Adam MIDI Connection Saturday, March 2, 2019 Subscribe by email I just bought Oxygen 25 (3rd Gen) at a secondhand store. Is there anything I need to download on the M-audio n install site on my Mac? Or just plug n play? I will use it with Pro Tools 12.4 if it matters. thank you Thank You Delayed Response Moderation Because you can find out yourself by doing a simple check on the M-Audio homepage: Oxygen 25 is class-appropriate and does not require additional drivers for the selected operating system. The only thing you need to download is DirectLink mappings if you use Logic Pro X (or GarageBand) as a DAW, and want to map buttons and buttons automatically. Most other DAWs have DirectLink with the latest version. Check this page for details: Search M-Audio Driver Select Legacy and Oxygen 25(Blue) which is the gen.3 version. more than a month ago Connection #2 No reply has been made for this post yet.
