Medieval scribes scraped the ink from animal skin sheets to reuse the pages. Many artists have painted on one image with another. And now scientists have an example of the Americas as well, as stated in a new study in the Journal of Archaeological Science: there are only a handful of manuscripts left before the Europeans came to the continent. They are made of leather strips covered with white plaster like the substance called gesso. The one researchers have studied is called the Codex Selden, and researchers have been wary for decades now that the book books hide something beneath its surface. But the Mixtecs who created the manuscript used inks made from plant materials. This means that there have been no techniques that would give researchers the equivalent of X-ray vision, allowing them to see a hidden image without destroying the surface of the manuscript as we know it. A fairly new technique called hyperspectral imaging has changed that. It allows researchers to take very high-resolution images at many different wavelengths of light. These images can then be added and subtracted against each other to reveal ghosts under the surface of a manuscript. The rare book community has been using it for a few years on a series of texts such as Archimedes Palimpseste, a lost manuscript of Archimedes hidden behind a 13th-century religious text, and the first map to include the word America. But it is the first pre-Columbian text to be scanned with the hyperspectral imaging.codex manuscript (An image from the study shows what the scans revealed in two pages (top), and what the reconstruction of these pages looks like (bottom). Snijders, Zaman, and Howell, Journal of Archaeological Science: Reports. Volume 9, October 2016, 143-149.) What the analyses revealedThe researchers have not yet scanned all the pages, and note in the article that interpretation cannot really occur until the entire manuscript is scanned. But they were still able to identify individuals in the original text. As they scan more, they may be able to connect these characters with historical characters. Although the text has not been translated, it is still exciting for a few different reasons. Of course, when you have less than two dozen manuscripts from an entire region and the period of history, all the additions are exciting for researchers. But from these early scans, the researchers were able to understand that the hidden manuscript is a different style from one of the others that survived. This means that it could offer a new perspective on the archaeological discoveries of the region. The hidden text also flows sideways through the page shelves, rather than from bottom to top as the manuscript does on the surface. Now that they have confirmed that there is more to see beneath the surface, the researchers hope that the rest of the book can be scanned and even that these pages can be revisited with stronger light at different wavelengths to better understand the book and its history. NOW MONTRE: This guy is doing flip books using nothing but a puncher holeMore Business Insider Tech stocks could be under pressure as the stimulus plan President-elect Joe Biden is working his way through the U.S. economy. Looking at the markets with an eye on the main chance, Raymond James strategist Tavis McCourt sees both risk and opportunity in the current market conditions. The opportunity, in his view, stems from the obvious factors: Democrats won both Georgia Senate seats in the vote in the second round, giving the support of the majority of the Biden administration entering both houses of Congress - and increasing the chances of meaningful budget support getting signed into law in the short term. More importantly, the coronavirus vaccination program is underway, and reports show that Pfizer's vaccine, one of two approved in the United States, is effective against the new strain of the virus. An effective immunization program will accelerate the economic recovery, allowing states to relax locking regulations and get people back to work. Risks also come from the areas of political and public health. House Democrats have passed impeachment articles against President Trump, despite the impending natural closure of his term, and the move reduces the chances of political reconciliation in a highly polarized environment. And although the COVID strain is matched with current vaccines, there is still a risk that a new strain will develop that is not covered by existing vaccinations - which could revive the cycle of containment and economic decline. Another risk That McCourt sees, beyond these two, would be a sharp rise in inflation. He does not rule that out, but he feels it is unlikely to happen soon... Produced/service inflation is really only a possibility after the reopenings, so the market feels a bit bulletproof in the very short term, and therefore the continuous rally, with Dems winning the GA races just adding fuel to the raise fire, noted McCourt. Some of McCourt's colleagues, among Raymond James analysts, keep these risks in mind and put their imprimatur on solid dividend stocks. We looked at Raymond James' recent calls, and using the TipRanks database, we selected two stocks with high-yield dividends. These buy-rated tickers bring a dividend yield of 7%, a strong attraction for investors interested in using the current good times to set up a defensive firewall if the risks materialize. Enterprise Products Partners (EPD) We will start in the energy sector, a segment of activity long known for both its high cash flow and high dividends. Enterprise Products Partners is an operating company that is part of the network that transports hydrocarbon products from wellheads to storage farms, refineries and