# Discord won't launch on iphone

If you already know about Discord long enough, you can remember the old times when it was just chat for players. Now, everyone is welcome at the gates of discord's dark mode domain! That is, if you can open the application. Well, that's a little unfortunate, isn't it? First, don't worry. Discord is one of my favorite apps, and I'm sure it would be one of yours if I wasn't giving you this problem. With my trusty keyboard, WordPress, and my arsenal of troubleshooting knowledge, I'll help you figure out what to do when Discord doesn't open! I've been using the Discord app since it was first launched in 2015. This isn't exactly an IT technician certificate, but the good news is you don't need to be certified at all to make Discord work again! I'll show you how to open Discord so you can go back to talking to your friends and hanging out with Wumpus. Why discord may not be working I say it can because this kind of problem has a lot of different causes, and I mean a lot. At least I'll name some of the most common reasons. There may be a software flaw in your operating system (Windows, MacOS, iOS, Android) that is preventing you from opening apps. If you don't have enough RAM, discord may take a long time to open or it may run very slowly. Something in discord's program files may be corrupted. This is usually accompanied by an error message. Your computer hates you. Okay, just playing on the last one. Although, it certainly seems that my computer hates me from time to time. Because system failures can ruin your day (sometimes) Sometimes our devices fail at the system level. If you've had your computer, Android phone or iPhone freezing on you from time to time, this may be the cause of that. You may be responsible for Discord not opening. Usually these can be fixed with a quick reboot, and usually don't happen very often unless there's something else wrong with your device. If Discord doesn't open, try restarting your device first. You know, all turn it off and call again. Discord: The RAM-Hogging Electron app If you are using discord on MacOS or Windows 10, you may have the official app installed. You may notice that sometimes Discord doesn't open too quickly or works very slowly if you have a lot of other applications open. If you're using a laptop, Discord will also drain your battery life as if there's no tomorrow. That's because Discord is hungry for RAM, but why? Electronic apps, such as Discord, are a type of program that works from the same web browsing engine that Google Chrome uses. When you install them, it basically Chrome again (yikes) on your computer, even if you already have Google Chrome installed. If you're using both Chrome and Discord, it's like running two browsers at the same time. It's really inefficient and both applications use RAM as crazy. Although Although may not look like your browser, the Discord app is running on Google Chrome's Chromium engine. I forgot to explain the RAM. Random access memory, or RAM, is what your computer uses to quickly store information and data for programs currently running. The more RAM capacity your computer has, the better the capacity of the device. So why does Discord use an Electron app for MacOS and Windows? The main professional behind the use of Electron is compatibility. It's easy to make changes to the code and push those changes to a wider variety of devices. So thumbs up for this, but thumbs down for optimization. The simplest way to make Discord work better is to close other apps to help you run faster. However, this is not ideal if you are trying to multitask or chat with others while playing a video game. You may need a device with more RAM in this case. My quickest fix is to use only Discord in a web browser instead of downloading the bloated Electron app. However, this trick only works for Windows and Mac. Corrupted Files: Discord probably needs to be restarted If you suspect that there are corrupted files at the root of the problem, you may need to uninstall and reinstall Discord. You can also try to more quickly clear the application cache, but if that doesn't work, reinstalling the app should cause Discord to open again. Let's get to work The rest of this article will go through each device step by step to help you if Discord doesn't open. You may want to jump to the device with which you are having problems. That is, unless troubleshooting steps on devices you do not use to fascinate you. Discord: Open! Congratulations! You have discord to open! That wasn't so bad, was it? Now you can hang out with your friends and Wumpus again! If you haven't been able to open Discord, well, then that's a little weird, isn't it? Leave a comment below and we can try to help you push it in the right direction. Thanks for coming by! If this article helped you, please let me know with a comment and share this article with someone else who may be having trouble making Discord work on your device. Trust me, you're probably not the only one! Are you encountering problems opening and using Discord on your Windows 10 PC? Well, if your answer is YES and you want to solve this problem, then stay on this page and read it to the end carefully. You can even find solutions to other common discord problems in this post. Thanks to useful features like Keybinds, Priority Speaker and YouTube/Twitch Integration Discord it has now become a primary source of communication for the gaming community. Amid the COVID-19 pandemic, it is also being used by various educational organizations and businesses. Unfortunately, many users are unable to open Discord in Windows 10. In addition, some users get stuck on the connection screen while using Discord. To Stop you, we've listed some of the best fixes for these problematic errors. RELATED: 10 best ways to fix discord screen sharing audio not working error how to fix discord doesn't open? 1. Close the discord and restart your computer The first best solution for Discord not to open may sound a little ridiculous, but it works. Simply closing the discord and restarting the computer can fix the problems associated with Discord. When you restart your computer, it automatically fixes various configuration problems and all unnecessary programs are also closed. After restarting your computer, relaunch Discord. Alternatively, if you want to kill the background discord processes without restarting the computer, open the Command Prompt and enter this command line. taskkill /F /IM disagree.exe Finally, hit enter and relaunch Discord. If all goes well, you may be able to use Discord now. 2. Check for discord server issues generally, even after opening successfully, Discord gets stuck on the connection screen. If you are having such a problem, then instantly check whether or not there is a stoppage problem. Problems and contention server outages make it impossible to access the service. These issues and server status can be tracked in status.discordapp.com. The red and yellow bars on the server status page show major and partial outage. Discord even shares maintenance announcements on this page. If there is a problem on the Do discord server, then you can't do anything instead of waiting for Discord to officially fix it. 3. Repair corrupted system files Repair corrupted system files using SFC can also fix discord will not open problem. To repair corrupted system files, open the Command Prompt by typing CMD in the star search menu on your Windows 10 PC. Typing the sfc/scannow command line will automatically scan and fix corrupted system files on your Windows device. Once the process is complete, close the Command Prompt and open Discord. 