## Viper keyless entry remote start

Rejected when garage mode is enabled, smartstart compatibility: The Viper SmartStart module can be added to the 4105V version, allowing you to use the default/no remote key system function from your smartphone on the SmartStart app. This app is compatible with iOS devices (requires iOS 9.0 and above) and Android devices (requires Android 4.3 and up). Vehicle lock/unlock features: Each 7146V remote control has a separate lock and unlock button when the lock door locks the horn in the car honks once and the parking light flashes once. When the Unlock button is pressed, the The door unlocked the horn twice and the parking lights flashed. In silent mode, the door locks/unlocks without the Hoon horn and the parking lights flash to confirm the function. In addition, the 4105V also features a ignition-controlled door lock. When the door is activated, it locks three seconds after opening the ignition button and is unlocked when the ignition button is turned off. If your vehicle wants to use a data integration module that controls your factory door lock, no additional parts are needed in addition to the data integration module. May require an auxiliary relay, and if the release of the plant is not activated, the power will usually be able to increase the trunk release solenoid (part directed #522T) car search: If you have trouble finding your car in a crowded parking lot, the car finder function will cause the flashing light to slow 5times, allowing you to search your vehicle. Panic mode: If you are threatened in or near your vehicle, you can draw attention by running the system with your remote. Panic mode requires a horn-horn circuit to connect. Connect
