Showbox latest update apk download

Microsoft Windows 10 may be around the corner, but the company is still issuing Windows 8.1 updates on a fairly regular basis. If you're already using Windows 8.1 and you're not sure you're running the latest system update, the best way to check and download it is to visit the PC settings (the new control panel, available from the right menu bar) and click Update and Recovery. There is also the option to download the latest windows 8.1 update as standalone files, if you want to archive them or perform an offline or corporate installation. If you haven't already installed the latest system updates, you should do so — Microsoft said users won't get security updates if they stick to older versions of Windows 8.1. To continue receiving security updates, you need to make sure you run the latest version of the OS. How do you do that, for free? Just follow these simple instructions. How to download and install the latest Windows 8.1 UpdateAs we mentioned previously, the quickest way to get the latest update is to use the control panel pc settings. If you do this, move on to the section at the end of the story with tips on how to make the most of it. If you want to download the standalone files, however, read on. As always, we need to preface this with the usual caveat: Downloading Windows updates using unconventional methods is risky. At the very least, you need to make sure that the SHA hash of downloaded file matches using the Microsoft File Checksum (a free tool). If you have important documents on your computer, you need to support them, too (this should be an unnecessary precaution, however; updates are just a bunch of fixes, rather than a full reinstall). Use the following links to download the right version of Windows 8.1 for your computer's architecture (probably 64-bit, unless you have an older computer or tablet). Official windows update download links: Alternatively, if you don't like direct downloads, you can always hit the official windows update site, which always tells you to the latest version, and follow the instructions there. Once you've downloaded the original update 1, you'll have six separate patches that need to be installed in a very specific order. Your computer will need to restart a few times during the process. KB2919442KB2919355KB2932046KB2937592KB2938439KB2934018Windows Desktop Update. Note how Metro apps can now be minimized to the Taskbar.Life after updating Windows 8.1If you are a mouse and keyboard person, you will find that the latest version of Windows 8.1 makes the Metro interface more palatable. Whether this will move you to actually use the new start screen is a different question. Unless there's a Metro-style app you really want to use, you'll probably still end up on the desktop, using a to bring back the Windows 7-style Start menu. On the rare occasions when you find yourself immersed in the new Metro interface, at least the latest version of Windows 8.1 makes the whole experience feel a little less than you are brutally ripped out of one operating system and und ceremony thrown into another. So that's good. On the desktop side of things, the latest update doesn't change much. Recent changes have included better support for high PPI screens, and that audio and video files are now opening in Photo Viewer and Media Player,

respectively, rather than making you bounce into Metro. For Owners of Windows 8.1 tablets, you now get a search button on the home screen, and some Metro stock apps have been updated/improved. Really, however, if you are a power user and have some free time to play around, check out how to install Windows 10 Technical Preview in a virtual machine. Soon, things will go much, much better. Sebastian Anthony wrote the original version of this article. It has since been updated with new information. Apple released iPadOS in late 2019 and has brought a redesigned operating system for owners of almost all Apple tablets (apart from some of the older models). Apple first announced the new operating system - a fork off iOS built to take advantage of the iPad's larger screens - back in June to wwdc 2019, although we were left waiting until September 24, 2019, for it to hit the slates. Now Apple is on iPadOS 13.5 which is ready and waiting to be downloaded to your tablet. Unfortunately, older iPads can't switch to iPadOS - in particular, the original iPad Air, iPad Mini 2 and iPad Mini 3. Check below to make sure you have a run yourself through a (very short) step-by-step process. 