American-made contractor-grade snow removal tool. It is trusted by hundreds of snow removal contractors to get the job done and thousands of homeowners to protect their biggest investments. A complete list of retailers can be found here. Safely remove heavy snow from the roof at a deep depth! Every year, people are killed or seriously injured while removing snow and ice from rooftops and other buildings. In addition, the steeper the pitch of the roof, the faster the snow will fall, and if you are not careful, a standard roof snow rake will dump that snow on you. Roof razor® is a tool to safely remove snow from roofs and protect investments. Water safer for your roof than a snow rake backed up behind an ice dam can leak, causing damage to walls, ceilings and insulation. Snow cover can damage or collapse your roof. Catching the edge of a roof rake on a part of flashing or loose shingles can also cause damage. The roof razor® snow removal system safely prevents ice dams and snow cover. High-tech polywheels eliminate the old-fashioned harmful lift chop pull motion of regular roof gles that crack and split brittle shingles, while polyshot slides are snowing from users. No ladder is easier on your body than a roof rake! Plant your feet tightly on the ground, push your razor head up into the snow and watch the snow fall under your own weight and slide off the roof. Simple and efficient use for anyone Fom teens, roof Razor® snow cleaning/snow removal system is easily operated and designed for long-term durability. See how well it went in Bayfield Colorado with 2-5 feet of snow on the roof of a 3,100-square-foot home. Yes. Roof ® Lake easily removes 2- and 3-foot-deep snow. Roof razor® is the fastest option on the market and take less work. Lightweight with a 24 wide head with dual cut action. Roof razor® is the fastest way to get rid of snow, including deep snow. We also have a drift cutter kit option that speeds up the process further due to deep snow. But don't take our word for it. Read this testimony. When using roof ® roof raki, the distance from the lowest edge of the roof to the ground should not be more than 16-24 feet. Roof razors can easily handle 5-6 poles. Some have extended beyond this. Yes, add a metal roof kit to your order. It is very important not to use wheels or skeets, the same as used in other roof rakes. If you don't use wheels, the chances of scratching your metal roof paint are very high. Yes, roll over the electrical ® the wheel of the roof razor and leave it intact. This is unlike any other in the market that might skid across them and tear them apart. Yes that's right. To further improve the shallow or low pitch roof, we have also developed an angle kit. When used properly, the slide should last for several years. No, we don't produce Titan raki, but we do support accessories and parts. Yes, as you can see in the video here. Yes that's right. Click here for the angle kit. Here you can see titan roof razors get rid of about a2 of wet snow. Note the bending of the poles, the strength of the roof razor and the ease with which the snow is removed. The horizontal head frame functions as a cutting bar. Get rid of snow, push, stop, small reverse strokes and let gravity work easily. Standard roof rake removes snow by tying the roof. As you can see, shingles on the roof can be damaged. MinnSNOWta™ roof razor ® uses wheels that roll into shingles to prevent damage to your roof. Because of its light weight and design, you can use a roof razor as long as you can reach the roof®. Here, the inventor's daughter easily removes heavy, wet snow on windy days. Note that at some point, she uses ® to push the roof razor and the roof over the roof. Finally, when you're done using it, you can lower the roof razor to ® easy to see. Learn more™ to use MinnSNOWta ® Lou Fraser. Place the Lou Fraser ® using a simple sideways movement and press easily to watch the snow fall This is our dynamo model, removing about 6 deep wet heavy snow. Deep.
