## The new paradigm book pdf

The new paradigm begins with the magnation of science and what it has done for us. Then, in Chapter 2, the consequences of our short-sighted acceptance of the contasis of today are shown to make it unlikely that the West will be able to survive this century. Running out of resources and overcrowding are the main reasons. Chapters 4 and 5 show that our present beliefs in the foundations of science are ill-thought; most of these safe foundations are now shaking off doubts. This is followed by the essence of the book. Chapters 5, 6, 7 and 8 present evidence of acceptance of reality Telepathy and recognition; ghosts of men; the ability of some to leave the body while still alive; experiences when very close to death, which do not seem to be overshadowed by the religion of the experienter. They include experiences of intense feelings of love, assessments of your life, etc. the most recent start to such experiences involves observing a patient on a death bed - usually in a hospital operating room - of your own body from a height up near the ceiling. This is followed by evidence of reincarnation in the new organs. Chapter 9 has a detailed discussion of what CONSCIOUSNESS means. In this section comes a statement of evidence for Biofield to explain the ability of some to show that they can change their surroundings by the power of their minds. The last chapter provides some conclusions and outlines the approach to the New Paradigm. People exist dualistically, the essence of man is inside his mortal body. This essence is called Consciousness (or Soul) and it lives, although we do not yet know how many generations; and whether this reincarnation applies to all of us. Adopting this vital change of outlook as it extends to the general population will cause many changes, including reducing hatred and war and increasing peace and love. To challenge the existing scientific paradigm, data incomprehensible to current theories needs to be shown. But equally importantly, you need to turn to the assumption that underlies the current theories and limitations they impose on these theories. The author does both! Models are ways to explain reality, however, all models are incomplete. Too often, the model is treated like dogma. Few scientists emphasize weakness in this model. The author takes the models that underlie modern beliefs --- quantum theory, relativity, cosmology, evolution and origin of life, and points to their weakness and presents alternative explanations. The book begins with a beautiful summary of the evolution of the paradigm over the past 3,000 years and how our current scientific paradigm came out of this past. Then the author dissipation the basic structure of support for today's science. Many people believe that there is confidence in and science; the author notes that this is not the case and that we must live with uncertainty. The pillars of the current scientific paradigm are mathematics, the theory of relativity and quantum theory. Nevertheless, Dr. Bockris continues to illustrate how modern science is a structure built on a foundation of sand. He points out that mathematics is not the basis of physics that we tend to believe in. The author tries to illustrate the limitations of two other pillars of modern physics - relativity and quantum theory and calls into question the underlying assumptions in these theories. Many of the issues raised require a lot of thought and research for the reader to appreciate. The author notes that a completely incorrect theory could give excellent consent to the experiment, for example, the Ptolema model had an impact for 1,400 years because it worked so well. Dr Bokris believes Darwin's theory of species evolution through natural selection had a greater effect in shaping the 20th-century paradigm than quantum theory or relativity. The author challenges the postulate of random changes and believes that the presence of too many different forms of life on this planet cannot be explained by randomly targeted biology theories. The author would like Lamarca's long suppressed views to be reconsidered. Lamarque believed that evolution could occur because of the inheritance of acquired characteristics. To explain the beginning of life on this planet, it is necessary to explain the existence of DNA - since the shape of each species on earth is determined by the information contained in the structure of their DNA. The main paradigm of science depends on the occasional collision between simpler components. Dr. Bokris argues that the creation of a very long and complex organic molecule (with two intertwined strands) and the presence of a series of amino acids in it, each in a series of body-specific groups, is unlikely to happen as a chance of that to happen. He goes on to illustrate that the likelihood of this happening is a random choice equivalent to zero. So he concludes that there was no credible answer to how the first DNA began - and life. In addition to the teleological explanation, he suggests seriously considering the possibility of genetic material aboard meteorites and the possibility of alien landings on the ground. Dr. Bockris goes on to point out that there are many phenomena with undoubted supportive facts that we have yet to adequately explain, and which seem to be incompatible with modern science. There is no physical model that can tell us why gravity and repulsion occur yet it is the basis of so much in physics and chemistry. We do not understand the effect of placebo, Kyrian electrophotography, homeopathy, targeted insect behavior, QiGong masters data and experts, data on alternative medical techniques, many of which have been unfairly suppressed. Dr. Bockris then devotes four sections to paranormal phenomena identified as phenomena that seem to exist, independent of those observed through five senses. It is his belief that recognizing these phenomena will make the present paradigm obsolete. He goes on to discuss extensive research and data on additional sensory perception, psychokinesis, phenomena, ghosts, poltergeist, possession, from body experience, near the experience of death, survival after death, abnormal healing and other miracles. The author believes that consciousness cannot be created in the brain because individuals appear to be able to remain conscious when the organs of their bodies (including the brain) do not work. A more experimental consistent model of consciousness would be to view it as a Primary existence. This Dr. Bokris considers a key element of the New Paradigm. Dr. Bokris no doubt describes what happens to the scientist when he/she challenges the status quo by omping anomalous facts inconsistent with the existing paradigm. He argues that scientists who engend new ideas threatening the paradigm are rejected by their institutions and ostracized by their counterparts. He goes on to describe his own experiences as a distinguished professor at Texas A&M; M, as for his work on both splitting water fotheoelectrochemically and on cold ingot. He then gives another example and discusses what happened to Professor Dean Radin at the University of Nevada after he published a compelling book about mental phenomena. The author is not shy about risking his personal recommendation of what needs to be done to achieve a sustainable world. Many of these futuristic projections can be considered highly controversial - such as questions about freedom of speech, restraint of capitalism, population control, approaches to education and renewable energy options, including a new opportunity - a zero point of energy. While one may or may disagree with Dr. Bockris, all topics that society should seriously consider. The book reflects the deep thinking and power of the author as a synthesizer. It solves the issue of rigid science, philosophy, religion, paranormal phenomena and social issues. The style of the book ranges from a plain text book, to thought comments, to people's experiences. The breadth and variety of topics discussed almost requires it. Thus, it is necessary to be open to the transition from a chapter with a mathematical discussion of the time profile in the theory of relativity to a chapter that will contain a description of Dr. Bockris's personal experience in a haunted house. Sometimes references to allegations challenging the key beliefs of the current scientific paradigm, Sources. As such, the reader should assess whether there is a case they make weak, or whether such claimants simply fail to go through the peer review process of those who support the current paradigm. This book has more than five hundred pages and will benefit from sharpening and tightening. The book also needs more thorough proof of reading, especially with regard to references. It has detailed content, but no page numbers. The index, however, is not as large or well made for a book of this width and length of the page. Hopefully these minor but annoying restrictions will be eliminated in the next edition. Especially as I believe this becomes an excellent text for an interdisciplinary study of the foundations of our belief system and worldview. Thus, the new paradigm that Dr. Bockris hypothesizes will lead to a rethinking of much in modern science. The focus of this book is on the elements involved in challenging the existing scientific paradigm of the West, the need for such a challenge and the beneficial impact of the new paradigm on the future of civilization. Whether the author is correct or wrong in statements supporting his challenges is not a key question. We got a habit of no longer questioning the basic foundations and assumptions of theories that buttress science. Dr. Bockris provided us with a roadmap of available data that challenges the current scientific paradigm. He wants us to ask tough questions and then ponder the answers that are emerging. It is his belief that this process will lead to a new paradigm more suitable for the survival of our species. Species.
