Respiration and excretion worksheet answers

The air passes through the nose, pharynx, airflow and bronchi in the lungs. Oxygen can be absorbed by the respiratory system and glucose from the digestive tract. Both oxygen and glucose are transported around the body to the circulatory system. With every breath we take, we take oxygen out of the atmosphere. The atmosphere consists of 78% nitrogen, 21% oxygen and 1% other gas, so not all of the air inhaled enters the body. I'm going to keep reading... You can create printable tests and worksheets from these breathing, digestion, and selection issues! Select one or more questions by checking the check boxes above each question. Then click the add selected questions to the test button before going to another page. Previous page 1 72 Next previous page 1 72 Next Air travels through the nose, pharynx, trachea, and bronchi in the lungs. Oxygen can be absorbed by the respiratory system and glucose from the digestive tract. Both oxygen and glucose are transported around the body to the circulatory system.