4. Delete AppData and LocalAppData The next best method after which you can fix unable to open the Discord problem is by deleting AppData and LocalAppData from Discord. You can delete the data from the local Discord application by following these simple steps. First, open the Run dialog box using the Windows + R Next up keyboard shortcut, type %localappdata% and click OK Find and delete the folder called Discord. Similar to the local app data, the app data can be deleted by following the steps and typing %appdata% in the Run dialog box. After deleting the Discord folder relaunch Discord and verify that it is being or not. Sign in with Discord Web Open any browser of your choice and log in to the official Discord website ( ). Then close the browser and launch the Discord app on your PC. If all goes well, discord can start normally on your PC. BONUS METHOD 6. Update the discord app as you you know, Discord developers run into the bugs of this messaging service regularly. Upgrading to the latest version of Discord can fix discord will not open bug. You can follow these simple steps to update Discord. First, open the Run dialog box using the Windows + R Next up keyboard shortcut, type %localappdata% and click OK Find and open the folder called Discord. Double-click Update.exe and relaunch Discord after the upgrade process is complete. I hope Discord opens normally on your Windows PC. Also, you can even uninstall and reinstall Discord. Finally, upgrading to the latest version of Windows can also fix the problem. RELATED CONTENT If you use Discord regularly, this Discord-related content may help you. CONCLUSION We hope that so far the Discord application does not open in the Windows 10 problem may have been fixed. If you have found any other solution to fix this error, then share it in the comments section below. When Discord doesn't open, you lose all the functionality provided by the desktop and mobile apps, such as pushing the entire system to talk, so it's important to get it up and running again as soon as possible. The most common issue that prevents Discord from launching is that it never shuts down until the end in the first place. When you close discord, it sometimes leaves a remaining process running in the background. This prevents the application from opening again until you kill the process. Other issues can also prevent discord from opening, such as internet connectivity issues, a virtual private network (VPN), and proxy mismatch, incorrect system settings, and even corrupted data in your temporary files or in the Discord app itself. If you're having trouble opening Discord, follow these steps to make it work again. Force get out of discord task. When you close an application such as Discord, it is possible for parts of the application to continue running in the background. You won't see Discord in the taskbar or system tray, but a remnant of it may still be running. When this happens, it is impossible to open a new copy of Discord without first getting rid of the remnant. From the Windows task manager, look for any Instances of Discord, select them, and then click End Task. If you're using discord on macOS, you can use Force Quit to get rid of a faulty instance of Discord. You can also kill the Android app if you're having problems with Discord on Android. For discord issues on Android and iOS, restarting your device can also help. Delete temporary files. Corrupted temporary files may discord app opens and works normally. To fix this problem, you'll need to delete all files from the AppData and LocalAppData folders. Try the web version of Discord. Navigate to discord.gg and log in. If the web client works great then there's probably a problem with your internet internet In this case, there is more likely to be a

problem with the Discord application on your computer. If the web client doesn't work, however, you probably have a problem on the internet. Disable your VPN or proxy. If you're using a VPN or connecting to the internet through a proxy, this can prevent Discord from working. To rule this out, disconnect from the VPN or disable your proxy, re-establish your normal internet connection, and then verify that Discord works. If this happens, try swapping the VPN server to which you connect or try different proxies. To disable or disconnect from a VPN, use your VPN app. To disable proxies on a Windows computer, go to the Control Panel &gt; Network and Internet Options &gt; Internet. Select the Connections tab and click LAN Settings. If the box next to Use a proxy server for your LAN is selected, uncheck it. Click OK and then Apply. Wash your DNS. If you are recovering from an internet connectivity issue or just shut down your VPN or disconnected from a proxy, then you may need to wash your DNS to see the results. Correct your date and time settings. If you have manually set the date and time of your computer, and your settings are not accurate, this may prevent the Discord form from working correctly. Instead of setting things manually, set their date and time to automatic. After you do this, restart your computer before attempting to open Discord. Scan your computer for malware. Malware can be designed to prevent certain applications and utilities from being released, and can also prevent applications from running as an unintentional byproduct or by using too much system resources. Using a high-quality antivirus or anti-malware application, scan your computer for infections and fix everything you find. Check for Windows updates. In some cases, running an outdated version of windows can cause unexpected application behavior. If this is the source of your problem, then downloading and installing any available system updates will fix the problem. Check for updates from Discord. Browse to discord.com/download and download the latest version of the software to your operating system. The installer must update your application if it is out of date. Uninstall Discord and perform a new installation. If nothing else works, then you'll need to uninstall the app, download the latest Discord installer, and reinstall it. If your problem was caused by corrupt data in the Discord app, it will make things work again. Since the Discord application is essentially just a wrapper for the web client, any interruptions in the can prevent the application from opening. This means that there may be a problem at the end of Discord that you will have to wait for them to come out, or you may have an internet connectivity problem. In that case, you should check if Discord is down for everyone, or if it's just you. Thanks for letting us know! Tell us why! Because! Because!
