makes a great bike in our best shopping guide for kids, here's a quick summary of the most important things to look out for to find the perfect bike for your 4 or 5-year-old. Girls 16 Inch Bike vs Boys 16 Inch Bike Is there really a difference between 16-inch bike girls or boys? In addition to color or design patterns, not exactly. There are some cheaper girls bikes that have swooping frames, but in today's world, all the best kids bikes have identical frames and components for boys and girls. All brands of children's bikes offer a wide range of colors from girly to boyish or gender neutral. You don't have to look for a 16-inch girl bike or a 16-inch boy bike. Just choose the best bike for kids and find the color that your child loves. If you are wondering which brands have purple and pink and turquoise colors for a 4 or 5 year old girl, check out our site on the best bikes for girls. Size – Kids 16-inch bikes vary greatly as a 16-inch bike is generally the best fit to buy for 4 and 5-year-olds. If your child is a very tall 5-year-old, you should also consider a 20 cm bike to provide more room for development. In the size of a 16-inch wheel, there is a very seat height range. The smallest 16-inch bike we recommend has a minimum seat height of 18, while another has a minimum seat height of 21.5! To give you as much room as possible to grow, find a bike with a minimum seat height that is as close as possible to your child's ideal seat setting (which will vary depending on your inseam inseam whether this is your child's first pedal bike). If this bike is your child's first pedal bike after a balance bike, the bike seat should be set horizontally or just below their excuse measurement. This allows the child to sit in the seat and easily put his feet down to stabilize or stop the bike. This is crucial because they learn to pedal to instill confidence and ensure maximum safety. If your child has already mastered pedaling, you should set the bike seat about 2 above your child's finger for maximum performance while pedaling. Weight – Lightweight is the key to gaining confidence Ideally, your child's bike should not weigh more than 30% of their body weight. In general, the lighter the bike, the easier and less tiring it will be for your child. Heavy bikes are really hard to manage for the little ones who have still mastered the art of balancing and pedaling at the same time! For example, can you imagine a 4-year-old trying to ride a Royal Baby 16 bike that weighs 24 pounds compared to a woom 3 at 11.7 pounds? Since children often start their pedal bike journey on a 16 bike, if possible, we often encourage parents to increase their budget a bit to make their children's cycling lighter. With a lightweight motorcycle, they can quickly become confident with small pedals. Once confident, they can often cope with a heavier, often less quality bike for the next bike. Frame Design – It goes far beyond appearance! The design of the bike frame plays an important role in the overall feel and performance of the bike. Some bikes put your child upright, which feels very natural for novice riders and is great for neighborhood riding. Other bikes require the driver to lean forward to capture the handlebars, putting the children in a more aggressive position. These types of bikes are generally better for more experienced, risky riders who will do more aggressive riding. Brakes – Try to avoid coaster brakes coaster brakes (rear pedal brakes) are often found on 16-inch bikes, but they can inhibit your child's ability to learn to pedal while balancing the bike. Why? While learning to pedal and balance the bike, children (like adults!) naturally pedal backwards when trying to regain their balance. If the bike has a coaster brake, pedaling back inadvertently activates the bike brake, which slows down the bike and often leads to failure. Without a coaster brake, pedaling backwards to regain balance is not a problem. As a result, we greatly prefer bikes without coaster brakes and responsive handbrakes, which are easy to use for small hands. Transmission – how fast will the bike go? For children aged 4, 5 and 6 years, the runs are just too much and running bikes and manikins are not available on 16-inch bikes. However, the gear of the bike is still worth considering. In the world of cycling The ratio refers to the gear of a single-speed bike and is often used to determine how difficult it is to pedal a bike. High gain factors (3.7+) are harder to start pedaling, but can more easily maintain higher speeds. Lower gain factors (3.3 and less) are really easy to start pedaling, but they can't reach high top speeds. The gain factors in the middle do a little bit of both! For 16-inch bikes, we prefer an average range of gain factors from about 3.3 to 3.7. Price – What gets a more expensive bike from me? Good bikes are not cheap. Every bike on this list is much better than the bike you'll find at Walmart, but it also costs more. Why? It's not easy to make a great, high quality, but lightweight bike! There is a reason why some adult bikes cost more than a car. Finally, after testing over 30 different 16-inch bikes, we can safely say that high-end bikes are much easier to ride for kids than cheap bikes found in big-box stores. While every bike (no any safe bike) is better than any bike, if you want your child to start their bike journey with a smile on tears and frustration, we recommend splurging on a nicer bike whenever possible. High-end bikes also typically have great resale values, with many reselling for nearly 70% of their MSRP. Comparison table: 16-inch bikes for 4 and 5 year olds Training wheels: 10 FREQUENTLY ASKED QUESTIONS: If you're considering training wheels, read this first!
