Yamaha rx-v679 manual uk

MusicCast is the revolutionary new system in audio networking systems, using your MusicCast products simultaneously or separately, it's completely with you. You can control everything from one app, which is intuitive, fast and simple to use. Use soundbar, wireless speaker, AV receiver, HiFi audio to mix and match whatever is best for you, then expand your MusicCast system. New to Yamaha, the MusicCast system takes everything for everyone everywhere. For more information, visit the Special MusicCast page. MusicCast features high performance in wireless network systems that allows you to fully enjoy your music and audio. Allows you to share digital music content from your smartphone, PC or NAS to other MusicCast devices. It allows you to share music connected to RX-AS710 from external devices such as TV or BD player. Audio content from Bluetooth smartphones or tablets can also be shared across MusicCast devices in multiple rooms. This AV receiver is equipped with Bluetooth so you can easily play music wirelessly from smartphones and other devices. The Yamaha Compressed Music Enhancer system is now optimized for streaming audio via Bluetooth, with wireless playback in your music also feature fast and dynamic sound. The RX-AS710 is equipped with the latest Bluetooth technology, making wireless operation more convenient than ever. You can stream music from RX-AS710 for private listening or Bluetooth headsets for Bluetooth speakers. This AV receiver fully supports with the latest HDMI standards. Thanks to 60 frames per second via video transmission, you can enjoy 4K high definition video quality without degradation. It also complies with standard HDCP2.2 copyright protection for 4K video transmission.3D this means that the receiver can manipulate 3D signal data. , without the need for an additional optical cable. The Wi-Fi built-in feature allows wireless connections with your home wireless router, simplifying system connections to enjoy network audio and music streaming services. If no Wi-Fi router is available, the only direct wireless feature not only allows you to stream music directly from your smartphone or tablet through the Play Music feature of the AV Controller app, iOS Airplay, etc. but also controls your receiver using the AV Controller app. This AV receiver provides a variety of network functions that allow you to access Also improve source and management. You can connect your home network or internet to receivers to enjoy Pandora's InternetRadio ®, Spotify* , * JUKE, Napster ®, Rhapsody ®, SiriusXM® or stored music NAS and a PC at home. The AV Controller app (from iTunes App Store or Google Play) lets you control the various functions of your iPod, iPhone, iPad or Android phone/tablet. * The availability of music service varies according to region. This AV receiver allows you to use the Yamaha AV Controller app which is available for download on iTunes AppStore or Google Play, on/off and to control volume, select input and DSP mode and manage other functions of iPhone or Android devices. You can also use 23* in different languages and customize the interface to hide unused icon and renaming functions. A tablet version is also available. This AV receiver is equipped with a variety of sound programs using Yamaha's original DSP technology. They allow you to easily create sound areas like real theatres or concert halls in your room and enjoy stereoscopically natural sound areas. Now you can use the AV Controller app to adjust the DSP parameters to your choice to match the type of music/music you want to do. There are two modes, basic and advanced, which you can choose according to the type of adjustment you make. Use your smartphone or tablet with the MusicCast Controller app to operate the speaker and change the settings quickly and easily. Also functions similar to controller apps as a remote control for all your compatible MusicCast devices. This AV receiver supports AirPlay, meaning they can accept iPod touch, iPhone or iPad, as well as Macs or wireless music streaming from iTunes on PCs. It makes it easy to enjoy music from your computer on your home theatre system or mobile devices. You can use visual metadata such as song titles, artist names, as well as album art* through AV receivers on the screen. * Some models do not support album art exhibition. With Spotify's application on your smartphone, you have instant access to millions of songs. And now you can stream these songs to your Yamaha system using Spotify Connect. Just press play to start streaming music. Especially when you hear on your smartphone coming in immediately and being streamed to your AVR outside of the song – as if it's magic, you like the original music. You can also customize playlists and receive calls while listening to music. * Premium account and The app is needed. Visit spotify.com for more information. Try Spotify Premium for free on your Yamaha home entertainment system for 30 days. Spotify depends on service availability areas. JuKE Music Streaming Service provides access to one of the most complete music libraries in the world. More than 30 million songs from over 80,000 labels of all genres are available to you. Enjoy your favorite songs in the best sound quality thanks to Dolby Pulse technology and play music wherever and whenever you want. JUKE is available as a premium subscription service at 9.99 Euros per month. For more information, visit myjuke.com. A USB port on the front panel allows convenient connection of an iPod/iPhone, which also charges when connected. Because digital signals from the iPod/iPhone are transmitted directly to the AV receiver, there is no loss of signal or interference, so you can enjoy the best possible sound quality. Also, you can use the receiver's remote control unit to manage iPod/iPhone music playback functions. This AV receiver is compatible with many audio formats such as Dolby True HD and DTS-HD Master Audio. It is also compatible with high resolution audio codecs like DSD/AIFF/FLAC/Vu/Applle Lossless. You can enjoy excellent sound quality and various high resolution audio codecs from USB and content networks. Many live albums and classics have no lag in music. Continuous playback ensures that there is no pause between audio files. It offers seamless playback, the way it had to be heard. * COMPATIBLE with WAV, FLAC and ALAC file formats and USB/PC/NAS input. The concept of total purity, on which Yamaha has worked for many years, covers rigid high-tech amp, pre-amplification technology, high purity anti-vibration and independent pure power