PaidUsually commercial software or games are made for sale or serve commercial purposes. Every year, we download less content to our computers: due to technological advances, music consumption has turned to streaming thanks to Spotify instead of MP3 downloads, and watching movies and series on video-on-demand, Netflix is the industry's leader, rather than downloading them to the PC. But that doesn't mean the downloads are dead. Mainly because not all artists are available on the Swedish music service, and secondly because not all of my favorite series are available on Netflix. Like in Game of Thrones. The king of P2P downloads. Therefore, no one should be surprised that we continue to download content to the PC, even though we don't do it that often, and one of the best methods is definitely to use BitTorrent to exchange files peer-to-peer or P2P. And although this protocol has its own official download client, uTorrent is an all-time favorite to download all kinds of videos, audios, documents, ebooks, and software to computers. uTorrent or BitTorrent? What's the difference? Even though we just said that muTorrent, which is how to really pronounce it, is absolutely fantastic, and you're probably thinking that this is much better than the official app to download torrents for Windows, that's not entirely true. Some people still say that this client is easier and helps downloads to be completed faster, but we have to say that since 2006 both desktop applications have been developed in parallel by the same company and it is hard to believe that in the case of preference one development over another would make their money with software that does not carry the name. Even though it does not show shows Clear differences, the program created by Ludvig Strigeus still has many more fans. Highlights Search for torrents from the app or add ones downloaded from sites like The Pirate Bay and Kickass. Pause, withdraw and resume transfers at any time. Assign the bandwidth to be used by each download Progressive downloads, which allow you to play incomplete downloads. You can create torrent files that you can share with other users on the peer-to-peer network. Access to complete statistics, such as average, maximum and minimum speed, as well as the number of seeders and leeches. Possibility to remotely control downloads using a mobile device uTorrent Remote. Set the download queue to determine the maximum number of active downloads. To optimize the maximum download speed, change your connection settings. uTorrent Pro is the most demanding users of all I've said up to this point related to the free version of the program. But if you're fed up with getting into the more or less invasive commercials offered, you can always go for the Ad-Free version priced at \$5 a year. Forget unpleasant advertisements while downloading. Also, if you don't have enough to remove ads, you can always sign up for pro edition for \$20 a year to enjoy a variety of features: no ads, instant previews of torrents while downloading, antivirus protection and access to new features before anyone else. How to download faster? This is the question that many users ask themselves: how to optimize download speedorrents? Exploring the Internet you will find many tutorials that will tell you to open this or the other port, set the bandwidth limiting the upload speed and configure the download queue with this or the other number of simultaneous downloads. The truth is that we have to take into account a series of details that will help us to download more quickly, but do not exaggerate everything we read on the Internet: Open the port assigned to the program or change it to another to avoid being blocked by a router or firewall. If you don't know which one to choose, choose a random one. Control the number of active downloads: Limit the number of transfers so that bandwidth is not shared between too many downloads. Share the torrents to download, even if it's only for a little while. This saves you from receiving download speed penalties. The more users share a file, the higher the download speed, so keep an eye on the number of cores. Upgrade to the latest version of the program: the updated client always works better than an outdated one, and it's much more secure.
