And today I will introduce to you the second game in the series, The Room Two with gameplay and action built on its previous game. In this game, the story revolves around an element called The Null with many secrets that it hides. The game will also give players a gothic atmosphere combined with steampunk, creating a complex atmosphere for players to enjoy and admire all the quintessential sensibilities it brings to the player. PICK-UP-AND-PLAY DESIGN The Room series is all puzzle games, and it gives players a new, accessible, but very difficult to give up feeling after the first play. The game was developed in the form of puzzle objects, where players must combine all their puzzle skills just to unlock an object. All items are built with authentic 3D graphics, making their surfaces realistic, enticing players to explore and solve it. The number of puzzles in a game can reach more than a hundred, as they are also related to the challenging creativity of the player during puzzle solving. The game also causes players to examine a secret object, then explore the surface, then gradually enter. The more enthusiastic the player is to solve the puzzle, the more new things will unlock, surprising the player, and at the same time, stimulate their desire for puzzle solving. REALISTIC 3D graphics, INNOVATIVE TOUCH CONTROLS Common puzzle games often have a flaw, which is the realism level of objects and an unrealistic environment. But for The Room Two, such things do not exist, as players will experience the most environment thanks thanks its advanced 3D graphics engine. Everything is built meticulously and subtly, even bringing a new tactile experience, allowing players to feel the surface of objects. The game was successful not only thanks to the graphics, but also thanks to the creepy sound, mixed with horror and curiosity, which made players more involved in the game. In addition to these things, the game will give players more surprises and the latest, such as a physical mechanism that makes each item more realistic than ever. SEARCH FOR ARTIFACTS, UNCOVER THE MYSTERIES WITHIN THEM The Room Two is rated as one of the best puzzle games thanks to extra elements like finding keys, objects, and many other things in the environment. What's unique is that even if players find important items, they still have to unlock them to retrieve the secret encapsulated inside. Players must use actions such as swipe, tap, spin, twist, pinch, and even solve mathematical problems. Everything that players often see on ancient puzzles around the world will be reproduced in the game. Because of that, the game play time will last longer and attract players to this world with a desire to reveal everything. EXPLORE DIFFERENT LOCATIONS The Room Two will have a story that follows the previous game, but the difference is that instead of players turning an object, they can this time explore new locations. It can be said that each of these sites is a new challenge, and they are built with a realistic 3D environment, creating an authentic feel for players. The variety of locations will bring players to a whole new world, dotted with illusion and reality, causing the player to be confused but excited at the same time. The game will also focus on building each location with as many puzzles as possible, as well as adding more artifacts for players to collect and unlock their secrets. MAGIC LENS, A NEW LEVEL OF PUZZLE SOLVING In all games in The Room, the series, the player will be equipped with a special accessory that has the greatest role in the entire puzzle process. These are called magic glass lenses, helping players see what the naked eye can't see. There are also many puzzles built into an illusion world, and only when the player uses this lens can they solve them. Throughout the game, the constant use of lenses will help players progress with the game when there are countless things carefully hidden and surprise players as they look through the lenses.