distribution points. The company controls more than 50,000 miles of pipelines, marine terminals on the Texas Gulf Coast and storage facilities for 160 million barrels of and 14 billion cubic feet of natural gas. The company was hurt by low prices and weak demand in 1H20, but partially recovered in the second half of the year. Revenues reversed, with sequential growth of 27% to \$6.9 billion in the third quarter. This figure is down year-on-year, slipping 5.4%, but more than 6% above the third quarter forecast. Third-quarter earnings of 48 cents per share were slightly below forecast, but were up 4% year-over-year and 2% sequentially. Sequential, recently declared its dividend distribution in 4.20 cents at 45 cents per common share. Note this is up from the previous payment of 44 cents and the first increase in two years. At \$1.80 annualized, the payment yields 7.9%. Among the bulls is Raymond James Justin Jenkins, who evaluates EPD a strong buy. The analyst gives the stock a price target of \$26, which implies a 15% increase over current levels. (To see Jenkins' background, click here) In support of its bullish position, Jenkins noted: In our view, the unique combination of integration, balance sheet strength and EPD balance sheet remains the best in its class. We see epd as arguably best placed to withstand the volatile landscape... With EPD's footprint, demand gains, project growth and contracted ramps should more than offset the headwinds of supply and the decline in marketing results of y/a... It's not often that analysts all agree on an action, so when that happens, take note. EPD's Strong Buy consensus rating is based on a unanimous buys of 9. The average price target of \$24.63 per share suggests a 9% increase over the current share price of \$22.65. (See epd inventory analysis on TipRanks) One of the immediately recognizable stocks on the market is at and T. (T) The company is a long-time member of the S.P. 500, and has a reputation as one of the best dividend payers on the stock market. Att and T is a true giant of the large-cap industry, with a market capitalization of \$208 billion and the largest network of mobile and fixed-line phone services in the United States. Its acquisition of TimeWarner (now WarnerMedia), in a process underway between 2016 and 2018, has given the company a significant stake in the mobile content streaming business. The impact of the corona pandemic was modest in 2020, as the same pandemic also focused on telecommunications and networking systems, which tended to support AT and T activities, has declined. Revenues for 3.20 were \$42.3 billion, down 5% from the previous quarter. On positive notes, free cash flow increased from \$11.4 billion to \$12.1 billion, and the company recorded a net gain of 5.5 million new subscribers. The growth in subscriber numbers was driven by the rollout of the new 5G network - and premium content services. The company maintained its reputation as a dividend champion and made its most recent dividend statement for payment in February 2021. The at \$52 per common share, is the fifth in a row at the current level and is annualized at \$2.08, giving a return of 7.2%. By comparison, the average dividend for technology peer companies is only 0.9%. It has maintained its strong dividend for the past 12 years. Frank Louthan, an analyst at Raymond James, sees AT and T as a classic defensive value, and describes the current state of T as a state with the bad news baked. », that the shares are heavily short films, and we believe it's a recipe for the rise. The big names in the value of the ceiling are hard to find, and we think that investors who can wait a few months for an average reversion while locking in a 7% return should be rewarded for the purchase of AT and; T at current levels. Louthan opined. In line with these comments, Louthan values T an outperformance (i.e. buy), and its price target of \$32 implies a 10% growth margin over current levels. (To see Louthan's background, click here) What does the rest of the street think? If we look at the distribution of consensus, the opinions of other analysts are more generalized. 7 Purchase odds, 6 catches and 2 sales add to a moderate buying consensus. In addition, the average price target of \$31.54 indicates an increase potential of approximately 9%. (See analysis of AT and T shares on TipRanks) To find good ideas for dividend stocks trading at attractive valuations, visit TipRanks' Best Stocks to Buy, a newly launched tool that unites all tipRanks equity prospects. Disclaimer: The opinions expressed in this article are only those of the star analysts. The content is intended to be used only for informational purposes. It is very important to do your own analysis before making an investment. Experts are on the verge of achieving a quantum advantage, with unimaginable computing power that could unlock the true potential of machine learning. At a time when millions of people are running out of money and relying on their income tax refund or stimulus check, they will have to wait a little longer before they can deposit their taxes. February 12 marks the first date on which the Internal Revenue Service will begin accepting and processing returns. The tax season began on January 27 last year. Here are the main analyst stocks to buy in the first quarter. The S.P. 500 closed 2020 at historic highs with optimism surrounding additional government stimulus and a potential global economic rebound in 2021.At an 8.6% stake in its savings accounts, crypto fintech platform BlockFi offers an attractive option for investors disappointed by low rates.76.4% of cfd retail accounts lose money. Stop wasting money on commissions: Switch to Plus500 trading without