## Invicta subaqua noma vii

This product is not part of a combination water resistance (meter): 200 m Crystal Type: Flame Fusion Chronograph Function: No gender: Men's Dial Color: Blue, Silver Dial Material: Metal, Alka Case Size: 52MM mm Case Head: Gold, Dark Blue, Steelcase Material: Stainless Steel Bezel Function: Uni-directional Crown Type: Down stone Type: No Stone Quantity: 0 Stone Size: N/A Bright Color: White Luminous Material: New Light Movement Capacity: 5050 . C Movement Jewelry: 13 Band Material: Stainless Steel Band Length (mm): 230 Band Size (mm): 27.3 Buxua Type: Safety Exchange Band: No Catch Type: Safety, Deployment Movement: Honda 5050. C Quartz Model: 32119 Case Measurement: Thickness of 52mm: 19mm Case Material: Stainless Steel Bezel: Unidirectional Spin Crystal: Flame Fusion Dial Material: Black Yamupey Crown: Push/Inch w/Function Pushers Complications: 3:00-Permanent seconds, 6:00-1 /10th second and date window, 9:00-12 hours and 12:00-week ointing day: Stainless steel width measurement: 9-1/4 L x 26mm W Grip: Deeplwent Water Resistance: 20 ATM-200 m-660 Feet Weight: 12.7 oz There are no reviews. Leave a test report to enable JavaScript in your browser watch: ATM: Water Resistance Measures; Stands for Environment or Pressure Amount scan face before pregnancy; an environment equals 10 meters of water pressure. Bezel: Maintain inguit case and protect crystals; Sometimes complications like unidirectional or ratchetang movements, engraved or printed chapter marks, or such as a tachimeter are included. Chronograph: Working the same way for a stopview, a chronograph is a unique and worthwhile complexity that has the ability to measure the time deficit that has passed while the clock still retains traditional time capabilities. This crown controls the yanalog clock while the function pushers allows you to start, stop and rearrange chronograph subdials. Charonometer: High health watch that has been tested and verified status. Complexity: Any feature that is included in the clock does not indicate hours, minutes or seconds. Kausk certified charonometer: Refers to the time that charonometer is titled Charonometer at conducted by The Contravalli Offacall sas sas des Cheronometaris (Kausk), translated almost to the official Swiss Choronometer Testing Institute. Kausk is a micro-swiss government agency that is concerned with the accuracy and health of time pieces in Switzerland. Crown: This allows that part To harass the clock movement for a kind of purposes such as arranging hands, changing history, walking around its spring, etc. Crystal: Covers transparent on a clock face that gives the view of the dial. The Deploveant: Kind of catch your bitter or an unforgettable look for the leash. Double time zone: The clock together gives time in two times zones you want. Exhibition case or back: The unique complexity in which a crystal window is applicable behind a clock case, allows the clock movement approach. Function Pushers: Manual control for a movement when a motion increased that needs complications. Greenwich Means Time (GMT): Also called as the Meidian time of Greenwich, Greenwich Meidian Line is located at royal consultations in Greenwich, England. This is where all time the logic is met. Greenwich means that the average time that the earth is taking from noon to noon to roam is. In this regard, GMT is considered as the time of the world and once it was the basis with which each other zone is timed. Guallokhi: The characteristics of wavy or straight lines that give a unique effect when the style of the akirnan, the clock is moved or moved. Ionic Extitude: Action which is durable and scratch resistant that produces wear and tears. The makers use the zuer bering to reduce friction and help with delicate parts of the movement easily and with great health related. Help increase the life of the jewelry movement. Diamonds, sappaharas, yaadaand garnets are preferred materials. As a general rule, a large number of jewellery shows more sweetness movement. Logs: North and South or bitter that ends south of the case and often extends out of the dominant lines of the case. Lunar Phase: Lunar Tour has been based on the energy, time measurement study, after ancient days. Moon phase is a complication on a clock that shows which is visible through a aperture. Movement: Assembly principal elements and create a clock or clock mechanism; Includes roaming and setting mechanisms, scopymant spring movement. In quartz and digital watches, it can also refer to the amount of left energy in the battery. Push Button Dual-Dep That hidden push button continues to be bitter. This hold maintains an inefficient, smooth completion procedure. Reitter: Complex clock mechanism that take hours, quarterors or minutes, or re-presents them on request. Originally designed to help wear to tell time in the dark. Workman: Hour, Minute, Second or Calendar hand which walks on scale and resets to zero at the end of its cycle. Scletonasation: Shows the complex symphenomy of dynamic reuters, ink lidbits and spectacles that is the power of a clock. Open design presents an interior