This post is now about 8 years and 8 months old. Please keep this in mind as it may very well contain broken links and/or outdated information. [I apologize for using rabbit hole three positions word in a row! -windracer] Obviously I have one thing to do homebrew stuff in April: almost exactly two years after my Wii made soft so I could load my game from a USB hard drive instead of disk, I found myself wondering if I could do the same for virtual console and WiiWare content. Well, of course you can! The path can be confusing and frustrating, but the destination ... Well, it's a good destination. I'm very happy with my USBloader GX setup, but it occurred to me that since my Wii always boots straight into the loader (thanks to the downloader), I was ignoring my VC and WiiWare games! Later a quick Google search and I found it to create ISO forwarders to play content like disk-based games. While the guide itself is very clear and detailed, it still took me a few hours to wrap my head around the process and get everything functional. Since it was a while since I lasted my Setup was touched, I first: so I followed the steps in the guide to make one Of my Wii NAND, it extracted, and put it on a different partition of my USB hard drive. Then I created ISO forwarders for my virtual console and WiiWare games, and added them to the loader. The snags I ran in were: in addition to the WBFS partition on my USB hard drive that includes all my games, I had an XFAT partition created by Windows 7 that I was using for additional storage. I had to improve that as FAT32 (using EASEUS Partition Manager) so that the extracted NAND folders could access the Wii. I also had to put the NandGames folder on the root of my SD card (instead of the hard drive), otherwise I didn't get Loader.dol getting the error when getting a VC/VC card. I also ran into the SD card lock switch problem again. With all the back and forth I was able to make moving SD card between wii and my PC, lock switch never went down so slightly. It wasn't enough to read the SD card—only on my PC (which is why I didn't notice at first) but it was enough to cause weird problems with some homebre apps like d2x cIOS installer to freeze it. I thought I had actually screwed something up until I notice the lock switch happened and solved that problem. After all that, though, check it out! (I had to make that 3D box art for the magician God on the far right by myself... Others were automatically downloaded by usbloader GX) just having game icons in the loader doesn't mean they'll actually run, however, so the next one I had to test each one. Only two of my games just didn't work: Wizard God and Goal Toss Pro: Bag. Wizard Lord, my only neo-jio VC game, will load but won't show any videos. The game was still going on, I could hear background music and even start and play the game, I just couldn't see anything. If I pressed the Home button on my Wii remote, the video would appear behind the Wii system button. this issue became a necessity . Following the instructions, I pressed Z+A+2 in the Operations Guide for the game and fixed it! But getting the bag to work when the rabbit hole appeared.. I And I fell into it. After hours of messing with various iOS base version and slot combinations, loader settings and reading platform threads, I couldn't get this game to run from NAND extracted through the loader (and still can't). I'd get health and safety screens, and then incredible technologies and n space load screens, and then just a black screen and Wii would hang. I also tried mighty channels and, but the game wouldn't work through them either. It didn't help that the bag apparently doesn't have a very popular WiiWare title: I can only get a connection to run through a loader with no details with a mention of it. In the end I just gave up before I screwed up the other 99.9% of my games that work. If any Got this game to work through a loader with an ISO forwarder, please leave me a line in the comments! UPDATE: I've been making it work! This post is for all NTSC and PAL region virtual console games, only actual released games are not injected here.