1. Roll up your iPad before installing iPadOS 13.5. If you want to download iPadOS, we recommend you get your existing iPad back first, just in case. This way, you can restore your tablet's settings, apps and data if the update goes wrong. To find out how, check out our ultimate guide on how to get your iPad back. 2. Download from Settings. Mercially, we've finished with the arduous beta phase, and getting the iPadOS update is a breeze. You'll need to be connected to WiFi to upgrade. Head to the general software update settings. Press the button to update to iPadOS (at the time of writing its iPadOS 13.5 version) and you'll get the process started. Given that it from the first version of the iPadOS, this may be a thorough process, so expect the full update process to take some time. Your iPad will need to download the full update, prepare the tablet, and then install the update. If you have automatic updates enabled, the update should be installed automatically anyway according to Apple protocol - that is, at night if your device is plugged in. 3. That's all. That's all there should be to get iPadOS today, although the initial phase may mean request the update at the same time. Everything you need to know about iPadOS 14 (Image Credit: Shutterstock) After almost a year and a half of beta testing, Microsoft Windows 10 May 2020 Update is finally available for download. The update, also known as the Windows 10 version 2004, brings a host of remarkable features to Microsoft's desktop OS. These include a brand new File Explorer, enhanced search features, password-free connection support and new Cortana experience, with the digital assistant in transition to become a separate application while offering more conversational interactions. Other additions include a cloud download feature to make resetting Windows 10 to its default configuration a much easier task, as well as changes to virtual desktops, DirectX 12 Ultimate support and more. To download the Windows Update May 10, 2020, you can check if it is available in Windows Update. To do this, head to the Windows update and security settings of Windows to check for updates. If the update is ready for your PC, you'll see an update to the features of Windows 10, version 2004, appear under optional updates. You can then start downloading by clicking Download and install now. Microsoft note, however, as the update is released on a staggered basis, meaning it won't be available to all Windows 10 users at the same time. You can't see [the update] on your device as we're slowly limiting this availability over the next few weeks, or your device might have a compatibility issue for which a backup socket is in place until we're confident you'll have a good update experience, Microsoft says. Although it might not happen on your PC for a few more weeks, you can use the Update Assistant tool to force the installation of windows May 10, 2020 Update. However, given the number of troubled updates Microsoft has released in recent months, there will inevitably be problems for some people, so it might be worth holding for now. Microsoft's next major update for Windows 10, currently known as Windows 10 8:2 p.m., will be released later in the year. However, rumors suggest that the update will be a low-key affair; Just like the November 2019 update, it will probably focus on minor settings and fixes, rather than new features of Windows 10. iOS 6 is out, and you update your iPhone, iPad, or iPod touch right now if you want. Here's a list of supported devices and how to install the upgrade. Note: iOS 6 is being rolled out, so it might not be available to everyone as early as this minute. Be patient and he'll come. Also be aware that everyone is flooding Apple's servers to update, so things could move a little on the slow side. Step One: Make sure your iDevice is compatible. In order to run iOS 6, you'll need one of the following devices: Of course, iOS 6 works on the new iPhone 5 and iPod touch (5th generation) but devices are pre-installed and therefore do not require an upgrade. If you have any of the devices listed above, take the next step to upgrade. Step Two: Live or iTunes Upgrade. There are two ways to update iOS 6: use your iDevice or computer. We're going to take care of both of them. To update your iDevice on the air, follow these steps: connect your iPhone, iPad or iPod touch to power. You don't want the update to stop halfway because you ran out of battery. Save your device! Open the Settings app. Tap the General tab. Tap the Software Update tab. Wait for your device to check for updates. When it finds an update available, install it. Wait for the update to be downloaded and install. Don't do anything with your phone while it does. To update your iDevice with iTunes on your computer, follow these steps: connect your iPhone, iPad or iPod touch to your Mac or Windows PC and open iTunes (if it doesn't open automatically). Back up your device! iTunes can tell you that an update (iOS 6) is available for your device. If so, confirm that you want to install it. If not, click on your device in the iTunes sidebar and press the Check for Updates button. When an update is found, confirm that you want to install it. Wait for the update to be downloaded and, once completed, confirm that you want to install it. Wait for the update to be installed. Whichever method you choose, your device will restart once the update is complete. You'll most likely need to go through a few installation panels to get started, but your device now has iOS 6!
