Wayne dalton idrive keypad programming

Modified on: Thu, 8 Jun, 2017 at 4:58 PM Q: Can I use my transmitter (remote) from another opener with the Wayne-Dalton opener? Q: Do you have a one-button transmitter for a classic Wayne Dalton 3012 drive model? Q: The door hesitates during trips down when activating my wireless driveQ: Remote hand command (Transmitter) will not program. Q: How do I make my Wayne Dalton Classic Drive model 3012, 3016 Opener work with my built-in car remote? Q: How do I program my wireless photoelectric sensors? Q: How can I schedule two transmitters in the same opener? Q: How many garage door openers can I program with a keyless input keyboard? Q: How many keyless entry pads can I program in my drive? Q: How to select the correct remote control or KeypadQ: I lost the instructions for my numeric keypad. Wayne Dalton 303 mhz. Can I get them out of you? Q: I have programmed my wireless photoelectric sensors. The carriage travels a short distance from the open position and reverses. Q: My garage door opener will work using the wall button in the garage, but the remote control for the car won't work. Q: Weather damage - Warranty? Q: What is the wire indicator used for connected photoelectric sensors and pushbuttons? Q: What is the purpose of configuration A, B, C in wireless photoelectric sensors? Q: Which remote controls are compatible with classic Unit 3012 and 3016? Q: Which remote controls are compatible with classic Unit 3012? Q: The wireless wall station will not program. Q: Can I use my (remote) transmitter from another opener with the Wayne-Dalton opener? A: No. Only Wayne-Dalton transmitters will work with a Wayne-Dalton opener. Q: Do you have a one-button transmitter for a classic Wayne Dalton 3012 drive model? A: The version of a button is no longer manufactured. The only replacement remote control for your opener is the Wayne Dalton 3-Button Full Size Remote Control. Q: The door hesitates during trips down when activating my wireless drive. A: The cause is weak batteries in their wireless accessories. Replace the batteries in both photoelectric sensors and the wall station. Q: The hand remote control (transmitter) will not program. A: If your transmitter has a green LED, be sure to follow the changing transmitter code (see the Programming Transmitters section of this website). TIPS: 1) Disconnect other garage door openers or any signal transmission device in the garage. 2) Make sure the green LED is solid before blinking during step 2 of Change the transmitter code. Q: How do I make my Wayne Dalton Classic Drive model 3012, 3016 Opener work with my command on of the built-in car? A: We have a Homelink Conversion Kit 1 that will make your openers compatible with your vehicles. HomeLink Conversion Kit Q: How do I program my wireless photoelectric sensors? A: Programming: Set sender to align (green transponder LED must blink). The program switch must be pressed and maintained (if the status LED is not on) until LED LED status flash or pressed and released (if status LED is already blinking). You can also consult the manual section of this website. Q: How can I schedule two transmitters in the same opener? I just got 2 transmitters for the opening of the Wayne Dalton Quantum Gate. I have a correctly programmed transmitter. How can I correctly schedule the other transmitter to operate with the garage door opener as the 1st. Basically, how do I get both on the same code frequency to open the door? One for my wife's car and the other, of course, for me. A: Repeat the process you used to schedule the first remote control of the second. Q: How many garage door openers can I program with a keyless input keyboard? A: You can schedule up to four (4) garage door openers for keyless entry pad. Q: How many keyless entry pads can I program in my drive? A: You can only program one (1) keyless input keyboard per unit. Q: How to select the correct remote control or Keyboard: To select the correct remote controls, keyboards, wall stations and control panels for your Wayne Dalton Classic Drive garage door opening you will need to know the model/serial number of your garage door opening (Quantum 3212, etc) or radio frequency for your opener (303Mhz or 372Mhz). To find the model number look at the sticker on the back of your powerhead opener garage door in the garage. To find the radio frequency look on the adhesive on the back of a remote control operating the opener or on the adhesive at the back of your powerhead opening garage door. Q: I lost instructions for my numeric keypad. Wayne Dalton 303 mhz. Can I get them out of you? A: Below is the web page with instructions for the numeric keypad. You can download and print them. Q Keyboard instructions: I have programmed my wireless photoelectric sensors. The carriage travels a short distance from the open position and reverses. A: You must attach the garage door for wireless sensors to work properly. These sensors are activated by door vibration. This helps conserve battery life because sensors only turn on when