## This glassy egg is too hot to hold with your bare hands.

in: Edit Share Can't find the dragon you're looking for? Before you ask for it, see if it was recently published on the Current Published page. In the hunt for new eggs in the different habitats of the Dragon Cave, users are presented with a series of mystery eggs. These eggs all show a black egg with a red question mark on it and are only recognizable by their written description. This guide is designed to help users identify eggs they can find in the game. Some descriptions are shared between several eggs. These descriptions are included in the following lists. More helpful identification pages: All year kites[edit | Source Editing] These dragons can be found all year round in habitats, by breeding or by using certain breed-specific actions. Wintertide Leetles[edit | edit source] The Leetle Tree is currently the only blood le available. It appears as a frozen egg on the user's scrolls and cannot hatch or mature. However, the sprite shown by the Leetle Tree changes with the season and for holidays. The description of the Leetle Tree is: Oh my. Under the eggs there is a leech tree. Sprite Season or Holiday Date Valentine's Day February 14 Spring Vernal Equinox Summer Solstice April Fools' Day April 1st Day of the Earth 22 April Summer Summer Solstice – Autumn Equinox Autumn Equinox – Winter Solstice Halloween October 31 Winter Winter Solstice – Vernal Equinox Christmas December 25 Notes[edit | edit source] source] Deep sea and shallow water dragons. However, shallow water dragons can only be produced by breeding and do not appear in the cave. The description of the Feuergem egg is updated to include the color of the crystal when the egg is accepted. The color of the ice is determined by the hour in which the egg is created. 3.0 3.1 This description is shared by Pink Dragons and Flamingo Wyverns. 4.0 4.1 4.2 4.3 This description is shared by Ochredrakes and Horse, Frilled and Skywing Dragons. 5.0 5.1 This description is shared by Stone and Geode Dragons. However, geodes can only be produced by breeding and do not appear in the cave. • Harvest dragons migrate biomes based on the season. In winter they appear in the Alps, while in all other seasons they appear in the forest. 7.0 7.1 This description is shared by Sunstone and Moonstone Dragons. 8.0 8.1 Avea Pygmies and Rift Wyrms rotate habitats per hour. 9.0 9.1 This description is shared between Shimmer Scale and Tinsel Dragons. 10.0 10.1 This description is shared by Silver and Peace of Soul Dragons. Soulpeace dragons, however, can only be preserved by breeding and will not appear in the cave. 11.0 11.1 This description is shared by Spitfire and Striped Dragons. • Striped dragons stolen from the cave are always the white variant. Other colours can only be produced by breeding. 13.0 13.1 Sunrise and Sunset Dragons hatch from the same egg. The breed is determined at what time the egg hatches. Vampire Dragons, technically a Halloween dragon, can be produced all year round. 15.00 15.01 15.02 15.03 15.04 15.05 15.06 15.07 15.08 15.09 15.10 15.11 This description is shared by most Xenowyrms. The variation depends on the habitat and the elementary orientation. • The variant is determined by Biome. For more information, see Pargulus Pygmy. 17.0 17.1 Day Glory and Night Glory Drakes share the same egg sprite and the same description. The breed is determined by the time in which the egg is produced. 18.0 18.1 This description is shared by Blue Dinos and Purple Dinos. Community guides and introductory content are available under CC-BY-SA, unless otherwise noted. **Noted.**
