Fresno state graduation 2019

Getting Alot Education > Schools & Programs to get students to finish high school is no easy task, especially today. It takes a lot of work from all parents to parents to elected officials. Some states are doing a great job by putting a lot of money and effort into their education programs. Other? Well, not so much. It's not that they're not trying - they're just not trying hard enough. We decided to dig something and figure out which state is the best of the best (and the worst of the worst). We were surprised at the worst condition (if you could call it that), but we were particularly shocked by the best! If the goal is to get kids to go over stage and take this piece of paper, some should definitely train a little better. Statistics from the 2018 Joint Data Core from the National Center of Data and the Department of Education of each state. We know that the District of Columbia is not technically a state, but we had to increase its aschool rate. According to the National Center of Data's Joint Data Center, D.C has a graduation rate of 68.5%. That is 20% less than the national average. That's a pretty shocking number, especially for a place the capital of the United States. You could say it's because there aren't many schools in the district. However, if you include private and public schools, there are a number of options. Fun fact: Al Gore called District of Columbia at home! (Image via Pinterest) As far as the continental states are concerned, the state with the lowest graduation rate is New Mexico. This is certainly not great, considering that the United States has a high school graduation rate of 88% (also known as a number that is not too difficult to achieve). While we want to say that things are getting better, the statistics of New Mexico seem to be turbulent. In recent years, the state has managed to increase its graduation rate from 2010-2011, when it was only 63%. However, the trend seems to be inconsistent. The rate jumps between 63% and 73.9%, the latter being the most recent graduation statistic. Maybe they have finally broken the bad track and will see an upward pattern. Fun fact: Neil Patrick Harris is from New Mexico! (Image via Pinterest) Alaska has a few problems, but one of its biggest is its high school graduation rate. The most recent statistics show that 78.5% of pupils attending grammar school actually take a high school diploma. Well, we have to say that the state is getting better. In the 2010-2011 school year, only 68% of students graduated from high schools in Alaska. Now that figure has improved by 10%. In fact, it is always from year to year, so everything they do works. Fun fact: Sarah Palin is from Alaska! (Image via Pinterest) Arizona's stats aren't great, and they could definitely improve. Around 78.7% of pupils attending grammar school this is about 10% lower than the national average. Like many of the lower lists, Arizona has difficulty keeping kids in class. In the 2010-2011 school year, the statistics were very similar – 78% of the students graduating. Unfortunately, that number fell to 80% by 2016. What is going on? They were on an upward path, and now they are falling again! Fun fact: Emma Stone is from Arizona! (Image via Pinterest) So, Oregon should be super smart, isn't it? That's something they're tightening up. It turns out they don't have great stats. At present, the Baccalaureate rate is 78.8%, but could be even worse. In recent years, things have actually been much worse. For three years in a row (from 2010 to 2013), the state was unable to break even 70 percent. Only recently has the state changed something that has encouraged children to stay in school. Gotta say that a 10% jump is pretty good though. Fun fact: Ty Murrell called Oregon home! (Image via Pinterest) Believe it or not, Michigan has remained fairly stable over the years. The lowest figure was 74% in 2010-2011, but that was a while ago. By 2015, the Baccalaureate rate had reached 80%, and it has been hanging there ever since. Data from Michigan's own education department shows that graduation rates have improved significantly from 2019. You rate the rate at 81.41%. It can't be much longer that they're in the bottom 10! Fun fact: Believe it or not, Eminem is from Michigan! (Image via Pinterest) Idaho is really weird. The National Center for Education Statistics didn't have data for Idaho until the 2013-2014 school year. There are only two other states that have had this phenomenon (Oklahoma and Kentucky). We had to dig something, and we found a memo from the Idaho Department of Education that said Idaho's High School graduation rate is (allegedly) rising. In 2018, 80.7% of pupils completed their A-levels. In the previous year it was 79.97 %, compared with 79.66 % in the previous year. Well, they are technically right. Graduation rates are improving, even if they are only 0.01%. At least 2018 is higher. Fun fact: Aaron Paul is from Idaho! (Image via Pinterest) For some reason, Colorado is another one that we expected to get better. Not that 80.8% is awful (at least they're not as low as D.C), but they have some pretty great schools. If you look at the statistics from the Colorado Department of Education, it looks a little better, even though most children take more than four years to go to high school. The state lists a six-year graduation rate for class from 2017 to 85.7%; we say again: six years. That's closer to the national average, but six years is pretty much. For 2019, the four-year graduation rates, so Texas has made it to 90%. But that's still pretty good. Fun fact: Amy Adams is from Colorado! (Image via Pinterest) South Carolina has a lot to do, but we are Impressed. In 2011, the graduation rate was a meagre 74% – not even close to the national average at the time. Somehow, they've upset it up to 81% for the 2018 final year. Good job, South Carolina! Fun fact: Andie MacDowell is from South Carolina! Now to the bad news. In the final year 2016, the rate was 83%. It could certainly be a fluke, so we won't judge. The number of dropouts has fallen over the last two years, so the number could rise again. (Image via Pinterest) Louisiana is another state that has dramatically improved its education system. For the 2018 graduation year, they managed to complete 81.4% of their students. Yes, that's lower than the national average, but look at previous years. Not to throw numbers at you, but in 2011 was 71%, 2012 was 72%, 2013 was 74%, 2014 was 75%, 2015 was 78% and 2016 was 79%. Do you see a trend? We do! Every year the state gets better and better, so soon they will not be on the list at all. Fun