To ensure that your GLOCK pistol works reliably, you should clean and lubricate it regularly. Please refer to the operating instructions for the correct lubrication points as well as the required lubrication quantities. Your GLOCK pistol should be cleaned and lubricated: if it is completely new before it is fired for the first time, after each time it is fired at least once a month if it was not used during this time, when it was exposed to rain, snow, sweat, salt water, dirt, dust, etc. If you use your GLOCK pistol very heavily, we recommend that you have it checked regularly. A GLOCK-certified armor tank near you. If your GLOCK needs to be replaced by a certified GLOCK tank. Proper cleaning and lubrication prevents corrosion and removes accumulated dirt and dirt that can interfere with the operation of your gun. Check the manual of your GLOCK model where you are applying lubricants and how much you are applying. NOTE: The correct amount of lubrication is crucial. Too much lubrication can affect the performance of the gun. Each time you clean your GLOCK pistol, it should be field-striped (disassembled into its main components). If you maintain your GLOCK properly throughout your ownership, it is in perfect condition to pass over generations. Many firearms are passed on from generation, but it is important to know what the laws are in their state when it comes to passing on these items. Safe storage at home is an important part of the responsibility for gun owners. GLOCK. (Photo: Jacki Billings/Guns.com) Removing and cleaning a Glock can seem like a daunting task, but with the right tools and a little expertise, the process takes less than 15 minutes. Crawling the user manual is a bit on the boring side and sometimes doesn't take you where you need to go, which is why Guns.com's here to help. We have broken the process step by step to ensure that you get the cleanest Glock on the block. Fortunately, all Glocks break in the same way, so no matter which model you're athletic, you can follow along with these procedures. First, we need to lay out our tools to get the job done. Steps to clean a Glock tools You need cleaning mat or to Gun Cleaner (Brand Doesn't Matter As Long As It's Made for Gun Cleaning) Gun Oil (Again, The Brand Doesn't Matter, But Keep With Oil Specifically for Guns) Now That We've Assembled Our Tools and Our Gun Mat Rolled Out, Let's Go In. (Photo: Jacki Billings/Guns.com) The first step in cleaning area for the rest of the cleaning process. Remove the magazine and lock the Glock film backwards, throwing any live ammunition out of the chamber. Empty the magazine and remove all ammunition from the room. When the slide is locked back, visually check several times whether the weapon is unloaded and there is no ammunition in the chamber or magwell. 2. Takedown the Glock (Photo: Jacki Billings/Guns.com) Once it's absolutely certain that the Glock is unloaded and freed from any ammunition, let the slide down. To shoot a Glock, you must first pull the trigger, so it is imperative to be absolutely sure that there is no ammunition in or near the firearm. Since we have correctly cleared the Glock in a safe direction. Pull the trigger. Move the non-dominant hand to the back of the slide and pull back slightly on the slide. At the same time, use the dominant hand to grab the takedown buttons on both sides of the Glock forward and up to the guide rod to release and remove it. Then pull the barrel up and out of the slide. At this point, we have the four main components of a field-striped Glock in front of us - frame, guide rod, barrel up and out of the slide. At this point, we have the four main components of a field-striped Glock in front of us - frame, guide rod, barrel up and out of the slide. At this point, we have the four main components of a field-striped Glock in front of us - frame, guide rod, barrel up and out of the slide. At this point, we have the four main components of a field-striped Glock in front of us - frame, guide rod, barrel up and out of the slide. At this point, we have the four main components of a field-striped Glock in front of us - frame, guide rod, barrel up and out of the slide. cleaning process with the guide rod. It is easiest to clean, just wipe with the rag. If there is persistent gunk, a nylon bristle brush (Photo: Jacki Billings/Guns.com) The barrel sees a lot of action and therefore accumulates. Start by wetting a cleaning plaster with gun cleaner. Thread it through a cleaning rod. (Alternatively, you can use a drill snake instead of a cleaning rod.) If you are working from the end of the chamber, move the dirty patch and replace it with a clean, dry one. Guide it back through the barrel. If it comes back in black, give it another pass with a moistened cleaning patch and then go back with a dry one. Do this until the dry patch comes clean. If you need to use a nylon bristle brush in a cleaning cloth to release some stubborn carbon build-up, you feel free to do so. Give it another pass with a dry cleaning patch. Before we put the barrel aside, this is a good opportunity to check for errors. Look for bulges or cracks in the barrel is clean and we have checked that it looks free and free of bulges or cracks, set it aside. 6. Cleaning the slide tools: cleaning patches, gun cleaner, dry rag, nylon bristle brush (Photo: Jacki Billings/Guns.com) When tackling the slide, remember that the rails see the most action so focus your efforts here. Use a combination of cleaning patches and a nylon bristle brush to clean the area around the rails. Wrap a cleaning patch around the brush, scrub the rails, loosen structure. Put a clean patch on the rails to confirm that it is free of dirt. Tilt the sled so that the snout is facing down. Brush the crushing face with the bristle brush. Once completed, remove a dry cleaning patch and wipe the area. This is also a good opportunity to look for bulges or cracks in the metal. If you notice any abnormalities, contact a gunsmith. 7. Cleaning the frame tools: cleaning patches, gun cleaner, dry rag, nylon bristle brush (Photo: Jacki Billings/Guns.com) Once the slide is clean, move on the frame. Here, too, we focus on the frame for dirty areas and wipe with a rag if necessary. 8. Lubricate it tools: cleaning plaster, gun oil (Photo: Jacki Billings/Guns.com) Now that the Glock has been cleaned, it's time to lubricate. A good rule of thumb here is to lubricant, so we jump to the barrel. Add a little cannon oil to a cleaning patch, thread it through the barrel a few swipes to suck excess. From there, take a cleaning patch with a small lubricant and the exterior. Follow this with a dry cleaning patch to soak up the excess. (Photo: Jacki Billings/Guns.com) Go on the slide, give special attention to the rails, spread a drop of lubrication down the entire area. Use a dry patch, wipe any excess. (Photo: Jacki Billings/Guns.com) On the frame, spread a drop of lubrication on the rails and use a dry patch to erase the area of excess lubricant. Also, add a drop of lubricant that touches the trigger bar. Touched. Connection to the right back of the frame. You have guessed it, wipe the excess with a dry cleaning patches (Photo: Jacki Billings/Guns.com) Let the barrel back into the slide, followed by the guide rod. Align the slide with the rails and slowly move the slide backwards, completely turning on the slide lock. Go ahead and rack the Glock several times to make sure it moves correctly. Wipe off excess qun oil that might appear. (Photo: Jacki Billings/Guns.com) Perform a trigger function test by first ensuring that the action is clear and that the weapon is directed in a safe direction. Pull the trigger. Drive the slide, and then test trigger security on the trigger security on the trigger. Press the side of the trigger, be careful not to press the security on the trigger should not be trigger should not be trigger. The trigger should not be trigger security on the trigger. Press the side of the trigger. The trigger should not be trigger. The trigger should not be trigger should not be trigger. Press the side of the trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger should not be trigger. The trigger should not be trigger should not be trigger.
