Vietnamese coffee filter vs french press

Espresso technology is made using steam pressure, but then the technology is invented, and the espresso is built in a large and relatively expensive machine that can exert more than six times the amount of pressure of Moka Pot and create more espresso syrup with a thin layer of crema on top RANDOM NOTES: This creates too much pressure and can lead to excessive extraction, creating bitter or burnt coffee. It is important to keep an eye on the moga pots during the final stages. The flame should close when the top room is filled with half the coffee to avoid burning the coffee. If you hear a sound, this is a boiling water indicator, which is what you want to avoid. Boiling, accelerating, extracting and releasing unwanted and bitter flavors BEAN BUYING HABITS Our dedicated coffee drawers are well stocked with Intelligentsia and La Colombe coffee beans, and the appearance of guests, including nuts collected during our trip. During our recent trip to Tofino, B.C. We visited to roast tofino coffee and stock up on their dark coffee beans and Pacifica. All photos by Moss (except bad break) one)
