Business objects webi tutorial

Learn why it's business acumen for business intelligence users to strengthen themselves with discovery tools and become an analytics explorer. Getting E-Book Like all SAP projects, an SAP Webi (Web Intelligence) project requires a lot of preparation as well as preparing the end user.   As an SAP Webi Project Manager, or webi consultant, you need to show your users how to make the system sing and dance. As it happens, we've done this a few times already, and have been able to put together a comprehensive SAP Webi end-user training guide that you can use to teach your users the following: You will get a comprehensive 12 part guide in this SAP BO Web Intelligence Tutorial Series SAP Business Objects Web Intelligence Tutorial Includes: Business Objects xCelsius Overview Business Objects Web Intelligence Overview InfoView Directory Structure Creation for Users How to log in InfoView Understand SAP BO Webi Webi Reports - Step-by-step How guide Create new Webi Query & Report Toolbars Sort Data Save Report Sum Data GroupData Create Formula Improve SAP Webi end user acceptance Each of these topics is covered by the core official training, but not from the perspective of the end user. This training document offers great value to any SAP Web Intelligence Implementation team as it takes someone who has little or no dashboard experience and shows them how they can take spreadsheets and a large number of other source systems, and create highly interactive dashboards, quickly, easily and cheaply. This means that you will be able to overcome what is widely perceived as the number one destroyer of value from business intelligence systems—lack of user acceptance! SAP Webi Requirements Collection is critical to success To really take your SAP BOBJ Webi Dashboarding to a new level of excellence, we also encourage our customers to concentrate on getting their requirements right. But what do correct requirements mean? Really nothing new here, but we've developed a database that allows you: Define each KPI Record and track the process taken to come to an agreement on the meaning of a KPI across Strategic Business Units Provide complete track and track ability of all your KPIs Tracking data sources, required transformations and destinations Show who owns each KPI, and associated business position (because the names change while the position remains the same) Keeps track of the status that webi dashboard elements have completed and who remains, which allows you to estimate the remaining project time. Allows the assignment of targeted values to each KPI along with warning intervals and who sets them up. A roadmap for the construction of your universe All these specific business requirements functions serve many important purposes, however, a critical functionality is that it a roadmap used during the construction of your universes, which in the case of this project was the primary data source, but required extensive work. The beauty of this guide is that it is easily transferable to any xCelsius dashboard project, at least at an abstract, best practice approach level. As SAP develops its products, we clearly see overlapping project requirements and therefore wanted everyone to have this universally applicable guide. Thanks, Learn what SAP Business Warehouse is and what it does in under five minutes Web Intelligence, business intelligence reporting tool, is part of sap businessobject's product suite. This is a handy tool for business users for analytical and ad hoc reporting. Web Intelligence enables business users to create basic, medium, and complex reports from transactional data in the database to meet business requirements. This tutorial explains the key concepts of SAP Web Intelligence (SAP Webi). Audience This tutorial is designed for all those readers who want to learn the basics of SAP Web Intelligence and implement it to analyze data using BI Launchpad and Webi. Prerequisites You must have the skills to dig up the relevant data and analyze it in order to create professional reports. Reports.
