Brainpop scientific method quiz answer key

Edit Share Scientific Process is a BrainPOP Science video launched on March 28, 2020. Summary [edit | edit source] Tim and Moby visit a museum and see dinosaurs. Tim responds to a letter about the scientific process. Tim and Moby talk about scientific process. At the end, Tim strikes another pose as loud rock music plays, echoing throughout the museum. Special thanks to the University of California Museum of Paleontology for using their asteroids and dinosaurs article. Appearances[edit | edit source] Transcript and Quiz[edit | edit source] Scientific Process/Transcript Scientific Process/Quiz Referenced[edit | edit source] Popular[edit | edit source] The scientific method is an empirical method of acquiring knowledge that has characterized the development of science since at least the 17th century. Cultural[edit | edit source] Somewhere between 33% and 50% of all scientific discoveries are estimated to have been stumbled upon, rather than sought out. This may explain why the researchers so often express that they were lucky. Louis Pasteur is credited with the famous saying that Luck favors prepared minds, but some psychologists have begun to study what it means to be 'prepared for luck' in the scientific context. Research shows that researchers are taught various heuristics that tend to exploit chance and the unexpected. This is what Nassim Nicholas Taleb calls Anti-Frailty; while some systems of the study are fragile in the face of human error, human bias, and randomness, the scientific method is more than resistant or hard – it actually benefits from such randomness in many ways (it is anti-fragile). Taleb believes that the more anti-fragile the system, the more it will flourish in the real world. Quotes [edit | edit source] Tim: Says here that this eoraptor was recovered from a tar pit.