fact: Harry Connick Jr. called Louisiana home! (Image via Pinterest) First of all, we congratulated Georgia on its position to achieve a completion rate of 81.6%. It's lower than 88% (that's the national average), but we're looking at the past few years, and wow! In the 2010-2011 school year, their graduation rate was alarmingly low at 67%. This is so awful that it was literally the worst graduation rate of the year (excluding D.C.). With hard work and determination, they managed to raise their rates to 81.6%. The good numbers continue to roll, as Georgia's Education Ministry reported that the rate is 82% for 2019. That's an all-time high! Fun fact: Jeff Foxworthy came from Georgia! (Image via Pinterest) Missouri is a strange one. Their final ranking is currently 89.2%, which is certainly higher than the national average. In fact, Missouri is consistently above the national average by at least a few points a year. But there is something lurking beneath it. Missouri shouldn't be patting itself on the back yet. NPR found that the state does not require students to take Algebra II to graduate. In addition, it does not have a college and career-enabled diploma. We can't help but wonder what the statistics would be if they got students to take Algebra II. Fun fact: Brad Pitt is from Missouri! (Image via Pinterest) Arkansas has done a pretty good job of staying over the curve in terms of aging rates. They have been above the national rate since 2010, and this trend is not going anywhere. The state attaches great importance to school. Over the past four years, Arkansas has grown between 89% and 87%, up from 89.2% this year. While State puts education first, it can soon come in the top five. However, it wouldn't be hard for them to slip into the top 10. Fun fact: Bill Bill is from Arkansas! (Image via Pinterest) Wisconsin has been actively trying to improve its A-level rates, and it's starting to pay off. Over the last five years, there has been an increase of 1.6%. Now it's up to 89.7%. That's quite remarkable! The Associated Press also noted that there were improvements in small groups of students. One of the biggest gains is that English-speaking learners have seen a 4.5% increase over the past five years compared to the previous year and a total of 12.4%. Fun fact: Chris Noth called Wisconsin home! (Image via Pinterest) Tennessee's Board of Education was proud to admit last year that the graduation rate for the 2018-2019 school year is 89.7%. That is half a percentage point more than last year and the highest graduation rate recorded for the state! In total, there are 183 additional students who have completed the grammar school. Tennessee achieved this by actually having a number of schools with a 100% graduation rate, including Huntingdon, South Carroll, Bradford, and Oneida school districts. In the last five years, Tennessee has never fallen below a high school graduation rate of 86%. Fun fact: Reese Witherspoon came from Tennessee! (Image via Pinterest) Initially, Alabama struggled to reach the national graduation rate, and was on average 5% lower. However, the graduation rate rose much faster than the statistics for the United States as a whole. The state proudly passed the nation in the 2013 school year, and it hasn't let go of that record. Now, Alabama's graduation rate is a whopping 90%. The Alabama State Board of Education had a goal of reaching 90% by 2020, but they managed to surpass that by two years. Alabama also measures strict college and career readiness, unlike some other states. Fun fact: Courtney Cox is from Alabama! (Image via Pinterest) Over time, Texas students have begun to graduate in higher numbers. In autumn 2016, the graduation rate was 89.1%, which is quite good (and certainly above the national average). If you skip by autumn 2019, this number will increase up to 92.3%! That's super high! Since this percentage includes all four-, five-, six- and seven-year extended rates, the national record is slightly lower. This report only takes into account the four-year graduation rates, so Texas has made it to 90%. But that's still pretty good. Fun fact: Matthew McConaughey is from Texas! (Image via Pinterest) Over the past two years, West Virginia has managed to keep the graduation rate at 90% and reach 90.2% in the 2018 school year. This is also an upswing compared to the previous year, which according to the Ministry of Education of West only 89.40 %. According to the WV Board of Education, West Virginia is one of the rare exceptions for which the five-year graduation rate (90.7%) is lower than the four-year rate (91.4%). As a Figures further, we would not be surprised if the state broke its 90% series and entered into 91% (or higher). Fun fact: Jennifer Garner called West Virginia home! (Image via Pinterest) The Atlantic City press was pleased to report in 2017 that the number of graduates has continued to increase over the course of the year for six years in a row. We are pleased to say that the trend continues to the point where they had a closing rate of 90.9% in 2019. If you include five-year graduates, it's even higher! They have a graduation rate of 92.5%, according to the New Jersey Board of Education. Many districts even reached a 100 percent rate when they included five-year students. Fun fact: Tom Cruise is from New Jersey! (Image via Facebook) Kentucky is another state that hasn't each year reported its alevel rates to the Common Core Data project. It began in 2012, when the rate was 86%, higher than the national average at the time. In fact, they have been above the national average since the beginning of reporting. Today, this graduation rate is 91.3%. There are certainly some schools that need a lot of work and pull the score down, but the state has done a great job of educating students. Some claim that students are doing more, while others believe it is a change of leadership. Fun fact: George Clooney came from Kentucky! (Image via Pinterest) Iowa is the best state in the nation, as far as A-level statistics go. Students in the state have proven to be some of the smartest, as their rates have exceeded each year over the past six decades. It's certainly not the first time Iowa has been the top dog. They got 91.4% of students to finish high school. The Iowa Department of Education has also reported data for the 2019 school year, and the rate is rising! For four-year graduates, the rate is now 91.6 percent. If you look at five-year graduates, it is 93.5%. Iowa collects some smart cookies. Fun fact: Ashton Kutcher is from Iowa! (Image via Pinterest) Author Alot Education Team Last updated: August 28, 2020 2020
