6 components of health powerpoint

PowerPoint is the leading presentation software program. However, the software can be expensive and it is not the most feature of the rich market. We looked at several PowerPoint alternatives that are more cost-effective, easier to use, or include tools to generate more up-to-date presentations to identify the top six best competitive opportunities. Top 6 PowerPoint alternatives for small business owners As we evaluated alternatives to PowerPoint First of all, good alternatives to PowerPoint should allow businesses to make effective presentations with an easy-to-use set of tools to create, edit, and share slides. Alternatives should be more accessible than PowerPoint, offers unique features, or both. Apps should also give users control over how the slide show looks and works in transitions and animations. Criteria used to evaluate PowerPoint alternatives include: Cost – The total price of the platform would be available to most companies. Ease of use – Presentation apps must be easy to use and understand. Editing tools – An alternative should allow users to add custom text, visual effects, or colors to their presentations. Templates – PowerPoint alternatives must offer ready-made templates to users who don't want to create presentations from scratch. Interactivity Audience – We were looking for platforms that advertised audience feedback or allowed presenters to answer questions or offer surveys during presentations. Presenter Tools – We compared notes, pointers, and narrative options that help presentations be more effective. Based on the criteria above, we see that Google slides are the best choice for most small businesses looking for a PowerPoint alternative. It is free to use and has all the tools you need to make strong business presentations. It even allows your audience to ask you questions and give notes and virtual laser pointer to presenters. The best overall powerpoint alternative for small businesses: Google Slides Google Slides is part of a suite of enterprise business productivity and collaboration software that also includes documents, spreadsheets, and forms. Google slides are easy to use with a powerful set of tools that let you create presentations at your own discretion. Best of all, it comes free with a personal Google Account or comes bundled with a paid G Suite service. That's why Google slides are our best overall pick of small business PowerPoint alternatives thanks to its collaboration and customization tools. Google Slides Price Google Slides comes free with any personal Google Account, and also comes bundled with the G Suite platform for business email accounts that cost \$5 to \$10 per user per month. All apps we compared have a free version, but only slides offer all its features from the selected plan. Pricing plans include: Personal Google Accounts: Free with 15GB storage G Suite Basic: \$5 per par per month with 30GB of storage for G Suite Business: \$10 per user per month with unlimited storage, activity reporting, and retention policies for additional 100GB of storage is available for \$1.99 per month. Google's slides allow you to quickly and easily create and present slide shows with lots of templates to choose from. You can even import PPT files so you can work with existing PowerPoint files if necessary. It also allows real-time collaboration, making it great for teams working on important presentations together. The Google Slide Interface edit tool is likely to remind you of PowerPoint and contains a tool for creating slides, formatting text, and inserting animations into slides. Like PowerPoint, you can convert data from Excel and Google Spreadsheets to graphics, and insert pictures and videos from almost any major file type. Google Slides, however, does not offer the flashy animations offered by the Prezi or automatic slideshow creation of Slidebean, but it has the same basic features, such as fade transitions and fly-in animations. Its editing tools are also basic, but good enough to create a slideshow that looks professional and aesthetically pleasing, while equipping teams of any size looking for low-cost alternatives to PowerPoint needs. Google slide templates are used by all types of users, so you can create your own slides from scratch or choose from 26 templates. You could use them for business purposes and simply edit them as you see fit. You can also use designs from third-party sites like SlidesCarnival, which offers hundreds of free templates with amazing designs. The template selection is small, especially compared to PowerPoint, which has more than 100 designs to choose from. Canva also has a wide range of templates over 50,000. However, Google's slides are good for any team that is either satisfied with a small set of basic templates, or there is nothing that performs some third-party template searches. Presenter Tools Slides are apps for iOS and Android that let you use your phone as a remote control to control presentations when your PC is connected to a TV or projector. You cannot do this in PowerPoint without receiving a third-party application. It also offers presenter tools, such as private notes, an index that lets you highlight items