Who presides over the business of a committee

The process for removing a vice president of a small company depends on whether he is a board member or just an executive of the company. Many small companies have overlapping directors and executives, where board members are also employees of the company. A director shall be removed by a vote of the rest of the Board of Directors. High-level employees may be removed or dismissed at the discretion of the chairman or ceo, provided that they have the power from the board to hire and dismiss senior executives. Refer to the company's written regulations. Each company is required to have a set of regulations that structure governance; However, some small companies operate without them. The regulations should detail how to remove board members, replace board officers and fire officials. The provisions of the Regulation take precedence over any other procedure for the removal of a Vice-President. Vote to remove the Vice President. A board of directors has its own executives. For example, a board of directors will always have a president or president, a secretary and a treasurer. It may also have a number of vice-presidents or vice-presidents, as justified. The majority of the Management Board for removal is sufficient if the Vice-Chairman is an employee of the Management Board and his removal is from the Office and not from the Management Board. The vote is also sufficient for the complete removal of a board member from the Board of Directors, provided that any other procedures described in the regulations, such as the provision of notice, are followed. Ask the company president or CEO to request a meeting with the vice president. If the vice president is an executive of the company and not also a member of the board of directors, the power to fire him would normally be with the CEO. Occasionally, some boards require senior executives to obtain approval from the board to fire senior executives. In any case, set up a meeting between the Vice-President and the person or persons empowered to remove him from his post. Inform the vice president of the decision to remove him from the post. Edit whether it is a dismissal or repositioning in a different location within the organization. If the Vice-President has an employment contract, the separation from the company must follow the procedures set out in that document. Agree to a settlement or withdrawal. Small businesses should offer a senior executive a severance package in exchange for him signing a separation agreement that will prohibit him from competing against, sue or otherwise try to harm the company. Amrapali Soni, House of Spices Co-President, joined Yahoo Finance Live to discuss how businesses have been affected by COVID-19 and its prospects in 2021.Video Transcript [MUSIC PLAYING]ADAM SHAPIRO: For many people there is nothing better than good spicy food. And with the Diwali holiday tomorrow, we decided to call call amrapali soni who is Co-Chairman of the House of Spices. And to let you know, it's the oldest South Asian food company in the United States. And you're known mostly, though, by one of your product brands, which is? AMRAPALI SONI: BRAND LAXMI. I'm glad you're here. So, you know, I'm sorry. I'm thinking about my youth. We eat food today that we never ate when I was a kid just 40 years ago, 30 years ago. So, yes, no, 40 years ago, I'm so old. So what was the transformation? Because today everything has all kinds of spices more than salt and pepper. Can you hear me? Amrapali SONI: Yes, I can hear you. So, what led to this transformation of all of us using, you know, new spices? AMAPALINI SION: That's a big question. So, first of all, the population of South Asians has increased 81% in the last 10 years. So we have a lot more buyers out there, but the use of social media and digital platforms has made food universal. It allows people to look for new things, try new things, get recipes from different places. Things like Bullet coffee, people put mistletoe in their coffee. Turmeric is a very healthy Ayurvedic seasoning that the mass population now uses. So with new key trends and health benefits, many of the Indian spices are getting into mainstream stores. SEANA SMITH: You said in an aggressive business expansion, you have new branding marketing distribution efforts underway. How has COVID-19 affected any of these initiatives? AMRAPALI SONI: COVID-19 really helped us. So it prompted us to work faster. So we've really moved from removing a religious symbol on our logo to going to a more universally accepted agnostic symbol while retaining the same elements. COVID-19 allowed us to look back and provide operational continuity. So we doubled, we took inventory from Asia knowing that this pandemic would be bigger than it was. We paid a year and a half to all our employees. And we took this time as an opportunity to invest in infrastructure, to invest in trucks to meet the demands of our customers. Because as you know, the necessary food, there was a big uptick, and there was a lot of accumulation going on in grocery stores. ADAM SHAPIRO: Do you think it's now in the mirror, or is the supply chain at risk from new contamination rates? AMAPALI SION: So we did an internal investigation today. So what we find is, the new rule is here, and people are used to it. What we are seeing is that there is no sense of urgency as during the first wave, when it was really unnatural for everyone. So we think that the uptick in turmeric, and ghee, and many of the