South american mountain ranges list

A mountain range is a group or chain of mountains that are close together. The mountain ranges are usually separated from other mountain ranges by ports and rivers. What is the highest mountain range in the world? The Himalayas are the highest mountain range in the world. What is the longest mountain range in the world? The Andean Mountains form the longest mountain range in the world. Well-known mountain ranges The Himalayas are the highest mountain range in the world. More than 30 peaks in the Himalayas are more than 24,000 feet/7315m high. The Himalayas, literally translated as 'Land of Snow', Where are the Himalayan mountains? The Himalayas are the great mountain system of Asia. They form a crescent 1,500 miles wide across northeastern Pakistan, northern India, southern Tibet, Nepal, Sikkim and Bhutan. The Himalayas is one of the youngest mountain ranges in the world. The Alps is a vast mountain system in south-central Europe. Around 13 million people live in the Alps in more than 6,000 communities. The Alps are one of the largest and tallest mountain ranges in the world, covering some 192,000 km² of land area, stretching more than 750 miles (1,200 km) from Austria and Slovenia to the east, through Italy, Switzerland, Liechtenstein and Germany to France to the west. The Alps include several hundred peaks and glaciers, including numerous peaks of more than 12,000 feet, with Mont Blanc highest at 5,771 feet. The Andes are the second highest mountain range in the world with many peaks climbing more than 20,000 feet. The Andes Mountains are the longest mountain range in the world. They extend 7,200 km (4,300 mi) from north to south, along the west coast of the continent. Where are the Andes? The Andes mountains are found in South America, current from north to south along the western coast of the continent. Click here to learn more The Rocky Mountains are a vast mountain system in western North America, stretching north-south from Canada to New Mexico, a distance of about 4800 km. The highest peak is Mount Elbert in Colorado, which lies 4,401 metres (13,000 ft) above sea level. Karakoram is a large mountain range in northeastern Pakistan and northern India, near the Border with China. It stretches 300 miles to the southeast and includes many of the world's highest peaks, and many of the world's longest glaciers. Some of the mountain ranges found on each Antarctic continent: Antarctic Peninsula, Transantarctic Mountains The highest mountain, the Vinson massif in the Ellsworth Mountains, peaks at 4897 m. Africa: Atlas, East African Highlands, Ethiopian Highlands Asia: Hindu Kush, Himalayas, Taurus, Elburz, Japanese

Note 2: Part of the Kush-Himalaya Hindu region All previous Asian ranges have been partly formed over the past 35 to 55 million years by the collision between the Indian Plate and the Eurasian plate. The Indian plate is still particularly mobile and these mountain ranges continue to increase in elevation each year and this page may need to be updated within a few years; of these, the Himalayas are increasing faster; Kashmir region north of the Indian subcontinent is the point of confluence of these surrounding the Tibetan plateau in two but three well four for prominence See list of peaks by prominence (classification of mountain ranges as well).
