Hp officejet pro x476dw mfp printhead

On this page you will find some of the most popular items we offer for hp OfficeJet Pro X476DW inkjet machine. If you don't see the item you want for HP OfficeJet Pro X476DW, contact us via email, online chat, or free phone, and we'll find the item you need for the HP OfficeJet Pro X476DW and at a very competitive price. Not all of the items we offer for HP OfficeJet Pro X476DW ink are listed on this website, but we can find almost everything you need. If you're looking for stock for HP OfficeJet Pro X476DW then don't worry. All items listed on this page have been confirmed by our technical team as compatible with this HP OfficeJet Pro X476DW. Any chance you can get to the press head? Maybe the cable is loose? Re-unseat? I have no experience with the printer model that you mentioned, but is there anything visually wrong with the print head? I thought print heads were part of printer cartridges on a wide printer. I'd start with the exchange of bullets. JoeMatuscak wrote: I thought the print heads were part of the cartridges on the page of a wide printer. I'd start with the exchange of bullets. I thought he was using printing rods instead of a print head. From watching a YouTube video about how to clean it, I think it's a print bar, but the error message says Print Head. It's not part of the tape, I don't see how to get to it without unscrewing and removing the paper mover. The printer locks and the control panel stops after a few minutes, or when you try to clear the error, I wonder if this electronics board problem. @glenn2688, thank you for your question and thanks to other IT professionals for their input. Even if you're out of warranty, contact HP Support at 800-474-6836 because this team should be able to resolve your issue. You will need to enter the serial number. I'll ping you with some more instructions. I cleaned the oversteer pan, but that didn't help. With the help Priscilla@HP, I sent them my printer information model and serial number a few days later the support called, ask if it worked at all and I said no, she said OK we'll have to replace it. Two days later, I got a refund, free of charge. Renews its belief in using HP printers! Thank you Priscilla and HP. Glenn, thank you. We appreciate your patience and cooperation. Your willingness to work with HP and your calm professionalism have made it easier to achieve a positive solution. Hello Icarimpo85, Welcome to HP Forums. Sorry, but to get your problem more exposure, I would suggest posting in commercial forums because it is a commercial product. You can click here for a link. on HP forums. I worked on behalf of HP. Page 2 I've been an engineer at HP for 8 years, management has and always will be scared to death to admit that any product can have a problem (comes from the fact that most managers already technical there). I was a loyal employee and still believe it's a good company with some problems with poor managers moving into the ranks. I tried to find someone internally who understands this problem and tells me what the cause was and communicate the solution (I think there is a solution, but it must be admitted that the problem is to provide a solution and the management is just too shy to do it). I will try my best to help and hopefully some people can communicate back to this chain if the suggestions work as I don't have access to many Pro Xs with this issue. It is very important that anyone who uses these printers understand the importance of using good ink compatible paper. Furthermore, just as important is to know how to remove and clean the waste ink/duplex tray – this can prevent semi-dry gooey ink from getting back on the print head (the print head can be wiped clean by throwing a guide just above the waste ink tank – I recommend using distilled water or flushing fluid and getting a folded paper towel very greased to wipe the print head with gental pressure back and repeat further). These two steps can recover from ink blur better than choosing a printer menu. It won't fix the reported problem, but I think it's all related. After you learn how to operate waste ink and print head surface, you need to learn how to access the service menu in order to run print head recovery. It sometimes restores dropped segments and runs repeat it may be all you need to know to recover dropped segments, but it's not always proven successful with some installations I've tried to help. I think the ink delivery system is prompted to give all prntheads primer (over time and under heavy load of print volume). Once the nozzles have been dropped it's not that easy to ink on the wet back through those nozzles so it can help. Find a strip of foam about 1/4 thick and about 1 wide about 9 long (long enough to contact the entire underside of the printbar). Wrap it with several layers of paper towel and moisten the surface, which will touch the surface of the print head with distilled water or better flushing liquid. It does a better job of what the sleg service inside the printer does, it is dry, help get the nozzles restored. If you do it right and leave it for a minute or so, you should see all 4 colors from each print head to paper towels after removal. If not the nozzles were not all back. Here's my most radical suggestion. Ink flows from the cartridges down to the print panel at the back of the printer. If the air trapped inside the Printbar is the main cause of dropped segments, and it is very possible, then placing the printer on it's back surface and running print head usage should pump some ink up to the bottom head up to the top head that is closest to the front of the printer. If the print head design is similar to the old HP 10/11/12/88/940 captured air just can't escape printbar if you do something like that. I just tried it once myself, and it certainly seemed to help recover the lost head near the back of the printer (it seems to have moved the air towards the upper head, which is the front head when back on the bottom surface). I'm investigating more advanced recovery processes that involve removing the back panel of the pirnter and manually pumping ink through the print head, but I'm hoping it's a last resort to take proper action. Page 3 Thanks. I'll keep your tips in mind. After looking at how much extra ink I have for this machine, I decided to order one more. I didn't even look at the flap you mentioned in the duplex unit. I'm thinking of ordering a replacement duplex kit so that after cleaning one, I can let it dry thoroughly and have no downtime with the printer. It sounds like if I clean every 5000 pages (every case of paper), I should be fine. I'll check the print quality of the report every few weeks too. I've been using 3rd party ink from SuppliesOutlet.com and hope it doesn't hurt printbar segments. Have you tried this continuous ink supply from Ekuten? pd_sbs_229_4?_encodin...I tried it too, and if I can keep things clean, it's a lot of ink for \$300. They sell one without ink for \$200, and I wonder if I can get things to work if it might be worth getting another one and filling flushing fluids instead of ink. I still think I could damage the print heads if I try to clean them with a cloth. So, I'll try your suggestions for a new one, and try to keep it going until I use the ink I left. If it's still strong, I'll order more ink, and if not, I'll look at a newer version that seems to have minor problems with. Due to the speed and quality of the prints, when it works, it's worth a little extra hassle. I'm just a home user who likes a really fast printer. Thanks for all your tips. Page 4 paxberg New Member 3 3 0 0 Report 31 of HP's 31 Flag Post Recommended Prnthead Recovery Helped A Lot. Every time I made this print better. Z6_M0I02JG0KGSS30ACT8MPG200G1 some tool features may not be available at this time. We apologize for these inconveniences and are addressing the issue.
