How to use zenith solid state record player

Ahh thank you all for your answers. I guess I didn't take a good enough look the last time I opened my back. So the Y model means it's '67? Awesome. My car is from '67, i also have another question that can someone answer for me. Referring to the 2nd picture wink timber, what is the little black piece that comes off the back wall of the cabinet? I looked at mine several times and scratched my head every time. I'm obviously no record player guru. Page 2These will become your new favorite test leads, period! Hand made ultra high quality test drive made by candy pieces in Chicago. After saying the title. Our hand-crimped, hand-glued, hand-assembled, hand-assembled test drives FAR exceed scan scans of any generic lead test you've ever purchased for your lab. Stop buying the same bad quality drive test for the bank time and time again. We know that so far you've dealt with the ubiquitous generic. they tend to have boots that slip at any time try to open them, are never glued properly if they are even glued at all, provide high strength, and generally do not seem to last very long. You shouldn't guess your equipment. At Candy Parts we dealt with this exact frustration several times in our work and we decided to provide the best quality lead test we could put together for you. After we put these leads on our bench, they became the ones we get for every time. Our test leads: They are 100% handmade, from wire stripping to crimping to soldering. Quality every step of the way. Use authentic Mueller hardware, they make the best hook and alligator clip ends on the market. Stamped in thick steel plated with nickles. Stay super sharp and super strong. Use a thick but super flexible 16AWG lead cable that easily manages the rated current. There are no more high-strength runways. Have leads that do not burn easily from accidental touching of the soldering iron or accidental surges of current. Never slip when trying to open the cleat. A huge frustration with the generic driving test is available everywhere else. It'll last forever. Our test leads are available in various versions, including: PC-282 with a 2-inch alligator size clip and 32 inch lead 16AWGPC-2172 with a 2-inch alligator clip size and 67 inch lead 16AWGRated to 10 amps. Nickel-plated steel. (67-inch version shown below) PC-182 with a 1.25 inch alligator clip and 32 inch lead 16AWGPC-1172 with a 1.25 inch alligator clip and 67 inch lead 16AWGRated to 5 amps. Nickel-plated steel. PC-45 with a 2.3 inches. Nylon case filled with glass. Custom lead length. Just black and red. Made to order. 16AWGPC-139 with 2.3 inch clip hook and 32 inch lead 20AWG PC-3972 with 2.3 inch clip hook and 67 inch lead 20AWGHand made in Chicago! Crimped Hand and Quality GluedOur Very High Strand Cable provides these high current drives loss of any flexibility. 16AWG on almost all our leads. These test tracks will not burn easily due to accidental brushes with soldering iron or accidental current surges. Notice the temperature and the bonding being melted. I... snap, crackle and pop rorithedino Posts: 1 Joined: 04 June 2019 04:53 Post by rorithedino » 04 June 2019 05:03 So I listened to a disc and finished so I flipped the recording and the arm automatically rose and went to the starting place. So I put it to an end for it to do again on the other side and did it, but after it did that just stopped. I tried to turn it on and turn it on. Changing the turntable around a little cuz that's what I did to make it start working the first time I got it. So I called my dad and he started playing with him and at one point he shakes it and the turntable starts. For some stupid reason he decides to mess with the needle thinking that this is the problem and ends up rubbing his finger all over and breaking the little white needle holder off. So at the moment he's messed with it so much that the turntable doesn't work again and he's literally just shaking it up to try to fix it. Because he's a literal f***** g dumbass. And he's just saying well idk what to tell you, you might just need a new one, it's like 50 years, so yes, that's about it. I'm sorry it's not very descriptive. My girlfriend told me I should try this and that's all I really remember. I'm sorry if it's not too descriptive. but please help I like this so much it's from my grandfather and I really don't want to get rid of it or i have to get a new one. This is the tower table. this is the broken needle vanamaru senior member Posts: 681 Joined: 24 Mar 2015 09:05 Post by vanamaru » 04 June 2019 09:17 I think it is not much of a quality record player. So if you get advise to get a new one it might improve the remarkable sound. But you say it has a sentimental value to you. The question to establish this depends on how badly it has been messed up. It is the player type changer, so it has quite complex mechanics where everything needs to be aligned properly in order to work. If your father dismembered something, it may not be possible to recover. Usually TT's that old need re-lubrication - fat hardens in sticky goo and nothing works anymore. But you can't use oil here and there. Colo. the system must be taken apart, cleaned and greased with appropriate lubricants (sometimes there are 2-3 different types of lubes used). What I would do is try to get another package of the same or similar from the second-hand store or a friend or internet. I'm sure not all of them have been thrown away yet. Then, you can replace it or try to repair one by using another as a reference. Don't worry about broken stylus - it's worn for now in anyway (this type of stylus is good for a few hundred hours of listening if it has diamond tip and 50 hours with sapphire). Also, this ceramic cartridge can be going bad, too - the red rubber side you will see can lose its original elasticity and make the entire basket unusable. Maybe you can fit another ceramic basket in the headshell and there are some good choices then. You can't use more modern MM trolleys with the rest of the system without additional preamp. It's worth taking time to consider replacing The TT with some better vintage one that fits into the frame and adding IRAA premp and using MM carts. The console can be pleasant sounding and you keep working. But this needs some skills and knowledge about electronics. KentT vinyl addict Posts: 5168 Joined: 13 Mar 2008 19:44 Location: Athens, TN Post by KentT » 04 June 2019 21:19 This is a voice of music change, and this changer has Micro-Touch (and tracks from 2 grams). You need to get rid of all the old gunked up fat, lubricate correctly, reassemble the correct mechanism, and the changer should be good to go free of problems again. The tracks are still available from the VM website. Site.