spices that have these health properties, there is a big uptick. But in terms of double falling and accumulating in people's homes, we think it's a sign of the past. SONA SMITH: How an uptick you've seen in your sales? Are there numbers you can share? AMRAPAL SONI: Yes. So we're dealing with an increase we're looking for between 25% and 50% in our business. Can I buy these spices - can I go to a grocery store to get it? Can I get it online? Where can I find the product? AMRAPALI SONI: This is part of our expansion plan. So right now, you're looking at the size of the national market is about \$45 billion. It is expected to increase by 10% in 2020. Then on top of that we're collaborating - with trends showing that South Asians aren't just shopping in ethnic markets, they're shopping in big box retailers, they're shopping at grocery chains, so it allows us to work with companies like Costco or Wegmans. So you will be able to find our South Asian food in those stores as well. SEANA SMITH: This is a lot of exciting things you're fixing, especially when you take into account some of the challenges facing other brands right now in the midst of this COVID-19 pandemic. You didn't have to fire any employees, wait for sales to jump you said 25% to 50%. What does that only mean for your workforce? Are you hiring now? What's the percentage of hires do you think we'll move on? AMPAPALI SONY: Yes. House of Spices employs 190 people across the country. We've hired 10% of our workforce in the last six months, and these are middle management in senior management, so we're very excited. In terms of expansion, too, you know, we not only serve the U.S., but we serve the Canadian market. And there are other markets that have South Asians, so we're looking at this at a global level, not just North America. ADAM SHAPIRO: Just too fast, for those of us who love the food we buy but may want to try cooking it, is there a cookbook? Do you have a cookbook that we could get to - how to use the various spices that are now at our disposal? AMRAPALI SONI: So personally we don't have a cookbook, but there is a cookbook that I can recommend. It's Indian. So it allows Western culture to get South Asian food and learn techniques how to make traditional Indian cooking at home in an easy way. Ok. I don't know if I'm ready for lox curries and bagels yet, but I like lamb curry. Thank you so much for coming. AMRAFAL SONI: Thank you for having me. Adam Shapiro: All the best for you and the team. With an interest rate of 8.6% on its savings accounts, fintech encryption platform BlockFi offers an interesting option for disappointed with low interest rates. I recently suggested that if you could just invest in a clean energy stock - FuelCell Energy (NASDAQ: FKEL) or Plug Power (NASDAQ: PLUG) - I'd go with plug over fcel stock. Source: Kaka Skokanova/Shutterstock This was before I even realized that Plug Power had snagged a \$1.5 billion investment from SK SK one of South Korea's largest conglomerates. A week after the plug power announcement, which saw PLUG jump 33% in the news, I don't think there's any doubt it's the best buy. InvestorPlace - Stock Market News, Stock Advice & Trading Tips That said, FCEL stock has benefited from Plug Power's good fortune. That's up 43% since the January 6 announcement. 7 Dividend Shares That Increase Their Payments if you're thinking of energizing FuelCell's momentum, you might want to consider what Plug Power's financial windfall means for both companies before you start FKEL fashion. FKEL's stock has increased by 591% Since mid-November In two months, the owners of FBEL shares have the equivalent annual return of 3,500%. I don't think there's any way to coat sugar this, other than to say that buyers of its stock have done incredibly well for such a short investment period. While you'll have to pay regular income-tax rates on your short-term capital gains if you were to sell at this point, you'll still make out like a bandit. There's no shame in taking profits. You may also want to consider that Jefferies analyst Laurence Alexander launched the provider's coverage of fuel cell solutions on January 7 with a holding rating and an \$11 target price. The 'stars aligned for FuelCell energy' in 2020, given the favourable policy changes in favour of renewable energy and hydrogen production, progress in the company's growth axis and ESG capital flows, Alexander tells investors, the Fly.com said. However, now strong secular trends, a 'tighter functional culture' and a 'war chest' for long-term growth appear largely discounted to the share price, argues Alexander Matt McCall of InvestorPlace recently discussed the so-called war chest that Alexander wrote about in his FuelCell stock estimate. In December, FuelCell sold 25 million shares at just \$6.50 per share, raising \$162.50 million in the process. More important than the company's willingness to sell shares at \$6.50, a 36% discount to its november 30 share price, is the fact that Orion Energy Partners, who held 5.9% of FKEL shares before the offer, were willing to sell less than 84% of their position at the reduced price. While it is not unheard of for a company like Orion, which lends and makes investments in the energy industry, to want to leave its position, to do so with such a discount should make you scratch your head a little. Even more so now that FCEL is trading above \$18 as I write more than 15% a day. I wouldn't be surprised if we had a depletion gap in the second half of January. Plug Power has