Customer Service Watch Manual & Manual Manual, User Guide and Download INDIGO Night Light, Chronograph, Plain Language Instructions for 100 Lap Ironman Triathlon Using Date.Page2 FLIX Indigo Activation System. Timing chronograph chronograph timing using clock CHRONO (stopwatch) chronograph setting clock Chronograph chronograph term TIMER setting start/stop alarm setting Arming and disarming FLIX system Indiglo night light alarm MEMO INDIGLO activation clock has 6 buttons to prevent confusion, I identify each one in the lower right, left, face right position. Each button tends to have the same kind of features in most watch modes, and if you give only that information, you can figure out most things on your watch, so I'm going to give them those features first. MODE also moves you out of mode - the lower button on the left side called before. (Or run backwards inside the mode.) The button on the left side of the INDIGLO activates the indigo night light. STOP/RESET is also known as SCROLL DOWN (a button with a raised line) and the lower left button on the face changes down. The lower right button on the LAP-NEXT (three raised buttons) face, also known as Start/Split (LAP-NEXT), moves you forward in mode. Recall is also known as an up scroll-up where the upper right button changes up. SET, also known as STATUS, enters and removes from setting mode by pressing the lower button on the right. 1. Clock settings. First of all, press the MODE button to find the normal time mode until it appears at the time (the date is at the top). Press and hold the SET button until the word ENTER disappears and is replaced by the word TIME. Release that button. The word SET T1 or SET - T2 appears at the top of the display. This is where you choose between settings. The time zone or the second time zone. Press the Recall or Stop/Reset buttons to select between T1 or T2. Press mode or start/SPLIT button. You will notice that you can change whatever is flashing. To make changes, press RECALL or STOP/RESET. You can change seconds, hours, minutes, months, dates and years and choose between 12 hours (civilian) or 24 hours (military) hours. If you hold down the MODE or START/SPLIT button, you can look into everything you can change and start over. The START/SPLIT button goes through these things and MODE goes backwards, so if you want to pass something and back it up, you just have to switch buttons. Similarly, RECALL changes by changing the size and STOP /RESET by making it smaller, so if you accidentally pass the number you are trying to set, switch back to the other button. WATCH setting example You set the time and date in the second time zone. (For example, the other time and date settings are the same.) Press the lower left button (MODE) on the left until the date and time are displayed. Press and hold the lower button on the right until you see the word TIME on the display (SET). If SET T1 is displayed, press the upper-right button on the side (RECALL) to change it to T2 (to keep the second time zone unchanged if you set the first time zone T1). Press and release the lower right button of the face twice (START/SPLIT). Time should be flashing. Press and release the upper right button on the side repeatedly until the time position meets your needs (RECALL). After the required time, go to the lower left button (STOP/RESET) of the face and press to release it to back it up. Press and release the lower right button (START/SPLit) of the face three times, skip the minutes and months, and the date will start flashing. Press the RECALL button until you see the required date. (You can move backwards by pressing stop/reset.) Once you have set all the necessary settings, press and release the SET button once to tell the clock you have finished setting and lock those settings by 2. Chrono (Stopwatch) Press the MODE button once from normal time to go to chronograph mode. The display should be called CHRONO, the moment it is replaced by the chronograph readings. The reading shows the top wrap in small letters, the middle split in large letters, and the segment you are in at the bottom. (Or, if it's between segments, start the next segment.) The definition of these terms should be placed at the bottom of the chrono section if necessary. If you wrapSplit says something other than 00, you'll probably want to clear them before you start. See how chronos are stored and cleared (below). Press the timing with the chrono and release the start/split button (right side of the face). The chronograph starts. Laps and splits need to say the same thing because you're on the first lap. To indicate where the next lap starts, press and release the Start/Split button again. Stop for 10 seconds, as if it had stopped. It's actually, it's already done on the next lap, but it stops for 10 seconds, so you can see how well you did on your last lap. After 10 seconds, return to the next lap. The top line of the display displays the time that entered the current lap, and the middle line displays the time spent participating in the event. The bottom line tells you which segment you're in and which wrap