Eddie bauer wooden high chair tray

Click the image to change the design of the room Image not available in Color: Website: djgusa.comEddie Bauer offers a mash-up here: a hybrid wood chair with a plastic tray. Yep, in the category everything old again new, the Eddie Bauer Classic 3-in-1 high chair (\$125-\$140) combines the wood look with plastic convenience. So what are the compromises? Well, you can forget about many features that you will find in plastic chairs - Eddie Bauer's chair lacks wheels, height adjustment, seat back and more. The reader's feedback on this chair has become very negative since it first debuted. At first, Eddie Bauer's wooden high chair had a full cushion that covered the entire seat; later, the design of the pads changed to a smaller size, showing more wood. We speculated that the last edition would make it harder to clean (more food would get into the wood) and we were right- negative reviews shot up after design change. It's pretty out of the box, but it's impossible to keep that way, said one reader, who summed up the frustration of many parents. Food sticks to the dark wood decoration, slats on the side of the seat, almost everywhere, and it is impossible to clean. The finish also comes out, say others, indicating Cosco cut some corners here. Most are concerned about recent quality complaints that contain screws that fall out; unmatched screw holes and other troubles. Bottom line: Eddie Bauer wood high chairs are not recommended. We will not read our multi stage rating until we get more feedback. Rating: F An error occurred while processing the request. An error occurred while processing the request.
