Introduction to Canon EOS-50D ManualIt seems so strange when we talk about the Canon EOS-50D Manual without speaking the general camera specifications. So before you get further into the Canon EOS-50D Manual, here it is, general information about the amazing camera product, the Canon EOS-50D. As launched in 2007, its predecessor, the Canon EOS-40D received so much input and user feedback. Lessons from these things, back in 2008, the Japanese well-known camera manufacturer, Canon, released an improved version of the Canon EOS-40D, Canon EOS-50D. Canon EOS-50D Elegant elegant lookI do not see plastic in this product, because the overall case is made of magnesium alloy. This is a type of material that is commonly used for Canon camera products. The EOS-40D is colored black, representing a solid and strong view. The grip part gives a firm impression of the DSLR camera. With a total dimension of 146 x 108 x 74 millimeters and a weight of 730 grams, this camera could perform the best level of image creation. Canon EOS-50D SpecificationsIt is a product that comes in as a successor to the previous, EOS-40D. And as a successor, the Canon 50D comes with better features, hardware, and, of course, software. With upgrades in many aspects, of course this camera can work better than the previous one. Especially in resolution, this semi-professional camera delivers 15.1 megapixels to create a larger image. While in the data transfer system, USB 2.0 will definitely bring easy data transfer. The CMOS lens is also used with respect to the specific function of this hardware. You don't have to worry about shooting in low light, as the 50D comes with an internal flash. Unlike its predecessors, this EOS uses an lcd panel made of liquid crystals in the monitor. With this kind of screen you will be able to make a clear review of your capture result. Going in, DIGIC 4 software works very well as an image processor when processing images in real time. The software gives the opportunity more than 6 frames in every second in Continous Brust and is equivalent to a professional DSLR. Imagine what you can do with this ability; taking many rare moments like wildlife, sports, race, and many more will be so much more fun. In the autofocus side, the EOS 50D delivers a 9 AF-point that is designed for locking and exploring focus in a wider area. If paired with a high quality lens, you will be amazed by the result. ISO 100 to 6400 allows you to control the density of light, but you need to keep it low to avoid unwanted noise.