you're on. Press and release stop/reset (left button on face) to stop the chronograph. You can use it to end or pause an event. The difference is that if you just want to pause it, you restart it by pressing the start/split button and releasing it. The chronograph continues as if it didn't stop. Pausing such a chronograph does not affect wraps or splits, except that it is not running during the pause. Press the Recall (top right) button to view wraps and splits. Displays the date, the number of segments displayed, and the total time of the event. Pressing and releasing again replaces that total time with a display of the average time per lap. Press & press again and you'll see the fastest lap time and the lap number of that lap, saying BEST. Press and release the button to see each lap and split of the event in order. To see another segment (a previously saved segment), press and release the MODE (lower left) button in cancel mode. To get out of recall mode, press and release the STOP/RESET button or leave the watch for a few minutes. When you switch to normal time mode, execution continues if the chronograph is running. In normal time mode, you can press the Start/Split button to view the chronograph at a time without changing it. Save and clear chrono You can store the lap and split of events in memory by pressing the stop/reset button and holding it until the word keep in the store disappears. Store that information in memory as a single SEGMENT, clear the information from the display, and prepare for the next event. After the last segment is saved, you can delete the saved segment by holding down the stop/reset button. It is called HOLD TO CLEAR SEG (and last segment number).If you continue to hold, the segment is cleared from memory and the segment number is replaced by the word all segs, so the entire display is displayed as HOLD TO CLEAR ALL SEGS. Release the button now and the segment will be deleted. If you continue to hold the display until it clears and you see a list of wraps and splits, all segments in memory are cleared. Segments can only be erased individually by erasing the most recent segment first. Divides the time of the chronograph term wrap event into separate chunks. An example of a lap is that if someone runs 5 miles, each mile could be a lap. Splits the time of the event from the start of the split event to the end of the lap. As an example of a split, if someone timed the race, press the START/SPLIT button when each person crossed the finish line. Each person's total time is recorded as a single split. A segment A segment is a group of wraps or splits in a single unit. Typically, users use these to isolate events because they save or delete entire segments as units rather than as individual wraps or splits. As an example of a segment, Thursday's run is saved as segment 3, and Friday is saved as segment 4. 3. Press and release the mode button until you enter timer (countdown timer) timer mode. Press and release the [SET] button once. This tells the clock that is ready to set the timer. At this point, the clock is #いいえ .. (# can be a number from 1 to 9 or a letter C.) Sales reps are the number of times the clock repeats a set timing sequence. For example, if the clock is set at two intervals, 1.6 minutes, and 1.5 minutes, select 3 as NO. OF REPS, the clock counts down 6 minutes, sounds an alarm, counts down 5 minutes, sounds an alarm and repeats this process three times. Therefore, you can set the number of times a sequence is repeated to something once, nine times, or in between. Also, if you set C (continuous), once activated, it will continue to repeat the sequence (amazing at the end of every countdown) until the clock stops. Know this information and set your NO. In charge.. Press the Recall button to increase the NO. Press OF REPS or press the stop/reset button to reduce the NO. OF REPS. This watch displays yes - no chrono at the end. This means that all personnel throughout the sequence repeat, and when the timer ends, the clock enters chronograph (stopwatch) mode and starts counting from 0, so if you check later, you will know how long it has been since the countdown ended. Press the recall or stop/reset buttons and select Yes or No for the CHRONO question when exiting. Whatever is flashing is whatever you choose. Note: If you select C for a), you will not see this messageNo. OF REPS reads Chrono in Use and releases the start/split button if the chronograph is already running (the countdown does not end until the countdown is stopped) or b). After the INT, the display should display a number from 1 to 9 at the top and it should be blinking. Below that, you're seeing slots for hours, minutes, and seconds. Set INT appears at the bottom of the display. The interval is 1 countdown. You can have up to nine of them, and each can be of a different length. Each interval can be identified by a number, and you can press the RECALL button to advance the interval number, or press the STOP/RESET button to move the number backwards to select which interval to set. After you select the interval that you want to set, press the