## How to draw trains easy

The newer and slimmer trains are a lot of fun to draw, and still start with simple shapes. You may be inspired by the well-known Amtrak cars, or even high-speed trains that exist in other countries. TIP: Take advantage of the space you have above and below in your train drawing. Adding some major landscaping in the foreground, and less in the background, will add some depth and space to your art. MATERIALS \*The above product links are references. If you click through and snâ j kr. DIRECTIONS The time required: 1 hour. How to draw a train Draw two rectangles for the cars. Add the front of the train. Add the train car doors. Draw a series of windows. Add lines and connect the cars. Add the rails. Connect trains to rails with lots of wheels. Add landscaping to the foreground and background. Track with a marker and color. Easy, step by step Took drawing tutorial Click HERE to save the tutorial for Pinterest! Railway lines called lanes were invented as far back as 1500. However, it was not until the 1820s that mechanical trains were invented. These trains were powered by steam and were a like in design for the train featured in this drawing tutorial. Many other types of trains have since been invented, including underground subway trains powered by electrified rails, and the futuristic Maglev train that uses magnetic repulsion to hover over its tracks. Fictional trains are often given charming personalities. A few of the most famous cartoon trains include the Thomas Tank Engine and The Little Engine That Could. Scroll down to get a downloadable PDF of this tutorial. Can you draw a comic book train? Keep a positive attitude as the little engine - I think I can, I think I can ... - and use this easy, step-by-step drawing tutorial. All you need is a pencil and a piece of paper. Each step of this drawing guide displays new lines to add in blue. You may want to have an eraser handy for removing guidelines and correcting errors. You can use crayons, markers, colored pencils, paint, or other supplies you might need to color your finished train. If you liked this tutorial, see also the following drawing guides: Soccer Ball, Sword, and Robot. Unlock UP AD FREE and printable drawing and coloring tutorials! Learn step-by-step instructions for drawing a train drawing - step 1 Begin by drawing an oval. This will be your starting point on the front of the engine. Took drawing - step 2 Expand straight, parallel, horizontal lines from the top and bottom of the oval, forming a cylinder shape. Took drawing - step 3 Enclose the cylinder using a curved line. Took drawing - step 4 Draw an arc around the cylinder. The arc shall consist of two straight, parallel, vertical lines, connected at the top of a curved line. Train drawing - step 5 Expand two straight lines from Arch. Connect them using a curved line, enclosing another cylinder shape. Expand the bottom line past the cylinder, and draw a short, straight line below it, meeting at a right angle. Train drawing - step 6 Draw the cab of the train. Start by drawing three straight vertical lines. Draw a small curved line and a short, straight line at the top of the outer lines. The lines are then connected using straight lines and form a three-dimensional shape. Took drawing - step 7 Finish the bottom of the shape using two long, narrow rectangles. Took drawing - step 8 Draw a smaller arc within the previous arc. Then draw a curved line over the top of the smaller arc. Took drawing - step 9 Inside the original oval, draw an oval in an oval. Then draw a star inside the inner oval. Took drawing - step 10 Draw a series of circles under the train to form the wheels. Then draw a curve on one side of each wheel to give the wheels depth. Took drawing - step 11 Draw the hub of each wheel using a small circle in a circle. Took drawing - step 12 Draw cow catcher, or safety grate, on the front of the train. Start by drawing a diagonal, almost upside down. Enclose three sides of the Pentagon with narrow rectangles. Draw a triangle in a triangle between the first and second wheels. Took drawing - step 13 Delete any guidance lines. Draw a smaller pentagon within the previous one, and detailed the grate using straight, parallel lines. Behind the grate, three parallel lines are drawn. Draw vertical lines between the lower and middle lines. Took drawing - step 14 Draw the wheels on the other side of the train between the grate and the first and second wheels. Don't forget the curve that adds depth and the circular hub caps. Took drawing - step 15 Draw the smoke stack on top of the large cylinder. Expand short parallel lines upwards. From the parallel lines, draw diagonal lines, and then another set of parallel lines. Connect the lines using a curved line and add details by crossing curved lines across the smoke stack. Train drawing - step 16 Draw straight lines parallel to the roof of the cab. Draw rectangles on the front and side of the cab to form the windows. Then drag vertical lines through the windows. Took drawing - step 17 Detail the front of the train. Draw a curved rectangle on the large cylinder and cross it with a set of diagonal lines. On the small cylinder, enclose a shape using a curved line. Took drawing - step 18 Draw the track under the train using three parallel lines. The nearest lines make up one side of the track. Draw lines between the top and middle lines to form the cross-ties. Took drawing - step 19 Enclose a shape over the smoke stack using many curved lines. This cloud-like shape is the steam or smoke created by the train's engine. Took drawing - step 20 Color your train. Drawing an entire train is a three-in-one tutorial – one for the locomotive, one for the coal car and one for the passenger car. As usual, the basic sketches are simple circles and rectangles. The trick to drawing a train that looks really awesome is to add the many small details. In the following steps, we draw each part of the train separately, carriage with carriage, to make the pictures fit neatly into the web page. For you to draw the entire train, you will have a paper that is set in the landscape direction. Draw a long flat line near the bottom – it will be the railway