on the screen, and a basic Q&A tool that lets your audience navigate to a URL on their device and ask questions to presenters. This is a pretty powerful set of driver tools compared to other alternatives. Canva offers presenter notes, but no pointer or Q&A; a chance. Unfortunately, Google's slides lack audience behavioral analysis features found more robustly in alternative plans and the ability to submit surveys and such as a swipe. However, it is still a great free option for any team that wants to interactivity with their own and save notes in your presentations. Collaboration features Like all Google Enterprise apps, team members can be recorded in one slide presentation, make corrections, and comment on slides. You can set permissions on who can view, comment, or edit your content. However, collaboration goes beyond the slide base because teams can then collaborate in linked Google spreadsheets or other embedded documents. This is a great opportunity for teams working together and wanting to update your presentation data in real time. Google Slide Presentation Templates What Google Slides Lacks Google Slides offers many features to create honored looking presentations. With that said, your presentation will be very similar to the PowerPoint slideshow people have been seeing for decades. If you want something a little more striking, Prezi uses a whiteboard-based design that provides content featuring dramatic zoom and rotation. What users think of Google Slides Users is very impressed by how useful Google Slides are, especially as a free tool. Collaboration features are especially fond of remote commands, and most customers believe that the platform is incredibly easy to use. There are complaints about some features that stop when Google issues platform updates, but these customers have also noted that the company quickly fixes problems. We use Google slides and prefer using PowerPoint to create our presentations. We find the user interface very simple to use and intuitive. This ultimately helps to create presentations much faster. - Amit Roznak, head of ecommerce, AdScale Best PowerPoint Alternative to Automatic Presentations: Slidebean Slidebean is one of the newest PowerPoint alternatives to market entry. Starting at \$24 per user per month, Slidebean will automatically create and format the presentation you get once you have entered your text and images. The improved version even offers analysis. The quality of these slideshows is high and they offer an aesthetically pleasing look. This is our pick of companies that want automated help to create distinguished and visually arrest presentations. Slidebean Prices you can start creating Slidebean presentations for free, but you will have to pay to share your presentations with others. Plans cost either \$96 per year for the Starter Edition or \$228 per year for the Premium version. Slidebean is an expensive and only platform we watched that does not offer free edition, Slidebean Features Starter Edition allows you to access a basic set of slide-building tools. You can collaborate on projects with your team mates, present content online, and access the enterprise's basic peer-generated template library. PowerPoint bore offers the following community-generated content. Then just add your own text and images and apply Slidebean to the presentation layout Like the free version of Canva, this level forces you to choose from the company's limited color palette, and could be frustrating for design savvy users. This makes the start plan the best for teams who want to create professional-looking slide shows online, but don't need granular control over how content is displayed. Premium Premium version gives you analytics, the ability to add your own brand and fonts to presentations, as well as access to the company Premium Content Templates, which is the curator of the company itself. Priority support services are also received when you need help with a platform that PowerPoint doesn't offer. It doesn't offer a service uptime contract like the Prezi top-level version, however, and it also doesn't allow you to ask questions about your audience in real time. Therefore, this version of the platform is best suited for teams who want to gather audience insights from their presentation software in addition to the fact that the content of their presentations is presented to them. Slidebean Presentation Creator What Slidebean Lacks It's impressive that Slidebean can create slideshows for you, but most presentations don't look much more advanced than anything you could create on Google Slides yourself. If you would rather spend time inserting animations and transitions for yourself, then you may want to consider Google's product instead. What users think of Slidebean Users love the ability to enter content and have a presentation built around their own text and images. They also rave about presentation aesthetics that can make even the smallest companies look like today's hottest, hippest startups. However, there are complaints about frequent bugs and system hiccups. The best PowerPoint alternative to audience insight: Swipe is a slide show platform with design focus on audience feedback; it's a