commission! President-elect Joe Biden's \$1.9 trillion bailout package, released Thursday, includes three key tax improvements for 2021 that would help Americans across the spectrum of Most financial markets will be closed for the celebration of the life of the civil rights leader, the first since the protests over the murder of George Floyd activated massive protests across the country.Q: To reduce the death tax on my estate, if I put my IRA Roth in an irrevocable trust now and after my spouse and I die four years later , do my children then have six or ten years to invest all the money before they have to dispose of the Roth money from the trust under the new rules of the SECURE Act of 2019? A: John, you can't put a Roth IRA IRA confidence while you're alive. You can move the Roth IRA assets from the Roth IRA and then put those assets into the trust, but the trusts can only own roth IRAs than inherited Roth IRAs.Ad-PSLWhy this ad? Announce with usThe euro-dollar exchange rate is re-impacted in the 1.10s as its 2020 decline still extends, but the weakness should be a short-term capital gainA occurs when you sell something for more than you spent on it. Every taxpayer should understand these basic facts about capital gains tax. The idea that value stocks are finally about to wake up after a decade of sleep is almost a joke in financial circles. What is at least slightly different from Vanguard's point of view is that its model suggests that investors have been right to avoid value stocks, at least until recent years. Our research indicates that there is a value premium and that the recent outperformance of growth stocks can be explained in part by the downward trend in long-term inflation levels and the lack of a significant acceleration in earnings growth over the past decade, the firm said. Investor Business DailyThe Dow Jones slid lower amid fears that Joe Biden's massive stimulus package could lead to higher interest rates or tax hikes. The GM stock has reversed. Erstattung der rund 3700 - f-r Deutsche in einigen FullenInvestor's Business DailySome left-for-dead penny stocks are now billion-dollar companies, thanks to the rally in the S.E.P. 500 and other indexes. Investor's Business DailyMarijuana stocks have surged as a Democratic Senate adds to the momentum of cannabis legalization. Are there good pot stock purchases now in the midst of profitability challenges? Major U.S. stock indexes hover around historic highs, and a common question today is whether the valuations of some companies could be overburdened. However, some operate at the other end of the spectrum, and could still offer investors untapped opportunities. Ram Selvaraju, an analyst at H.C. Wainwright, points to Sorrento Therapeutics (SRNE), one of these companies. Selvaraju rates SRNE a Buy with a price target of \$30, implying a 275% increase over current levels. (To see Selvaraju's background, click here) So what is behind the optimistic outlook? Well, for starters, Sorrento has a stake in two cell-based immunotherapy companies that could generate value in Sorrento stocks over the next few years. One is Celularity, a clinical cell therapy company focused on cellular drugs for cancer, infectious diseases and degenerative diseases. Celularity is expected to go public later this year through a merger of SPAC with GX Acquisition Corp. The value of the shares of the merged company following the closing of the transaction will be approximately \$1.7 billion. Selvaraju estimates that Sorrento's position is expected to be worth \$200 million in the region. The second company is NantKwest, which signed a merger agreement with ImmunityBio. The transaction is expected to close in 1.21. Sorrento owns approximately 8.2 million shares of the clinical-phase immunotherapy company. These are currently worth about \$121 million, according to NantKwest's recent share price. In addition, the analyst points to Sorrento's growing portfolio of assets covering three distinct therapeutic areas (non-opioid pain management, oncology and COVID-19). In fact, on the covid-19 front alone, Sorrento has taken a broad approach and has a long list of diagnostic, prophylactic and therapeutic offerings in the pipeline, with updates likely to come quickly and furious. These include two rapid detection tests; COVI-STIX, for which the company filed an application for Emergency Use Authorization (USA) in the United States in December, and COVI-TRACE, which Selvaraju said could be useful at any mass gathering. We believe that the incentive to facilitate the large-scale and even ubiquitous deployment of the COVI-TRACE test is extremely high and governments around the world may seek to implement it in their respective regions, opined the 5-star analyst. Other covid-19 candidates include COVIGUARD - an antibody neutralizing SARS-CoV-2, COVI-AMG - a mature affinity-by-affinity version of the antibody neutralizing COVIGUARD, a neutralizing cocktail of antibodies called COVI-SHIELD and COVIDTRAP, an ACE2 receptor lure, designed to mimic the mammalian ACE2 receptor that acts as the main portal of the SARS-CoV-2 virus to penetrate human cells. He has been relatively quiet when it comes to other analyst activities. In the last three months, only 2 analysts have issued ratings. However, as they were both Buys, the word on the street is that SRNE is a moderate purchase. Based on the average price target of \$25.50, equities could rise 219% over the next 12 months. (See analysis of SRNE shares on TipRanks) To find good ideas for healthcare stocks that trade at attractive valuations, visit TipRanks' Best Stocks to Buy, a newly launched tool that unites all tipRanks equity prospects. Disclaimer: The opinions expressed in this article are