view, because unnecessary metal wear allows the structure to actually look. Swiss made: Since the 16th century, Switzerland has produced some of the industry's biggest technological development. The Swiss made a law swiss to put into effect for all time pieces of Baawang: first, the movement must be gathered in Switzerland. Second, the movement should be done in Switzerland. Finally, the carbox must conduct a final inspection of the clock in Switzerland. Tachimeter: Used to determine units per hour, such as average speed at the fixed distance, or speed-based distance; usually located along the outer edge of a dial. The tatyum: Contains small tubes with gas-to-the-top steam ingume and layer edit edifies which can be seen for several meters in the dark. The tatyum light needs no power of electricity but your watch must be charged by any light held close by. Now you keep it there, long and bright you will see Tritnite. Unidirectional Roaming Bezel: Used for informed time tracking. A shift mechanism prevents bezel from wandering back. It is popular with the feature, which depends on the feature of the past time to prevent the air running out of the air. The fact that wearing the bezel behind prevents time from being passed through indirestomatatang. About Stainless Steel: Also called The Sancancorn Resistant Steel, stainless steel is a steel blend with added iron and chromem. Metal morcha is resistant, durable and extremely lustrous. He has a similar appearance to platinam and polastus. Any snore which can be from day to day clothing can easily be bofaed away without the piece danger. Please note, however, if stainless steel is made with another metal, the climb is found too much against difficult surfaces that can wear. Stainless Steel was first recognized in France in 1821 metaling Pierre Berthier. Many discover a modern mix of stainless steel adulteration in the United States, Harry Brearley England. It was announced by the New York Times in January 1915, it was officially collected with its invention Modern metal. Invita's Sobagwa Collection: How low will you go? With expert engineering leading and ready to face ever-deeper, no Invecta or opportunity to ever handle would be great for Subawa. The sheer intensity of this powerful watch is spectacular with the stylish grade solid stainless steel, swiss automatic mobility and ionic extimating options of more than one color. With water management up to 500 meters, a unidirectional roaming bezel, integrated stroke resistance and invita's luminous Tritnite hands, Sobakhawa is the ultimate of the ocean or the earth to take a nap in any sahask conversation. Chronograph: Working the same way for a stopview, a chronograph is a unique and worthwhile complexity that has the ability to measure the time deficit that has passed while the function pushers allows you to start, stop and rearrange chronograph subdials. The different conditions of The Charonograph with a dispersion of stop, arrange and break the function. Quartz: Although the mechanical is not as complex as other engines, the quartz movement provides the most accurate and reliable time keeping. This type of movement usually gives power by a battery, a quartz is applicable to the crystal, the current is despersive and creates an exact resonance frequency. The seers employ frequency later to measure the time. Some adaptations to the quartz movement include introducing the need for a battery. Quartz movements have been used in time pieces since the 1970s and are extremely accurate, reliable and affordable. The case provides the basis for all other important watch components. It maintains logs for movement houses, bitter or patta attached, hosts of various crowns and function pushers, and crystal and bezel seats. Cases exist in a variety of sizes and sizes and use a library of materials to build stainless steel, gold, ceramic, titanium, plastic, and more. The case remains dominated by stainless steel in construction, however, the hepa-al-Barginak metals and materials, like the titanium, continue to gain popularity. Metal cases have often ended especially - such as smooth reflective polish or circular blurred brushwhich enhance the watch's presentation and give it unique depth. Some designs allow for a more comfortable fit of case and logs to watch. The back of a case will usually be removed and most likely Scroll down or pop off. It is important to note, however, it should only be opened by a trained professional. An exhibition feature (found behind a case) refers to an additional window that allows you to see the movement and is often found automatically and on pieces of mechanical time. Case size: Case measurement, 8:00 to 2:00 square a measure, 3:00 to 9:00 or 6:00 to 12:00 (should be the same) Itacar, Tono, Ool, M Get a better feel for the size of a watch case by comparing the case length to the two-measure, 3:00 to 9:00 and 6:00 : Exit: 21.21 mm Quarter: 24.26 mm Half Dollar: 30.61 mm Poker Chip (Quality): 39mm Ping-Pong Ball: 40mm Golf Ball: 42.67 mm Rear Ball Barrier (ISO Standard): 50mm Rockbowl: 57mm Soda can (Standard): 65mm Tennis Ball: 67mm 67mm