line where all carriages and motor will sit. Then you can select a simple rectangle for each of the engine and wagons, to have guidelines for pulling in. But enough talk, let's have some fun drawing an old timey steam train! Drawing a cartoon train: some fun facts before you start sketching! The first trains carried only goods. It is around 1820-30 that passengers were invited to use the train for their personal use. A French train (TGV) accelerated to a very impressive speed of 350mph. An Australian managed to haul over 680 cars (for a total length of 7.4 km!). Step 1 This guide will help you learn how to draw a cartoon train using some very basic forms. The train is made of the locomotive (2) that pulls the wagons (3). The train is moving on rails (4). This toy train is based on an old model that uses steam as the main energy source. But today, trains use electricity or diesel to help them reach some very impressive speed! Step 2 The shape of our train is mostly made of rectangles and squares. The wheels are made using circles. Only the chimney is made using a triangle. As you can see, this train is not very complicated to draw, as all shapes are basic and unchanged. It is more a matter of placing them in the right place using precise proportions. Look, it's a real challenge! Step 3 Let's try to draw the most basic train possible! First, draw two rectangles to form the body of the locomotive. Then you can add the wheels by sketching two small circles at the front and one larger on the back. Next, you can work more on the body of the locomotive by drawing a window and by adding a roof using rectangles. You can also join the two wheels in front by adding a small rectangle. Finally, add the chimney (and all the details on top of the locomotive). You can also add colors to make everything more visually attractive! Step 4 This tutorial just help you learn how to draw a simple old train using some very basic forms. But you can also outline a train using a different perspective (3) or one using a new technology (1). Just use your creativity and have fun! Go back to Drawing cartoon cars and other vehiclesGo back from How to draw a cartoon train website Draw more cute illustrations in minutes today! Would you like to learn how to draw more cute cartoon cartoon fast and easy? Using 23 cool printable resources, you can now enjoy tons of tutorials featuring fun animals, characters, food, objects, plants, vehicles, sports and locations. Everything you need to learn how to draw in minutes can be found in this special collection filled with more than 2200+ pages and 3600+ easy exercises. Read more here! Create unlimited products & copies using cute illustrations! Do you like pictures from this site? Good news! You can now get your hands on more than 1700+ cute illustrations to help you create anything you want. Enjoy a wide range of cartoon animals and characters available in different styles and designs. Everything you need to succeed can be found in this incredible collection. Don't miss the opportunity to own cute (and cheap) photos today! See all pictures here! 1 Draw a cylinder for the steam engine. 2 Draw a trapeze and a rectangle under it to the cab. 3 Draw three rectangles on top of the steam engine. Draw a funnel on top of the rectangle at the far left. 4 Draw two triangles side by side under the steam engine to the front of the train. 5 Draw a rectangle and a square under the steam engine. 6 Draw ovals of different sizes to make the reels. Draw the largest ovals in the rear of the train. 7 Draw a series of lines in the reels. 8 Based on the contours, draw the main part of the train. 9 Draw the details of the train and draw horizontal lines under the train to make the railroad. 10 Delete unnecessary outlines. 11 Color your train. 1 Draw two rectangles, one larger than the other. 2 Draw lines to connect the edges of both rectangles to the front of the train. 3 Draw two lines from the large rectangle to the edge of the paper to make your train very far for the body. 4 Draw a set of lines for the train's front and side faces. 5 Draw a set of trapezes for the train's wheels and headlights. 6 Draw a series of lines on top of the antenna's train. 7 Draw the train based on the contours. 8 Draw details like windows, stripes, wheels and lights. 9 Delete unnecessary outlines. 10 Draw lines in front of the train to make the railway. 11 Color your train. 1 Draw a triangle and rectangle. Draw a border around these shapes to figure out the shape of a bullet. 2 Draw a different rectangle next to the shape you made earlier. You can add as many rectangles as you want, depending on how long you want the bullet train is. 3 Draw small rectangles at the bottom of the bullet train. Place these rectangles on the area where you imagine the wheels to be in. 4 Add small circles to the reels. 5 Draw the train doors using upright rectangles and the windows using squares. 6 Add contours to the design to help you add color to the train. You can be very creative in the design you choose, this example uses lines for design. 7 Color the train as desired. 1 Sketch a the outline of the train using rectangles and squares. 2 Add the wheels using circles, making the third wheel bigger than the rest. 3 Delete the lines in the center of each circle and add windows using squares. 4 Add details to the reels by drawing smaller circles inside each wheel. 5 Add details to the bumper of the train using basic shapes like triangles and squares. 6 Draw the train roof. 7 Add design to the train's body. 8 Color the train. Add new question Question How do I draw a realistic train? Start by tracking photos of trains. Think of the components such as train carriages and wheels. Sketch shapes that look like your tracked drawing and replicate it without tracking. Question Can I use a ruler to draw it? Yes. You can use any material you want. Question How do I draw passengers on my train? I would suggest drawing the classic cartoon train in method 4, so simply to draw faces in the train's windows. Question Should I put smoke coming from the funnel? If you want to, that would be fine. Many older trains had smoke coming out of them, so it would be correct to draw this.