stronger support if Plug Power didn't have a better list of shareholders than FuelCell Energy before its announcement that SK Group was taking a 9.9% stake in the company, it certainly does now. SK Group had revenue in 2019 of \$119 to \$119 making it the 73rd largest company in the Fortune Global 500. In 2019, Plug Power had revenue of \$230 million. Of SK Group's total revenues, its energy and chemicals account for almost half of the total conglomerate. The company is in the process of moving away from dependence on fossil fuels. Mr . Chey ordered a sweeping revaluation of SK's portfolio to be completed within the next three years. This will include carving out coal-intensive businesses and doubling the company's multibillion-dollar bets on EVs, computer chips, biotechnology and renewable energy, the Financial Times reported in November 2020. The era of competition on the scale is now behind us. . . . We want to be the best company in the ESG sphere. Jang Dong-hyun, president of SK Holdings, which helps oversee SK's 125 subsidiaries, told the Financial Times in an interview. This was before the Plug Power investment that will also see the two companies form a strategic joint venture partnership for hydrogen fuel cell systems and hydrogen fuel stations in the Asian market. As I mentioned in my last article on Plug Power, it plans to hit \$1 billion in revenue by 2024. With \$2.1 billion in arrears and SK Group in tow, I see the chances of success getting higher by the day. It doesn't even consider that Plug Power could soon be Amazon (NASDAQ: AMZN) and Walmart (NYSE: WMT) as shareholders rather than just customers. By comparison, FuelCell's largest shareholders are CVI Holdings with 5.9%, BlackRock (NYSE:BLK) at 4.4%, and Lawrence I. Rosen at 3.7%. I don't know about you, but I'd rather have Plug Power's trio of shareholders supporting its share price than what FBEL brings to the table. Bottom line The latest agreement with SK Group is proof that CEO Andy Marsh's plans to develop plug power are working. While both stocks are extremely expensive, PLUG is the growth stock you should choose from. At the date of publication, Will Ashworth did not have (directly or indirectly) positions in the securities referred to in this Article. Will Ashworth has been writing about full-time investments since 2008. Publications where he has appeared include InvestorPlace, The Motley Fool Canada, Investopedia, Kiplinger, and several others in both the U.S. and Canada. He particularly enjoys creating portfolio models that stand the test of time. He lives in Halifax, Nova Scotia. At the time of that drafting, Will Ashworth did not hold a position in any of the abovementioned securities. The post FuelCell Energyâ€™s Got a \$1.5 billion problem first appeared on InvestorPlace.Mum reveals how she earns £1000 every day working from home after her online deal They're valued at £10 million! At a time when millions of people are strapped for money and count on their income tax refund or a stimulus check, they will have to wait a little longer before they can file their taxes. February 12 marks the first date on which the Internal Revenue Service will begin accepting and processing returns. Tax period began January 27 last year. Watching the markets with an eye on the main opportunity, Raymond James strategist Tavis McCourt sees both risk and opportunity in current market conditions. The opportunity, in his view, stems from the obvious factors: Democrats won both Georgia Senate seats in the recent runoff vote, giving the Biden administration's incoming majority support to both Houses of Congress - and increasing the chances of substantial budget support being signed into law in the near future. Most importantly, the coronavirus vaccination program is progressing, and reports suggest that Pfizer's vaccine, one of two approved in the U.S., is effective against the new strain of the virus. A successful vaccination program would accelerate economic recovery, allowing states to relax lockdown regulations - and get people back to work. The risks also come from the political sector and public health. House Republicans have passed articles of impeachment against President Trump, despite the impending physical shutdown of his term, and this quote reduces the chances of political reconciliation in a heavily polarized environment. And while the COVID strain is combined with today's vaccines, there is still a risk that a new strain will develop that is not covered by existing vaccinations - which could restart the cycle of locksmiths and economic decline. Another risk mccourt sees, beyond these two, would be a sharp rise in inflation. He doesn't discount that, but he thinks it's unlikely to happen anytime soon. ... product/service inflation is only really a possibility after re-openings, so the market feels a little bulletproof in the very near future, and so the ongoing rally, with Dems winning the GA races simply adding fuel to the stimulus fire, McCourt noted. Some of McCourt's colleagues among executive analyst Raymond James keep these risks in mind, and putting their imprimatur into strong dividend shares. We searched Raymond James' recent calls, and using the TipRanks database, we selected two shares with high-yield dividends. These buy-rated tickers bring a yield of 7%, a strong attraction for investors interested in using the current good times to create a defensive firewall should the risks materialize. Enterprise Products Partners (EPD) We will start in the energy sector, a
