Transforming linear functions worksheet kuta

This ensemble transformation journals are aimed at helping high school learners gain an understanding of the transformation of linear function and its graph. Searches the $f(x)$ of the converted function $g(x)$ shown. Basic translation knowledge, such as horizontal displacement and vertical displacement; reflection, horizontal/vertical stretches, and horizontal/vertical compressions are needed to solve these transformation worksheet pdfs. Several free printable worksheets are available for practice. Print Help – Please do not print worksheets that have a grid directly from the browser. Please download them and print them. Translate function: horizontal/vertical offset In this suite of pdf conversion journals, apply a translation for each linear function $f(x)$ and find a new translated function $g(x)$. Follow the relevant rules $f(x) + c/f(x) - c$ to make a vertical shift c units up/down and $f(x + c)/f(x - c)$ to make horizontal shifts to c units left/right. Reflection of linear function Find a reflection of each linear function $f(x)$. Reflection on the x -axis should indicate a negative sign in front of the whole function, i.e. $-f(x)$. Overrides the independent variable x $f(x)$, over y -axis for mirror image. Transformation: Vertical or horizontal stretching/compression To find vertical stretching or compressing, function $f(x)$ is multiplied by the given factor and horizontal stretching or compression by multiplying the independent variable x by the interaction of the given factor. Use the appropriate rules to perform the correct conversions. Translation: MCQs In this suite of high school printed conversion journals, test your understanding of how to translate graphs. Each grid has two graphs: the original graph $f(x)$ and the translated graph $g(x)$. Locate the correct vertical or horizontal offset. Free Algebra 2 Worksheets Stop Searching.
