Solar System for Kids Solar System Lessons Solar System Plan Literature System Solar Mathematics System Solar Guess Solar System Reads Solar System Understanding Solar Solar System Searches Space and Star Moon The Sun Uranus Venus This is the week of 5 units of our solar system. As we wrap things up in our astronomy for children's lessons, this week we'll learn about Stars for Kids plus Pluto's dwarf planet, comet, and asteroid belt. We have included a lot of fun, hands on constellation projects, science activities, and more to teacher children from kindergarten, first grade, 2nd grade, 3rd grade, 4th grade, 5th grade, and 6th grade student about our planet's amazing galaxy. This is the last week in our solar system unit. We've had fun hand-held on science projects and learned so much along the way. (mom too!) This week we focused on the dwarf planet Pluto, the space rock and the Asteroid Belt, Comet, and Stars for Kids - plus the star patterns or constellations they make. Whether you're a parent, teacher, or homeschooler - you'll love this interesting science for kindergarten, grade 1, grade 2, grade 3, grade 4, grade 5, and grade 6 student. Kids won't see night skies or images from the same space again! We just love making educational activities that make FUN learning! Pluto for Kids Pluto is a small planet that after the 2006 International Astronomical Union decision is no longer a planet. Until this point we have known very little about this dwarf planet on the outer edge of our solar system, but in July 2015 the New Horizons spacecraft arrived there after a 9 1/2-year voyage to further explore this curious planet. Since Pluto is so cold we make ice cream in a bag. (complete ice cream instructions in the bag) The science behind this experiment is rock salt helping to lower the freezing point of ice cream. Comets, Asteroids, and more! When reading about coma and asteroids we learn a little about the millions of space rocks that orbit our sun, many of which are on the Asteroid belt between Mars and Juveniles. We learned that the other word for commuters was a dirty snowball because it was a mixture of dirt and ice. We discussed some well-known comets (Halley comets, Hale-Bopp, etc.) and others that wouldn't be back in our lifetime. We found that unlike planets with the most spherical orbits, comets and ellipsoid orbits. We learned that most meteors were burned in the atmosphere of the earth and appeared to be shooting stars from here on earth. There is a place in Antarctica where the land is closed with 10,000 meteorites. Did you know that the Belt maybe it has been another planet? This is called the planet's hypothesis exploding and may have been the most interesting thing we learned. Stars for Kids Did you know that stars are objects that are something like our sun? Or that star is actually beyond our galaxy? Dear cloudless nights with new moon you can see 3,000-10,000 stars. Stars are categorized by how hot/cold and bright/dim they are. We are surprised to know that our sun is a G-5 which means medium temperature, and a medium dim. Learn about constellations with constellations this free printable star for children. Children may be surprised to learn that you can't see the same constellations all year round, but as our earth's orbit, we get a different view of the stars. Those of us in the Northern Hemisphere though can always see Little Dipper and the Northern Star called Polaris. Constellations for Kids! show them this is simple, but a meaningful example. Each part of the drink's umbrella has different holes poked. Then I roughed pulling the earth in the grapes and stuck an umbrella trunk wrestling it. We are located North America and parts of the sky on it. Our conscious kids will not be able to look back through the earth to see the back of the sky. Then we twisted the grapes and they were able to describe how our ever-moving earth got a new look of the sky all year round. CardsOur PrintAble Constellation Project favorite project has made this constellation projector. It is a fun science project that allows children to see constellations in our own dissurgent planetarium. To make your own, you need to: boxflashlightscissors & tapefree Printable Constellations Mini BookNow cut the pages from the constellation of minibooks and use a star hole shot to punch big stars (brighter). Use teeth to make a little hole where small circles are for smaller stars. Next you will cut the hole in your box and the constellation tape you want to see first. Now insert the flashlight on the opposite side of the box (depending on the box you're using, you may need to make another hole). Make sure all the holes and other cracks are closed/sealed so that the light will be forced through star patterns. Shine your constellation projector on the wall in the dark room for a stunning on the planetarium of the house! HINT: Sorry the stars looked like they had a shadow in the picture, that's just because of the sludge speed I had to use to get the darkest picture, projector won't create shadow stars! SolarLooking System activity for more fun, hands on science activities to teach children about astronomy or to siege your solar system for children's units. You'll love this hand on solar system activities and lessons: Sun for Kids Of the Moon for Kids & Astronauts Toolinner Planets for Kids (Mercury, Venus, Earth, Mars)External Planet for (Mysytari, Zuhā, Uranus, Neptune) Pluto, Asteroid Belt, Comet, and StarsYarn Solar SystemPaint Stick Solar SystemProjectPipe Cleaner Buruj - fun hands on buruj activities for children you will love 50 Moon Craft & Activities for Kids collection with the best ideas from all over the internet! TONS The idea of a really cool Solar System Project for children of all ages Solar Free PrintablesPlus System, don't forget to add to this free solar system worksheets and printable for your lesson plans: Fun Science for Kids Here's a great way to teach your kids more about our solar system. This workshage focuses on the dwarf planet, Pluto. Pluto is still a mystery to us because it has never been explored by the spacecraft, but you can learn what we know in this dwarf planet works sheet. After reading all about Pluto, the kids tested their knowledge with some fun activities. See the other Know Your Planets series here. Assign for the collectionAssign digitalCommon Core State StandardsTexas Essential Knowledge and Skills (TEXT)Virginia Standards of Learning (SOL)BC Performance StandardsAlberta Australian Curriculum Review Program (ACARA)Victoria Curriculum (F-10)No standards relating to this content. Which Objects Are Planets? Cut picturescards and sort them into two categories: planets and not planets. Described objects include: Earth, Musytari, Sun, Moon, Mars, Neptune, space shuttle, comet, and satellite. Kindergarten to the 2nd Grade Works (Level: Intermediate)Solar Cut-and-Glue System Cut definitions and glue next to the object of the corresponding solar system. Words include Mercury, Mars, Earth, Venus, Lectures, Asteroid Belts, Moons, Sun, Neptune, Saturn, and Earth. This is a wonderful seasonal poem about Harvest Moon. Read poetry, answer the understanding question, then learn about Harvest Moon. Neil Armstrong - Coloring PageThis page can be printed has a portrait of Neil Armstrong. Students can color the pictures. There was also an excerpt by Armstrong at the bottom of the page.2 through the 7th Grade Buzz Aldrin - Coloring PageColor Buzz Aldrin, and reading inspirational quotes. Use with research reports or decorate classroom bulletin boards.2nd via 7th Grades Sally Ride: Coloring pageThis worksheet contains photos of Sally Ride that students can color. Inspirational excerpts from Ms. Ride are included at the bottom of the page.2 through John Glenn's 8th Grade - Coloring PagePrint and the color of this picture John Glenn, the first American to Earth Orbit. This activity includes significant quotes and interesting facts. 2nd through Grade 7 Also on Super Teacher Worksheets...
