Turn the auto knob – you've programmed your timer! pre-formed mounting holes.software: Illustrator CS2Printers are responsible for the requirements. Any changes marked specifications cations fi nished: in 9 d: 0 h 7© 2007 Fluid Studio. This work is owned by Fluid Studio and cannot be used, duplicated, or distributed Use the included mounting template to hang timer on a bolt using a keyhole. Connect one of the two wires from each valve to the common cable leading to the timer (usually white). Connect the second wire from each valve to one of the colored wires leading to the timer. To store the program in memory one CR2032 lithium battery (included) is required. An annual replacement is recommended. Remove the plastic strap to activate the note: The Quick Start Guide makes it easy to get started with the new timer. Includes basic installation and programming assistance. For more detailed and advanced instructions, instructions, download the full outdoor swing panel timer manual in • Turn the auto knob and press the [RAIN DELAY]• Press [+/-] button to select 24, 48 or 72 hours. • Press [ENTER] to start. Press [CLEAR] to cancel the rain delay. The clock has the ability to allow manual water without interfering with programmed programs. To start all stations at the programmed duration• Press [MANUAL]. A B and ALL appear on the display. • Press [ENTER] (or wait a few seconds) to start watering manually. All stations will be watered sequentially by the programmed duration. To start a specific station for a certain period of time• Press [MANUAL]. • Press [] until the desired station number appears. • Press [+/-] to enter the desired duration. • Press [ENTER] (or wait a few seconds) to start manual watering. To stop manual watering, press [CLEAR]. Note: After pressing the [MANUAL] button, if the selection is not made within 5 seconds, all stations and programs will start watering with the programmed travel time. If no running times are set, nothing will happen and the display will return to the time when the clock requires a CR2032 lithium battery to maintain the program in the event of a loss of AC power. Tip: The battery should be replaced every year to avoid loss Note: The battery itself will not support valves in the sprinkler system. The sprinkler timer must be connected to the For Budgeting Water Manual, connecting the timer to the Pump Start relay, replacing the Backup Battery or installing the timer outdoors, download the full Outdoor Swing Panel Timer manual at www.orbitonline.com 1-800-488-6156 or 1-801-299-5555Before returning this sprinkler to the store, Contact Orbit Technical Service at: 1-800-488-6156, 1-801-299-5555.Sprinkler clock is tested according to UL60730 & is ETLAppropriate international models are CSAThis Class B digital apparatus is compliant with Canadian ICES-003. Input: 120V, 60Hz, 0.2A; Output: 26V, PULSE VOLTAGE SOOMARATED: 2500V The power cord of this controller can only be replaced by the manufacturer or its accredited service agent. is a registered trademark of OrbitProducts, Inc. The information contained in this manual is intended primarily for the user who establishes a watering schedule and enters that schedule into the sprinkler timer. This product is intended to be used as an automatic sprinkler for the activation of 24 VAC irrigation valves as described in this manual. Irrigation Products, Inc. guarantees its customers that its products will be free from defects in materials and workmanship for a period of six years from the date of purchase. We will replace the defective or parts found to be defective in normal use and servicing for up to six years after purchase (proof of purchase required). We reserve the right to right to inspect the defective part before irrigation of Products, Inc. is not responsible for any incidental or incidental costs or damages caused by liability for the product under this warranty, limited to the replacement or repair of defective parts. To benefit from the warranty, you must return the device to the reseller using a copy of this device that complies with Part 15 of the FCC Regulations. The operation is subject to the following two conditions: (1) This device must not cause harmful interference, and (2) The Device must accept any interference received, including interference that may cause a Warning: Changes or modifications to the device that have not been expressly approved by the party responsible for compliance may invalidate the user's rights to operate the device. NOTE: This device has been tested and found to comply with the restrictions for Class B digital devices in accordance with Part 15 of the FCC Rules. These limits are intended to provide adequate protection against harmful interference in a residential installation. This equipment generates, uses and can emit radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in your case If this