If you wish a specific feature, maybe there is an addition to it. The interface is extremely needed, so you can shave things back and need more than one Windows and toolbar. For this reason, GIMP is the same as the parked learning workman Photoshop, but once you've made your way through a few lessons, it's very comfortable and calm. In our experience, GIMP was a little less responsible and used a little more resources than its owned counterpart, but it can easily be forgiven on the basis that GIMP has always been and will always be free and open source.
