Irrigation Product Manuals Disclosure: WaterMaster (Orbit) products are not associated with Watermaster in any way. If you have questions or problems with these products, visit their website or call 800-488-6156. The ACC brings the veritable modularity features for the hunter line's most advanced large-scale commercial controller. The adaptive design not only allows the configuration of the number of desired stations, but also facilitates the upgrade to two-way communication with a Central Control System hunter. What really sets ACC apart is its absolute power. Smart overlay settings and powerful transformer allow ACC to run up to 6 programs simultaneously, packing maximum watering in the shortest water window. Real-time flow monitoring allows the controller to dynamically respond to overflow conditions per station and track system water usage. The ACC has a total of 6 independent and 4 custom programs and the ability to assist the water manager in compliance with watering windows. In addition, the acc's large backlit LCD screen provides the user with a convenient way to customize the on-screen station and program names. ACC also has built-in support for the water-saving Solar Sync sensor. Hunter ICC is an affordable and complete internal/external controller for commercial applications. Designed with customer needs in mind, ICC offers simplified dialing programming and an impressive range of features found in controllers that cost twice as much. ICC is a professional-level product. The large controller enclosure provides ample wiring space. And the ICC is full of essential features that landscapes demand like rain bypass circuit, primary and secondary protection of power surges, seasonal adjustment/water budget, simultaneous program operation, programmable master pump/valve circuit, programmable rain delay, cycle and immersion, four independent programs with four different day time scheduling options and eight hours of starting each, plus much more. I-Core is the Hunter controller to require commercial and cutting-edge residential applications. Loaded with innovative features such as state-of-the-art flow monitoring, quick access to the system overview, a factory-installed SmartPort®, six-language capacity, and a bold, backlit display, I-Core should be considered for most high-end irrigation projects. A big reason why I-Core is so unique is its sheer versatility. The plastic cabinet version is expandable from 6 to 30 stations, and the metal cab model can support up to 42. The addition of a dual two-wire module can even expand the station's capacity to 48. Stainless steel and pedestal models are also available, providing a wide range of cabinet options. With other additional options, such as a ROAM or ROAM XL remote control and Solar-Sync focused on built-in conservation, the possibilities of I-Core are all but unlimited. For isolated locations, energy-restricted areas, the Hunter Node is the smart and reliable solution. The knot is mounted on the solenoid of a valve quickly and easily, and without additional screws, drills or wires. The unit's solid construction and waterproof exterior ensure it can handle the harsh environment of a valve box. The Node is powered by one or two 9V batteries and provides standard or extended power throughout the season. Together with exceptional reliability, the Node has an easy-to-program LCD screen, the ability to control a Master Valve and uses the standard Programming of the Hunter controller with 3 programs and 4 start times per program. The set of programming options and

robust reliability make the Node a compact yet powerful irrigation controller with the flexibility of battery power. The Hunter Pro-C controller is an affordable and complete internal/external controller for commercial and residential applications. Designed with customer needs in mind, the Pro-C offers simplified dial programming and an impressive range of features. Pro-C is a professional-level product. The controller enclosure offers ample wiring space and is filled with essential features that landscapes require such as a rain sensor bypass circuit, primary and secondary energy surge protection, seasonal adjustment/water budget, programmable master pump/valve circuit, programmable rain delay, three independent programs with four power options of different days and four matches each, plus much more. Pro-C is a controller that does the job efficiently and cost-effectively. Designed with customer needs in mind, the Simple and Reliable Controller (SRC) offers a simplified simplified controller programming and an impressive range of features typically found on controllers that cost twice as much. Although it is affordable, CRS is undoubtedly a professional-level product. The large and beautiful controller cabinet, complete with a protective door, provides your controller with a clean and professional appearance. The SRC is filled with the essential features that landscapes require (such as a rain sensor bypass circuit and primary energy surge protection), but without some of the unnecessary frills that often lead to the contractor calling back. The SRC is so easy to use that after reading the User Guide completely, you will need very little after installation. There is an abbreviated instruction sheet inside the controller port for quick reference later. After a few uses of this controller, you can be sure that SRC is a product