Stay safe on public Wi-Fi!Flip once and forget about it – the app will automatically connect to the VPN every time you sign in to a Wi-Fi network. CyberSec protects you from malware and other cyber threats. Go advanced without hassleSEmsometimes you need to take an alternative route to regain your freedom on the internet. We support you. Switch between protocols depending on your preferences for connection speed and reliability. Add an extra layer of security by connecting to the Dual, P2P, or Onion VPN servers over VPN. FAQ On Android, a VPN is useful for several reasons: encrypts your data, protects it from hackers, and can circumvent geo-restrictions and Internet censorship. It does this by routing your internet traffic through a remote server and hiding your IP address in the process. In addition, NordVPN has additional features such as CyberSec – detects and protects you from entering malicious websites. If you download the .apk version, it will also block annoying ads. A NordVPN account can cover up to 6 devices and works on both your phone and Android TV. It's no secret that Android devices have had some history with malicious attacks, so a VPN is a must. Stay safe! Setting up NordVPN on Android couldn't be easier – just find it in the Google Play Store and click Install. If you are already a NordVPN user, simply log in with your details. Otherwise, click the Subscribe button. If, for any reason, you are unable to access the app on Google Play, the .apk is available on our website. Once you install and log in to NordVPN, using it is a piece of cake. Just open the app and click the Quick Connect button. NordVPN will connect you to the best server available. If you are looking for a particular location, you can connect to a specific server by clicking one of the countries in the list pane. Don't have an account yet?
