In one-eighth of these components taken to a fundamentally new level, they have become even better. However, there are negative moments, but about them later. Now, different cheaters appeared in the app, which gives the rider the ability to perform in-flight stunts. Therefore, before takeoff, you can start turning around, as a result of which the car will turn in the air. In the curved jumps the car will make a barrel. As you can see, in Asphalt 8: Airborne, developers have gone through realism. Management has not changed, as before, you have the right to choose keys, accelerometer, screen steering wheel and some other control options. Cars in the app are licensed, there are almost all the most common racing cars. The game is satisfied with its interactivity - your vehicles can break. Based on nine locations, more than fifty varieties of tracks are created, which become larger and add more branches. Now we mention two main drawbacks. The first is the imbalance of the single player campaign. In the latter part of the game it was possible to deal with without additional purchases, now it is extremely difficult to do so. Opponents have more powerful engines and drive significantly faster. Developers are clearly pressuring the player either for donat or to score points in multiplayer races. The second negative feature is weak optimization. Even on higher devices, the app slows down noticeably, demonstrating a low FPS value. However, the last defect was fixed with the release of many updates. However, Asphalt 8: Airborne turned out to be a worthy continuation of the famous game series.