only those of the star analyst. The content is intended to be used only for informational purposes. It is very important to do your own analysis before making an investment. How does a cyberattack like WannaCry work? Investor's Business DailyVirgin Galactic and other space stocks surged Thursday in hopes of a new space-focused exchange-traded fund. Although it is known as the manufacturer of post-it notes, scotch tape, and bandages 3M does adhesives, abrasives and chemical companies need to do what they do. It is about to rebound economically. Four things could burst the rational bubble in equities, says Mohamed El-Erian - even if they are not likely to happen right now. Quantum A.I. is expected to help transform life as we know it as the pension crisis is not as severe as it looks, and also worse. This paradoxical situation exists because of the way we are trying to assess the state of pension funding. Financial preparedness for retirement varies so widely that this average creates more confusion than insight. (Bloomberg) -- In mid-September, Lloyd Blankfein, the former chief executive of Goldman Sachs Group Inc., suggested that investing in commodities was not a bad thing. Prices for most materials were right next to pandemic troughs and the asset class was still very much the ugly duckling. Fast forward by four months and raw materials are up. Goldman Sachs, Bank of America Corp. and Ospraie Management LLC have all called for a bull market that stimulus measures and vaccines help the world emerge from the coronavirus crisis. JPMorgan Chase and Co. also joined the chorus, advising customers to boost their exposure to materials while reducing investment in bonds.Commodities have not been as sexy since the mid-2000s, when China was stockpiling everything from copper to cotton, while poor harvests and export bans around the world boosted food prices, eventually topple governments during the Arab Spring. The commodity index is now beginning to look, with a large measure of commodity prices reaching its highest level in six years. You suddenly have the whole world to look at commodity markets, said Heber Cardoso, Chief Commercial Officer of HedgePoint Global Markets, ED's structured commodities unit. F Man Capital Markets which has just been acquired by two investment companies. You have low or negative interest rates fuelling inflation, and there are billions of dollars available looking for returns. There is a structural change in the way we look at commodities. Speculators are now piling up. Hedge fund bets on rising prices are nearly the highest since at least 2011 and are worth nearly \$120 billion, according to calculations that include 20 of the 23 materials in the Bloomberg Commodity Index.It took Wall Street a while to notice that a bull market for commodities was beginning to take shape. Calls for a rally were mostly made at the end of the year and early 2021, but Blankfein had quietly called him at a virtual metal-focused event on September 16, organized by CME Group Inc. From an inflation point of view, as an investor, I think that investing in physical sectors while they are is not a bad thing now, he said at the event. Everyone has decided that we will never again have inflationary pressure, that oil prices will never rise again. I don't think so. Since then, the theoretical value of bullish bets on commodities has jumped by more than \$30 billion. Until recently, there remained a corner of the financial markets for experts eager to analyze the fundamentals of supply and demand. Agricultural markets jumped by more than 30% maize recently reached a seven-year high, while soybeans and wheat reached their highest level since 2014. China is stocking up on American crops and Russia, the world's largest wheat exporter, has introduced an export tax that is double what it had previously planned. Even the beleaguered sugar market has seen prices jump to the highest since 2017.Copper has faced supply disruptions and the metal could still recover more than 20% to over \$10,000 per metric ton, said Francisco Blanch, head of global commodities research at Bank of America. Copper and some industrial metals face a different story, Blanch said on Bloomberg TV on Friday. There is a structural deficit that is going to be multi-year as we go to decarbonize the electricity sector, but also drive. The oil market, which has been hit by the pandemic that has kept cars off the road and planes grounded around the world, is also witnessing a recovery after the deployment of vaccines and Saudi Arabia has decided to cut production for the next two months. Speculators currently hold the biggest bullish bets on Brent crude in 11 months. Oil markets have certainly been the most constructive environment, both fundamentally and sentimentally, for several years, said Michael Tran, analyst at RBC Capital Markets. The deployment of the vaccine, the potential recovery of demand, the Saudi floor in this market, these all give investors a certain degree of comfort. The weakening dollar is bringing commodities back to the point where investors are beginning to wonder how much more equities could rise. Even in emerging markets like Brazil, interest rates are very low and there is more money available as investors exit government bonds, said Cardoso of HedgePoint. We believe that the dollar will be, in the long run, quite weak and, with another set of stimulus measures to come, that we are going to be in another circumstance in which the Fed is really going to have to work to control inflation, said Tom Finlon of Brownsville GTR LLC, a Houston-based trading and logistics company. When the dollar gets cheap, you have to buy something. This normally leads to higher commodity prices.
