Cps science fair student handbook

Chicago Public Schools Chief Education Officer LaTanya McDade joined partner organizations and more than 250 students from across Chicago Friday at the opening ceremony of the 68th Annual Academy Awards. The STEM Student Research Exhibition is an action weekend of student presentations on topics from astronomy to zoology. The opening ceremony was held Friday at the Museum of Science and Industry, 5700 S. Lake Shore Dr. More than 400 jurors will evaluate and score each project and exhibition, at the conclusion of the awards ceremony on Sunday. The top 45 projects will be announced and these students will advance to the Illinois Science Fair April 27. Student presentations represent critical connections between science, technology, engineering and mathematics. The public screening is Saturday, 9:30 a.m. - 3 p.m. and the awards ceremony is Sunday from 1-3 p.m. More information can be found on www.cpschifair.org. Since the 1950s, the Chicago Public School Student Science Fair, Inc. (SSF), a non-profit organization that promotes the annual science fair, has provided opportunities for CPS students to engage in STEM research and their work evaluated by professionals in specialized fields at the urban, state and international level. To promote career and college readiness, SSF has awarded more than 2,120 scholarships to students from 75 Chicago public high schools totaling more than \$3,600,000. From science fair handbook: Confirmation process 1. Plan your project. check the rules. Projects including humans, microorganisms, recombinant DNA and vertebrate tissue most likely require confirmation. Carefully read the CPS Science Fair Confirmation Flow Chart. This will explain if you need to ask for confirmation. The flowchart and all the necessary confirmation files are attached below. If you need confirmation from a human test subject, make sure you click here to read the requirements for using people in experimentation. 2. Request confirmation = Ask for permission to make sure that the proposed project using humans, vertebrates or potentially dangerous biological agents is safe, the SRC (Scientific Review Committee) must review project details regarding safety risks and safety measures before the student begins the experiment. On the application form, the student explains the potentially dangerous aspects of the proposed project and what measures are in place to prevent damage. Two copies of the completed confirmation application form must be submitted to the SRC by October 28, 2011. 3. The review of the SRC project plan shall review the procedures and security measures on the application form. If the project is safe, the SRC signs the form stating that it approves the project. With this signature, the application form becomes a confirmation. If the project is not safe, the SRC will contact the student to inform problem and that the project is not approved to start experimentation. At this time, the student and the SRC can discuss safe alternatives. The student can then submit a new request for confirmation with the necessary revisions. The SRC sends back one of two endorsements to the teacher/sponsor via GSR. The signed clause must accompany a summary of the student's research at all scientific fairs. The second copy will be stored in the SRC records. 4. Confirmation, then experiment When a student has an SRC-signed student certificate then they can start the experiment as it has been ensured to be safe for the student, the subjects tested and the public. Disqualification Projects that violate any of the rules for the use of humans, vertebrates, microorganisms, rDNA or vertebrate tissue will be disqualified from the CPS Student Science Fair. The purpose of the approval process is to detect and solve dangerous projects, and breaking the rules in front of a student threatens someone. If your project needs confirmation and doesn't have one, it won't be able to attend the science fair. If an unapproved project accidentally progresses at a school fair or regional fair, it will not be able to be exhibited at the city's science fair. From the cps science fair website: cpsscifair.orgSuce requests must be made before experimentation to ensure the safety of the test subject(s) and/or scientist. The project plans shall be reviewed by the Scientific Review Committee and, where safe, approval shall be granted and the experiment may be carried out. Permission to perform an experiment cannot be granted to the one that has already been completed. See actions that users manage and post content to. Skatīt visu See what some of the brightest young people in our city have explored in areas from aerospace to zoology. About 300 Chicago Public School students whose science projects have been selected from school fairs and subsequent fairs in the area are now coming to the Museum of Science and Industry for this weekend's citywide science fair. The projects will be open for viewing museum guests at selected times from Friday to Sunday (see summary of hours). The weekend culminates on Sunday afternoon with the final grant meeting. The projects awarded at this fair will be presented at the Illinois Junior Academy of Sciences State Science Fair. Admission to the Chicago Public School Student Science Fair is part of the museum's entrance. Item.