START/SPLIT button to go to the time section that you want to set. You can set whatever is blinking. Press start/split to release to make the next flash. If you pass something, don't worry - just keep pressing start/split and you'll be back at it. (You can also use this button to change the interval you want to set.) You can set the time from 1 to 99 (or leave it at 0). Similarly, minutes and seconds can remain between 1 and 59, or 0. When everything is set for the interval, press START/SPLIT until the interval number flashes if you want to set a different interval. Press the stop/reset or call button to select a different interval. Once you have set all the necessary intervals, press the SET button to lock everything and tell the clock through the settings. Start/Stop Press the START/SPLIT button to start the countdown timer (during timer mode). To stop the countdown, press the same button. To reset the timer to the start setting, hold down the STOP/RESET button. Warning: If the timer is reset, hold down the STOP/RESET button to return all timer intervals to 0. If you hold down that button, make sure that the message you see is safe. Held to reset or clear all INTS. 4. Use the Alarm Setting MODE button to go to alarm mode. The display is momentarily called ALARM and then replaced with an alarm time. At the top, you'd see T1 or T2 followed by a dash, followed by a month and a date. Along the way, it displays the time and gives an alarm number at the bottom. This watch can have up to 5 alarms. To choose between five alarms, press the RECALL button. To set the selected alarm, press and release the SET button. T1 (or T2) starts flashing. This tells the clock if this alarm needs to disappear according to the time set in the first time zone or according to the time inThe second time zone. Press the Recall button to select either T1 or T2. Press the Start/Stop button (lower right button on your face) and the AM or PM will start flashing. Press the Recall button to select whether to turn off the alarm in the morning or the alarm at pm. Press the START/STOP button to flash the time. Press the recall button to select a time. If you have spent time, you can back it up by pressing the STOP/RESET button (lower left button of the face). Press the Start/Stop button to flash minutes. Press the recall button to select a time. After the required minutes, you can back it up by pressing the STOP/RESET button. When you press start/stop, the position of the moon begins to flash. If you want to turn off the alarm as a daily alarm, leave it dashed. If you want to turn off the alarm as an anniversary (annual) alarm, press the RECALL button to set the month. After the required month, you can back it up by pressing the STOP/RESET button. When you press start/stop, the position of the day begins to flash. If you want to turn off the alarm as a daily alarm, leave it dashed. If you want to turn off the alarm as an anniversary (annual) alarm or as an alarm once a month, press the RECALL button to set the date. After the desired day, you can back it up by pressing the STOP/RESET button. If everything is set the way you want, you can get out of setting mode and press the SET button to lock the settings. The alarm disarm alarm alarm mode (if not in setting mode) can be turned on or off by pressing and releasing the START/STOP button. A small symbol that looks like a clock appears above the M at AM or PM when the alarm is armed. If it is disarmed, that symbol is not there. If you see the symbol in normal time mode, at least one of the five alarms is armed. You can go to alarm mode and use the RECALL button to scroll through all five alarms to see which alarms are armed. 5. MEMO The last mode is memo mode. You have up to 3 pages and 10 notes, respectively. Each of these pages holds eight characters. You can use letters, numbers, or some punctuation marks for characters. Press the recall button to select a note. Press the Start/Split button to scroll through the notes page. Press and hold the stop/reset button to clear the note. To enter a note or change an existing note, press and release the SET button in MEMO mode. Press repeatedly to select the characters that you want to place in the space where the Stop/Reset button is blinking to release the recall (scroll up) or stop/reset (scroll down). To proceed to the next space, press START/SPLIT. When you're done, press the SET button to lock the note. In normal time mode, you can press the STOP/RESET button to get a last look at the notesIn memo mode. 6. FLIX system Indiglo Night Light INDIGLO Activation To activate FLIX, press the clock and press the Indigo Night Light Button (S6) 3 seconds to beep to enter night mode. On a night mode watch, the forward flick of the wrist with a sharp stop activates the indigo night light for 3 seconds. To avoid inadvertent startup and save battery life, FLIX is direction-oriented. Only the movement of the watch's lens in the direction combined with a sharp stop activates the indyglonite light. Movement in the other direction does not activate the night light of your indyglyo. Night-light.