the door is activated and moved. Q: My garage door opener will work using the wall button in the garage, but the remote control for the car won't work. My garage door opener will work using the button on the wall in the garage, but the remote control for the car won't work. I've changed the battery and it still doesn't work. How can I determine if my problem is on the remote control or the operator? Classic Unit Model 3012. A: First try resetting the opener by disconnecting the from the wall socket. Wait 2 minutes and connect again. Try remote controls. If that doesn't work you try to reschedule your remote control to the power manager using the steps below: Programming Transmitter to Power Head Unit Press the PROGRAM button located in the garage door engine head drive once. The state light of the program in the engine head unit turn on and hold for a minute, indicating that you are ready to learn the transmitter code. Press the transmitter button. The state light of the program will be turned off indicating a successful learned. Press the same transmitter button once again to operate the door. If you are unsuccessful in programming the transmitter in the engine head unit or if the button does not operate the door you probably have a faulty engine control panel. A replacement plate is located on this website: Wayne Dalton Classic Drive Control Board Q: Weather Damage - Warranty? A recent electrical storm (or other act of nature) affected my garage door opener, along with other appliances in my home. This is covered by the product warranty. A: No, acts of nature are not covered by the product warranty. However, consult your owner insurance. These policies often cover harm due to acts of nature. Q: What is the wire indicator used for connected photoelectric sensors and pushbuttons? A: Wiring of 22 calibers is used for our units. Using a different wiring meter could disrupt the smoothing of the unit. Q: What is the purpose of configuration A, B, C in wireless photoelectric sensors? In: Transmitter: Vibration Sensitivity Jumper Switch sits under a battery on the emitter (red LED), A=More sensitive, B=Normal, C=Less sensitive. The benefit of setting C is longer battery life. Transponder: The channel selector for additional doors/units is under a battery on the transponder (green LED). Use different configuration options for various transponders. Q: Which remote controls are compatible with classic Unit 3012 and 3016? I have a 2 button remote opener for a Classic drive, 3012 Series, 3016 opener. I need an extra unit. We have 2 garage doors that need to operate in the opener. Can you let me know which opening model do I need to ask for? It is a 303Mhz. P. opener: Which remote controls are compatible with the Classic Unit 3012? I bought a home where the previous owner didn't get out the door of the remote control garage. It's a classic 3012 unit. I saw remote controls on their website and would like to buy them, but I would like more information about making sure the previous remote controls will not be able to be used. Will the new remote controls have instructions on how to make any other remote controls unable to be used for security purposes? Wayne Dalton remote controls come with instructions to schedule the remote control to his garage door opener. You have to program on the remote controls Purchase until 8 positions have been used before crashing all previous scheduled remote controls in the opener. In other words, the garage door opener has in memory 8 different devices (remote controls, keyboard, wall station) and until you use all these positions with your new remote controls, any other programmed one can still work. There is no way to clear memory.... so just schedule it in, and start and do it again. The instructions that come with the remote control should make it clear to you. Q: The wireless wall station will not program. A: If you have a green LED on your wall station, be sure to follow the changing transmitter code (see the Programming Wall Stations section of this website). b) If you have a red LED on your wall station, just follow the wall station programming instructions. This Wayne Dalton KEP-3/ 309964 / 327308 model is a keyless wireless/input controller keyboard. This elegant 5-button unit works with Wayne Dalton Classic Drive garage door opening models using 372 MHz radio frequency (The receiving antenna cable will be yellow or white). If your remote control is any of the following units, this drive will work with your opener: KJ8KYE-372BSW, KEP2-0000, 288830, 327310 or 300643. Compatible with the following Wayne Dalton Openers: iDrive, iDrive Torsion, DoorMaster and ProDrive series of garage door openers Classic Drive model 3014, 3018, and 3514 Quantum Model, 3214, 3314, 3316, and 3414 Details: - Open/Closed Doors with Simple PIN - Controls up to 3 different compatible doors - Includes lithium battery - Easy programming and installation - Programming instructions and mounting hardware - Includes manufacturer 1 year warranty - Dimensions: 4 for 2 by 1 inches