supply. All models have a completely discreet power amplifier that helps to reduce distortion. They also adopt independent pure power supply, allowing dedicated power supplies to analog and digital circuits to prevent digital noise affecting analog circuits. Anti-vibration heatsync transistors are designed to suppress vibration and sound pressure. The free power supply for DACS is designed to continue to reduce noise in some models. All details, these AV receivers are designed with total emphasis for the highest possible sound quality. This AV receiver has been designed with a strong focus on achieving exceptionally high sound clarity. It employs an amplifier configuration and a less nervous PLL circuit, which contributes to its excellent performance and audio. AV Configuration Guide is an app that makes receiver installation very easy and also helps with cable connections between AV receivers and source devices. Guide you through various settings such as speaker, TV and device source connection and power amplifier assignment. The system images and actual images of av receivers help you understand how to make a connection between devices, much faster for system configuration. It is available in many languages. Designed for iOS and Android tablets. Yamaha's latest graphical user interface has a high resolution with easy-to-access, easy-to-use menus and also includes a selectable status bar that shows input source, volume level, DSP mode and audio format. GUI offers a choice of eight languages: English, French, German, Spanish, Italian, Russian, Japanese and Chinese and more general and 3D photos can be displayed. Press a visual power button on the AV receiver and select the input source and DSP mode. You can reset the button by selecting a source and DSP mode, and then press a view button for more than three seconds. Another benefit of HDMI is the availability of CEC functionality. When the unit is connected to a CEC-compatible TV, it will rotate with and off the TV, and you can use the remote control to control the volume. CEC also provides advanced functionality with other components. For example, you can use receiver remote units to control player functions such as skips and stops. * All connected devices must be HDMI CEC compatible. Some compatible CEC TVs/players may not work. YPAO-R.S.C. analyzes the acoustics of the room and measures the different characteristics of the speaker and then calibrates the audio parameters to achieve optimal sound. Studios are employed to accurately correct the initial reflection for quality sound reflected sound control. It also provides DSP effect normalization, which changes the parameters of cinema DSP according to the reflected sounds. The human ear has a low sensitivity to high and low frequencies, especially in small amounts. Volume changes such as YPAO applies volume sound EQ improvements to automatically adjust high and low frequency levels. Using YPAO measurement results, EQ improvements are optimized for your system settings and sound environment. Cinema DSP 3D offers a wide, loud and dense sound area. Decoding HD audio format allows you to enjoy HD audio sources. Virtual presence provides a three-dimensional sound without the actual use of the speaker Appearance. The Virtual Presence column uses the function center in full and surrounds the columns to create virtual presence columns. Enjoy surround sound, cinema DSP 3D mode is limited even in environments where installation of speakers. In addition, this model also has a virtual back surround speaker function. Even without using the rear surround speaker, you can experience the most natural sound behind you. Even when it's impossible to install speakers behind listening conditions, Virtual Cinema DSP only plays a 7-channel virtual surround sound filled with realism of two front speakers. The Virtual Cinema Front feature allows you to have two surround speakers and one center speaker in the front to enjoy a 7-channel virtual surround sound with superior quality and resolution as well as top virtual rear sound location. Adding two additional front appearance speakers provides a three-dimensional sound area that gives a sense of depth of your height and vertical sound movement. You get more flexibility to organize your speakers inside the room with easy enjoyment of high-quality surround sound. The special low-end Yamaha enhancement technology delivers more expected bass than richer than column sizes while maintaining good location and sound balance even with compact front speakers. When a subwoofer is used, which improves the volume of the entire low range of column systems, strengthens not only the front speakers, but also the bass of the subwoofer. You will enjoy video and music with appearance and sound that has extraordinary power. When music is encoded with a digitally compressed format such as MP3, the frequency response is affected. Yamaha's compressed music enharnack employs sophisticated digital signal processing using unique algorithms that have been lost, so music always does the same way it should. The Stop Subwoofer control increases the lower frequencies, avoids overlap with the front column output. This will result in cleaner, more focused phase sound, providing a splicing frequency response. When the subwoofer frequency overlaps in traditional systems, the overall sound is pushed towards the subwoofer. The subwoofer trim takes care of the current by separating low frequencies and clean subwoofer, thus providing a well-balanced extended with bass sound, to stabilize the front phase. Intelligent AMP Assign automatically assigns amplifier channels to some speakers based on selected tasks. For example, on a 7.1-channel system, when zone 2 is disconnected, all 7.1 channels in the main area will be used. However, when in Zone 2, two surround channels will be directed to two pillars in power back zone 2, and the main area will receive 5.1 channels of electricity. Similarly, when cinema DSP 3D presence is on two front speakers that will be fed and not back-around speakers. When Cinema DSP 3D is turned off, the situation is reversed. Thanks to intelligent AMP assign, there's no need to change the speaker cable behind the receiver – another way for Yamaha to make your life easier. The consumption of electricity from Yamaha's new eco-mode has gone down by about 20%. It can be set from the top of the GUI menu. * Compared to power consumption when Eco mode is turned off (Yamaha measurement). Auto Power Standby allows you to save energy by choosing to turn it off after 20 minutes, 2, 4, 8 or 12 hours. Hours.