free plan as well as paid plans starting from \$15 per month. In addition to content and transition editors, swipe allows you to administer social surveys during a presentation and track engagement activity, which shows when, where and how the presentation was viewed, and how long the audience has viewed each slide. Pull is good for companies that want to collect audience data and read insights. Swipe Price Swipe free version allows you to make up to five presentations with unlimited users. Paid plans range from \$15 per month for unlimited users of the Pro plan to \$36 per user per month for a business plan. This puts it under other presentation software in terms of availability. Swipe Tiered Features Free Free Version gives you access to all Swipe building tools, but limits you to just five presentations. It also doesn't give you analytics or the ability to protect sensitive information with passwords, but you can insert audience feedback modules into your surveys. Users then respond to surveys by clicking responses, a feature that is supported in both live and recorded versions of the presentation. It is currently not possible to survey your audience directly in PowerPoint without using a third-party plug-in. This makes the popular app look archaic compared to Swipe. This platform edition is good for companies that just want to try swipe on themselves and upgrade to a pay plan later. Pro For \$15 a month, the Pro edition offers unlimited presentations, analytics, and privacy arrangements for your presentations. PowerPoint also offers analysis but doesn't offer online surveys in any capacity, which means you'll need to use other software to manage audience surveys after your presentation. Despite its feature set, this version is significantly more expensive than the monthly cost of either the Starter version of Slidebean or Haiku Deck Pro. It also lacks the choice of templates found on other solutions. Therefore, this platform is most suitable for companies that want a presentation tool designed to interact with your audience. Team Team edition is \$3 more per month, putting the cost at \$18 per month. However, the only major difference between this and the Pro plan is it adds priority support. This means that by contacting the company for help, you contact a representative before customers who subscribe to fewer levels or services. PowerPoint doesn't provide a similar support option, but unless you have persistent problems with the platform, you may not need this service level. Business This top-level version of the software adds visitor insight that gives you information about how long users viewed each of your slides, as well as what time they looked at your content. You can use this information to let your team know what customers and partners find more interesting about your presentations. It also offers CRM integration that connects data from these insights to platforms like Zoho and Salesforce. At \$36 per user per month, it's the most expensive tool we looked at. This could make it unavailable for some smaller teams. Nevertheless, it might be ideal for companies that want to gather a wealth of insights from their presentations and automatically export this information to their CRM. Pull interactive presentations What Swipe is The Missing Swipe stands out offering an interactive audience for social surveys. However, if you don't need them, swipe slide-building tools aren't nearly as stable as the other services we've been watching. Google slides also offer a wider range of templates to choose from, as well as the ability to configure more options for slide behavior and design. What users think of Swipe professionals who provide informative seminars and other types of live audience surveys during swing. Users also report that the platform is incredibly easy to use. With that said, users believe that getting used to the interface doesn't take some time. Best PowerPoint Alternative for Mobile iOS: Haiku Deck Haiku Deck is probably the best presentation software out there for editing on your iPhone or iPad as PowerPoint alternatives go. Although there is no Android version, it boasts the best mobile app of all the platforms we looked at. It even comes with an AI helper that can automatically insert pictures and formatting. This makes Haiku Deck ideal for iOS users who want to create presentations on the go. Haiku Deck Price Haiku Deck free basic version allows you to create one presentation. Paid plans start as low as \$9.99 per month for the Pro version and go all the way to the \$29.99 per month Premium version. This makes it one of the most accessible options we compared. Haiku Deck Features Basic Haiku Deck free Basic version allows you to start creating presentations on your desktop or mobile device. However, this is more of a pilot program than a genuine, free plan, as you only have to give one presentation, but serves as a good way to familiarize yourself with the Haiku Deck interface and its main set of features. This entry-level package is very simple and there are no privacy controls on your slides. As a result, you won't find features like custom branding or the ability to embed videos in the same way as in