No man's sky drop pod coordinate data not working

ksj8ak2: Hello. Building and using a Signal Enhanceer inside the structure will often reveal the location of another Structure of the same type that is very reliable ('Locate nearby structures'). Can you fit one of the suckers inside a drop pod?ksj8ak2: This has two advantages: a) You can't accidentally crush yourself by pressing the right-click button once for multiple people after placing the Singal Booster b) No need for repeated use of expensive and rare Drop Pod Coordinates or navigational data items. Just accelerate around in the planet's atmosphere at low altitudes, shoot your ship scanner whenever it has been recharged, will, with a little luck and patience, spare you to use these completely. I usually get 2-3 Drop Pods/Production Facilities/Operations Centers out of every single one I find using this method, until the locations start repeating. If they begin to repeat, fly to a different part of the planet. Rinse, repeat. With any luck, you'll get new ones, instead of the structures you've found. Thanks for to the heads up on this. Damn, I just need to work and want to go home to try this. This game is costing me... To upgrade your Exosuit, you have one of three options to choose from: Signal Booster To locate drop clusters, you need to build a Signal Booster. To build this, just up on the D-Pad for PS4 and X1 or Z for PC and move through the list until it appears. Once you have built the Signal Booster, interacting with it will prompt you to insert a pod drop coordinates data. After the chip has been installed, the pod1|2 drop scanning option appears. Exocraft You also have the option to search for drop clusters using an Exocraft with Signal Booster Upgrade Sigma technology installed. If you have this technology installed, just press the scan button or open the quick menu to scan the drop clusters. It is likely that you will also need drop pod coordinates data, but at the time of writing the article, I'm not sure 100% Space Station While your question suggests you won't continue to be transformed between systems, this option is still available to buy for units if you don't have the proper resources to scavenge the planet. However, if you choose this route, be sure to avoid the star explorer system. These systems lack space stations and you won't be able to get the Exosuit upgrade. After your hunting is complete and you have located the Exosuit upgrade (either on the factory, moon, or space) it will provide one of three different types of general inventory upgrades, which are standard inventory space goods, it is a separate inventory space dedicated to stacking Technology products, which is a separate inventory space that decides to install the technology. Additional sources (provided by chat discussion) The topic of this article is from the Origin update. The information from this article is that as of November 9, 2020. No Man's Sky > General Discussion > Topic Details Drop Pods Coordinate Data So after a very long time trying to increase my exosuit bearing weight I'm a little disgruntled. Given that we are also into the future with great technology WHY do these coordinates keep sending me to the other side of the planet??? Can they just send me up to a 7,000 miles each time because the nearest pod is basically 900 i can't detect? Please cut out the grind. It resembles planet charts. Surely I want the one closest to me every time? So if I buy 30 at once why did I ever choose to keep going to the farthest one? Note: Used only for reporting spam, ads, and problematic posts (harassment, combat, or rudeness). No Man's Sky > Bug Reporting > Topic Details Let's talk about Drop pods and signal boosters. I feel like this has not been resolved yet but every time I use a signal booster with a pod drop data coordination it keeps sending me back to the previous Drop pods. It's the same every time. Can we please get a function that whenever a Drop pod has been used it disappears from signal enhancement? I mean there was an existing function that turns the red light when a drop pod was used it shouldn't be too difficult to link the two topics together, I wasted like 7-8 Drop Pod coordinates in like 20 minutes because even tho I've moved at least 2000 units from it , it still sent me back to the first one. I know I can only waste all my warp cells, go to any next system of yaddi-yadda station buy exosuit upgrades. But I love finding my upgrades on the planets. There is no reliable way to do this right now. Please, this has been a problem since the casing drop site has been implanted. I think it was more reliable at a certain point now it's just useless. Note: Used only for reporting spam, ads, and problematic posts (harassment, combat, or rudeness). 20Drop Pod Coordination DTEncrypted Navigation Data Hello Games via Polygon You will never have enough inventory space in No Man's Sky. It was true when it launched three years ago, and it's true now with the Beyond update. Sure, you can now keep 10,000 units of an order, but you're still limited by how many types of items - how much ad space - you can have. Exit direction hanger, go to the right side forward. Right next to appearance Modifier, there will be a supplier selling Exosuit research. There is a cylinder next to him with a backpacked three-dimensional shape inside where you will be able to Buy your upgraded exosuit. They start at 10,000 credits and for each additional position you buy, the price will increase by 10,000. AnOmaly An Exosuit Upgrade is available every time you call Anomaly into a new system. Hello Games via Polygon Every time you call Anomaly into a new system, you will be able to buy an upgrade from Iteration: Selene. Face nexus from where you park your ship, go to the left side of Anomaly, and then go all the way back. There are several suppliers here - Iteration: Selene is in the back left. Just like on the usual space station, there is a cylinder with a hooly figure where you can buy your upgrade. The price will increase by 10,000 credits per upgrade here. Drop Pods Search upgrade in Drop Pods is the most effective way to upgrade your storage space, as it completely depends on luck. Do not rely on this method, but if you happen on Drop Pod, know it's an option. Drop Pods will have a blue antenna icon. Hello Games via Polygon On a planet, build a Signal Booster from your Tech > Portable construction menu, and use it to Locate Nearby Structures. You are looking for a beacon symbol - it is supposed to look like an antenna, but it mostly looks like a rocket ship or wheat. (Every time you use A Signal Booster, you'll need to access whatever it marks before it will find something else.) Drop Pods need to be repaired before you can request your Exosuit upgrade. Hello Games via Polygon If and when you find a Drop Pod, you will see a similar cylinder on the station, but this will be broken. Fixing it will be resource intensive (one we find essential Oxygen, Sodium Nitrate, Ionized Cobalt, and Antimatter), but once fixed, you'll get a free Exosuit Upgrade. I started a new game for NEXT and I had big inventory problems, I wanted to upgrade my exosuite but I couldn't figure out where to find the data coordination pod drop to be able to scan for drop clusters with signal enhancement. Anyone know where to get these or what should I do to get inventory upgrades? Page 2 21 comments