that does the job efficiently and cost-effectively. This incoming home controller offers simple operation with intelligent Solar Sync compatibility. With easy-to-configure control for up to 8 stations, including 3 programs and 4 start hours each, X-Core is the perfect solution for residential applications. Connect the revolutionary Solar Sync ET sensor and the X-Core is converted into an intelligent controller that regulates irrigation runtimes based on locally measured climate. X-Core is also compatible with Hunter remote controls for fast, wireless irrigation activation. Installation, operation and maintenance are designed to be simple and yet provide optimal efficiency and reliability. This advanced-design hybrid controller provides exceptional scheduling flexibility to accommodate a wide variety of landscape applications. In addition, its modular design offers convenient remote programming. The Irritrol family ® Total Control-R is proof that advanced design controllers don't have to be complicated. Designed to meet a wide variety of watering requirements, the easy-to-program total control series is available in models ranging from 6 to 48 stations. Programming flexibility is provided by four independent programs, 16 total start times, and a 365-day calendar for odd/same scheduling. With nine different models to choose from, the MC Plus Series will handle a wide range of scheduling versatility. This easy-to-program 6-season timer has text messages in English, Spanish and French. Convenient one-touch sliding bars adjust the watering duration of each season, making it ideal for sun versus shade, lawn versus flowers and different soil conditions. The 3 independent programs can set your watering time from 1 to 120 minutes. It is easy to install and has great water conservation features such as rain delay. 6-Stn Outdoor Slide Control This timer can be used for irrigation systems that have up to 6 zones or valves. With a convenient remote control, watering a specific zone or running your entire program becomes a breeze. The remote control allows you to operate individual stations up to 200 feet. This reduces time wasted walking back and forth for the timer during testing, spraying settings and repairs. It also allows you to locally water specific areas from the front porch without interrupting the timer setup program. It has two independent programs that can be set to run the squeaper system multiple times in a day of 1 to 99 minutes. If it rains, there is a convenient rain delay button that delayed your program for 24, 48 or 72 hours. This manual describes how to install, operate, and maintain your controller. Please read these instructions carefully. Inspired by the intelligent use of water, the ESP-LXME traditionally takes wired control to the next level. Enjoy water-saving features, a time-saving user interface, and the ability to add more stations than ever before. From the large LCD display to the easy-to-use display to easy-to-follow warnings, it's designed to help reduce installation costs and troubleshooting time. Modular designs make the ESP-LXME perfect for a range of small to large commercial projects, from simple to more complex. Choose from a variety of season counts, accessories and optional features, paying only for what you need now, with the option to add more in the future. The TBOS-II battery-operated line of chargeable irrigation controllers allows the use of automatic irrigation in challenging areas where AC power is not available. Its water-saving programming offers maximizing water efficiency, allowing you to build highly customized programs. With seven advanced programming features, THE TBOS-II reduces setup time and eliminates repeated trips to the controller, resulting in water-efficient programs and lower operating expenses. The Weathermatic ProLine 1600 Series offers for each work and evolving landscapes. The manual test configuration allows for a full walk-thru in a fraction of normal time, running a manual test from 10 seconds to 10 minutes in 10-second increments. O On board board displays the electrical current reading of each zone for quick troubleshooting and a proactive approach to maintenance. No battery required! The onboard memory chip retains time, date and program information, even during a power outage. Eliminate flow by setting the maximum allowable execution time and minimum immersion time per program. Automatically comply with local water restrictions; eliminate the irrigated water lost for evaporation in the heat of the day; stop irrigation on lawn maintenance days; never water on the day of an annual event. A monthly percentage of watering budget can be set per program to automatically adjust zone runtimes for seasonal changes. The Weathermatic SmartLine® irrigation controller is designed to maintain the health and quality of your landscape while conserving water to minimize operating costs. The SmartLinecontroller® can run standard timed watering schedules or, with the addition of the optional SLW series on-site weather station, the Controller's Auto Fit mode will analyze on-site weather data to automatically set the best watering times for each zone, based on Weathermatic's patented methodology. Auto-Adjust will also save water by automatically setting execution and immersion cycles to minimize flow. Get help from those who help the PROS We are more than just irrigation. CALL US TODAY.