PowerPoint, but you can still use the mobile app. All told, this version is not meant for serious business purposes. The Pro Pro version offers a second-time established company, such as a custom brand, that lacks a similar priced Starter version of Slidebean. It also comes with AI help from the company Zuru assistant. This feature can automatically add images and suggest formats based on your text. For comparison, PowerPoint bore the following AI help. Haiku Deck Pro doesn't include features to collect audience feedback, such as Google Slides, or online election features like Swipe, either. At \$9.99 a month, the Pro version is ideal for Mac users who want to try unproven technology and be a leader in slideshow building. Premium Haiku Deck Premium gives you priority support, as do the most expensive versions of The Pres and Swipe. It also offers analysis features that indicate the time and location of users who view your slides for a fee of \$29.99 per month. Although it is more expensive than PowerPoint, these features make haiku deck feel like a more modern solution. However, Haiku Deck Premium still lacks audience feedback collection features that other platforms do. It also lacks a large library of templates to choose from, such as Slidebean. That said, if you want to better understand your audience's viewing behavior, Premium and Given. Haiku Deck Image Library What Haiku Deck lacks Haiku Deck iOS apps are intuitive and full of featured presentation tools. It's unfortunate then that there is no Android version of Haiku Deck. Most other systems we looked at at least offer a presentation viewer for Android. Google's slide mobile version may not be as sleek as the Haiku deck, but it works on all major platforms and might be better suited for those who want to make presentations on an Android device. What users think of Haiku Deck's Haiku Deck customers find a system that is easy to use and very simple. The image library that comes with the free version allows even tech-illiterate users to build attractive slideshows. However, there are some complaints about the lack of adaptation. Best PowerPoint Alternative to Sales & Marketing Presentations: Canva Canva is a design program that provides tools to create not only presentations, but also infographics, posters, and almost any other form of sales collateral you want to take as a vacation behind your back. The service, which offers a free version, has all the basic presentation options, as well as collaboration features and a library of affordable stock images. Canva is great for sales teams who want a one-stop shop to create presentations as well as other marketing materials. Canva Prices Free version of Canva provides 1GB of online storage for your content. The Work Package in Canva costs \$12.95 per user per month, which makes Canva one of the more expensive services that we looked at. You will be in touch with the Canva sales team on offer for enterprise edition. Canva Tiered Features Free functionality at the entry level. The Free version is limited, which is something of an industry standard presentation software. With that said, you still have access to all of Canva's 8,000 templates, which is much more than what PowerPoint offers. One GB data is also minimal compared to the 15GB offered with each free Google Account. It could be a good try out platform, or simply one-off projects that don't require advanced features such as custom resizing or access to paid stock photos, making it a great option for individuals who want to use their images for presentations. Canva for Canva only provides for everything your business needs to do professional business content, such as support for external fonts, custom resizing, and access to any stock photo in the Canva library for just \$1. There are images to suit virtually any possible business use event, with more being added every day. For comparison, PowerPoint offers only a small library of subpart illustrations. Canva's work package lacks feedback features for viewers from other systems. Its collaboration tools are limited internal teams that want to work together to or marketing materials. Still, Canva is a great all-in-one design platform to create effective security. If you want an easy-to-use tool that allows you to heavily customize your presentations, then this version of Canva is worth. Canva for Enterprise As its name suggests, Canva for Enterprise is designed for larger organizations. You'll need to contact your sales team to determine your bidding, but a dedicated account manager is available at this level, as well as administrative controls that let you set permissions that employees have access to what features. It also has a 99.999% uptime guarantee. PowerPoint bore offers the following uptime guarantee. Canva for Enterprise does not offer specific prices like other platforms, which can be confusing for many customers. It is also difficult to recommend to those who want to gather insights from the audience. However, it is well suited for those who want a committed account manager to see their needs using the product. Canva Presentation Template What Canva lacks Canva's main benefit is that it allows you to create other pieces