device causes harmful interference to the reception of radio or television, which can be determined by turning the device off and on, the user is encouraged to attempt to correct the interference by one or more of the following measures: • Change the orientation or position of the receiving antenna. • Increase the separation between the device and the receiver. • Connect the device to an outlet on a circuit other than the one to which the receiver is connected. • Consult your dealer or an experienced radio and TELEVISION technician for assistance. Note: This device is not intended for use by young children or unsupervised insemi adults. Young children should be supervised to make sure they are not playing with the device. • Turn the dial to set the date to enter the year, month and day. • Use the (+/-) button to select Year • Press [ENTER] to go to month and day. • Turn the dial to set the start time. • Enter one start time using the (+/-) button. • Press [ENTER] to save. Note: Additional start times – Additional start times can be entered if you want sprinklers to water the same area several times a day. Instructions can be found in the outdoor swing panel timer user manual in www.orbitonline.com. sources up to RESETRAIN DELAY cablingControl your automatic irrigation system by installing this orbital internal and external sprinkler clock. Note: Additional start times – Additional start times can be entered if you want sprinklers to water the same area several times a day. Instructions can be found in the outdoor swing panel timer user manual in www.orbitonline.com. Written by Brian Barth; Updated december 14, 20181 Nelson Sprinklers Manual Auto Sprinkler Control2 Instructions3 Customize K-Rain Sprinkler Heads4 Nelson Pop-Up Sprinkler AdjustmentOrbit sprinkler valves are designed for irrigation systems and are controlled by a computerised timer. Manual operation is also possible when it is necessary to test the valves after repairs or sprinkler maintenance checks. Since a normal irrigation cycle can occur when you are not at home, manual operation gives you a chance to make sure everything works smoothly. The valves can be operated manually from the timer or standing at the valve. Turn the knob to Auto and press manual to test the valves on the Easy Dial and Easy Set Orbit clocks. Each valve will be activated in order for the time it is set. To test a single valve, use the arrow keys to go to the desired zone and press +/- to set the duration of the test. Turn the knob to Auto position and move the slider switch for the desired valve to manual on position to test the valves on the Individual Station Slide orbit clocks. To test all valves in order, simply press the Manual button and press enter. Check that the selected valves are manually enabled. If the valve is not turned on, check the wiring and electromagnet to find the problem. Press the Clear button to stop the manual watering cycle at any time, or move the switch to Manual off for single prosusking station models. If the valve does not turn off, contamination inside it is probably the cause of the problem. Unscrew the electromagnet and valve cover, remove the inner parts and rinse them. Once again, you can seduit the valve and test again. Rotate the electromagnet in half a counterclockwise direction to turn the valve manually if it is a model with a lever marked on/off at the base of the electromagnet. The electromagnet is a cylindrical device at the top of the valve. If the electromagnet does not have an on/off lever, turn the bleed screw counterclockwise in half to turn the valve on. It is a black plastic screw at the top of the valve below the electromagnet. Be careful to see which irrigation zone is on. If nothing happens and the water can not be heard running through the valve, there is a problem with the water supply. Find the main valve that supplies water to all individual valves and turn it on. Observe each sprinkler in the zone to see if it sprays in the right direction. To adjust the spray direction, capture the elongated risep and rotate it to spray if necessary. If the spray distance is incorrect, adjust it with a screw at the top of the sprinkler head - clockwise reduces spraying and counterclockwise increases spraying3d sensitivity. Why download Unity using YepDownload?. Unity Simple & Fast Download!. WikiExt monitors and provides up-to-date your database to keep you up-to-date and the latest programs to open any type of file at all times. Unity latest version!. Works with all versions of Windows (64/32 bits)!. It is recommended that before making any changes to the system registry, you must perform a backup copy of the registry and any valuable data. For greater flexibility and convenience, use the orbit remote control system. Apple iphone facetime download. At the touch of a button, the valves can be activated from anywhere in the yard.