of content such as ads and social media graphics without having to use another tool. Its presentation maker is relevant, but it doesn't offer animations and fonts that look as good as Slidebean and Google Slides. If you don't need to make sales security, these systems are a better choice. What users think of Canva Our readers say that the range of templates makes it easy to make a professional-looking design without a seasoned designer. On the other hand, there are complaints that searching using templates is tedious and that navigating through the library of stock images can be slow. The best PowerPoint alternative to highly focused presentations: Prezi Prezi, which offers a free version, is a PowerPoint alternative that uses an unconventional approach to a common presentation. Instead of using slides that are made in order from start to finish, Prezi uses one very large canvas, which the presenter can then move around, zoom in and out. The software is great for companies that want to quickly change the focus of the presentation or emphasize the main point on the fly. Prezi Prices You can use Prezi for free, but the repository is limited to 100MB and your content is visible to all other Prezi users in their public gallery. Prices range from Enjoy version \$7 to \$59 per month. Prices correspond to other services we compare. Prezi Tiered features Public Public, and the free edition of Prezi allows you to create and share presentations just like you do with PowerPoint. You can type, format text, and insert pictures as you see in your presentation. Animations can also be configured between slides. However, unlike other presentation tools, the software is designed to let you out or quickly between the content with ease, instead of forcing you to scroll through a stack of unnecessary slides. Like most other PowerPoint alternatives, Prezi's Public edition limits you to just 100MB of online storage. It also makes all your content in the public gallery for everyone to see. It's not suitable for most business use cases, but it might be worth it as a free option for putting together very basic presentations with insensitive information. Enjoy \$7 a month, you can keep your Prezi content private and access it on either the iOS or Android app. You also receive priority support if you need business help that's better than what PowerPoint offers. This edition is at a lower price than similar offers, except for Google Slides. However, unlike Google slides, you can't crop or tap pictures in the app. To get this option, you'll need to upgrade to a Pro plan or higher. Prezi Enjoy is good for small teams who want a core set of presentation-making features that they can use to create truly unique and audience-customized presentations, and those who can edit images in another program. Pro For \$19 a month, Prezi comes with unlimited storage and the ability to work on projects offline. This makes it similar to PowerPoint, which allows you to store as much media as your machine can handle. You can also access the image editing tools so you can tap graphics before you insert pictures into your presentation. Unlike the Slidebean Premium version, it does not have analysis features or external font support. It also lacks access to libraries to share images such as those with Canva. However, if your team finds itself making presentations with lots of graphics, then it's worth checking out. Pro Plus Pro Plus is designed for larger teams and adds in-depth, hands-on training from the company when you registered. Prezi employees will personally walk around the team members using the functions of the system. You will not receive this option from Microsoft to learn PowerPoint. Prezi Pro Plus is one of the most expensive packages we looked at, and it still lacks things like the ability to gather audience feedback. Still, it's a very strong proposition. If you want to keep yourself in trouble teaching all your employees how to use the software, you will probably appreciate Pro Plus. Prezi Flexible presentation What prezi lacks in the right hands, Prezi presentation can look fantastic. Unless you have a keen eye for design, however, it is difficult to make a Prezi that doesn't look cluttered and absurd. If you don't have the skills or care to use Prezi's nonlinear design than Google Slide conventional. PowerPoint is a better solid. What users think of Prezi Prezi users who are designers with marketing love Prezi and the fact that it allows them to perform that exceeds the total total Regular business users, however, find a builder to spiral and say it's hard to make good presentations. Bottom Line Over the years, PowerPoint has been matched with cheaper, sometimes even free offerings, allowing you to make powerful presentations. The fact that these systems are all cloud-based is also a bonus as you can create and edit content on any device. Google slides are free to use, very intuitive, and have all the editing options you need to create an effective presentation. Its real-time collaboration features and presenter tools are very useful, and the fact that you can import templates from a third-party service makes it the best PowerPoint alternative on the market today.
